PREFACE

TO THE FIRST EDITION.

SEVERAL works, more or less resembling the present one, being already in circulation, it is necessary to state why the Publishers have ventured to expect a share of the public favour for a new Biographical Dictionary.

To many of these Dictionaries, considered as the production of individual writers, a degree of merit, far from slight, must, in fairness, be conceded; but it would seem sufficiently evident, that no single scholar, however extensive his attainments, could ever be expected to catch, or even appreciate all the points of interest belonging to the numerous and varied classes of lives, which must be included in a General Biography. The necessity of seeking a combination of apt and effective talent, for the right production of any comprehensive Dictionary, has long been recognized in the case of our great 'Encyclopædias;' and such a combination was obtained for the service of Biography, by the editors of the voluminous 'Biographie Universelle.' But the principle has not hitherto been applied in the construction of any work of the latter kind, which would be portable and adapted for general circulation.

The volume now issued aspires to be a first attempt in the important direction alluded to. The Publishers have desired to intrust the execution of the principal lives of each class of remarkable men, to practised writers, who have cultivated the corresponding departments of Learning; and from whom they had therefore reason to expect biographical notices, really characteristic, and of assured value.

In the departments appertaining to History, Politics, Law, Military science and art, and Ecclesiastical affairs, valuable assistance has been obtained from Sir Archibald Alison, John Hill Burton, Professor Creasy, Professor Eadie, Professor Ferguson, and the Editor. The latter has also endeavoured to delineate the peculiar character and services of the leading Mystics.

Classical authors are treated by Professor Ferguson. Theological and Religious literature was given in charge to Professor Eadie and Dr. Jamieson. Poets, Novelists, and other great Men of Letters, are described by Professor Spalding: a memoir of Shakspeare comes from the pen of Charles Knight; and notices of the Bards of Scotland from James Hedderwick and Thomas Davidson.

The principal names in the department of the Mathematical and Physical Sciences were intrusted to Sir David Brewster and Professor Nichol. In the Experimental Sciences, the department of Chemistry has been treated by Dr. R. D. Thomson; that of Natural History by Dr. Baird; and Applied Science by Professor Gordon.

PREFACE.

The distinguished names in Medical Science are treated by Mr. M'Connechy. The eminent Geographers have been attended to by Mr. Bryce, who has endeavoured, by considerable research, to give exact information on the discoveries made by great travellers.

In Mental Philosophy, our volume is chiefly indebted to Professor Nichol, who has furnished a *résumé* of the doctrines taught by many of the Founders of the great schools, under their respective names. To render this department more complete, the Editor has ventured to introduce the name of Sir William Hamilton, although, happily for science, that distinguished Metaphysician still labours amongst us.

The list of articles written by Professor Eadie in Theology and Church History, includes the Fathers and Reformers, besides many of the mediæval Divines and Schoolmen. Dr. Jamieson's catalogue is graced by the names of our modern Divines, Missionaries, and Philanthropists.

In the department of the Fine Arts, the great Painters, Engravers, Sculptors, and Architects, are characterized by Mr. Wornum, whose exact acquaintance with the literature of these subjects is well known. The same may be said regarding the Musicians, under charge of Mr. Manson; and of the great Actors, whose lives have been written by the dramatic writer and critic, Mr. Heraud.

In a work so varied in its contents, so closely printed, and produced by so many hands, the Editor is conscious that there must be error; and that to many readers, the space will appear unequally divided. Perfection in all respects is not pretended to; but it is certainly hoped, that the design of the work, and its general execution, entitle it to be regarded as a step of the right kind in furtherance of popular literature. It has been his aim to allot sufficient space for a satisfactory—however brief—memoir of all the leading or *representative* men in each department; room being provided, by limiting those of lesser note to a chronological notice, or brief description. It will be found, that many thousand names are contained in this volume more than in any other portable Biography; and among novelties, may be mentioned the names of sovereigns, and ancient families of importance, arranged in complete lists. The advantage of such lists to the reader of history, will be obvious: many of them have been collated with great pains, in order to the removal of current discrepancies.

The volume is further enlivened by numerous illustrations of the birth-places, monuments, or other memorials of departed greatness; all copied from the most authentic sources.

ABELARD, PETER, (ABAILARD, PIERRE,) one of the most illustrious of the mediæval schoolmen, was born in 1079 of a noble family, at Palais, near Nantes in Brittany. The stirring incidents of his chequered life, and especially his renowned attachment to Heloise and its melancholy fruits, have thrown a peculiar and romantic charm round the name of Abelard. From his youth he devoted himself to study, and throughout his whole career he was at no pains to conceal his conscious possession of superior ability. His first teacher was Rosceline. Coming to Paris at the age of twenty, and having soon rivalled and eclipsed his tutor, Guillaume de Champeaux, he removed in two years from Paris to Melun, thence to Corbeil, and thence to Palais, his birthplace, teaching philosophy all the while with great success. The attractions of Paris soon drew him again to the

metropolis, where he attacked the Realism of his old master with such dialectic dexterity and vigour, that Champeaux's school was speedily extinguished. By and bye his antagonist was made bishop of Châlon-sur-Marne, and Abelard commenced to study theology under Anselm at Laon. Having by his transcendent talent made the seminary at Laon his envious enemy, he returned to Paris, and opened a School of Divinity with unrivalled popularity. In that school were trained many men, from various countries, who afterwards arrived at high ecclesiastical honours—one pope, nineteen cardinals, and above fifty bishops. In this zenith of his fame, when, according to his own confession, pride and luxury had seduced him, he fell in love with, and seduced his pupil, Heloise, a young and fatherless lady not over twenty years of age, and a niece of canon Fulbert, one of the Parisian ecclesiastics. Heloise was conveyed to Brittany, and bore a son in the house of Abelard's sister. The canon insisted upon a marriage, which accordingly took place, a union which Heloise openly denied, to her uncle's great vexation. Abelard next placed her in the convent of Argenteuil; but her uncle took a terrible revenge for the abduction of his niece, by means of some hired ruffians who broke into Abelard's chamber, and inflicted on his person a disgraceful mutilation. Heloise on this took the veil and became a nun, and Abelard retired as a monk into the Abbey of St. Denis. At length he resumed his prelections, but had the misfortune of being suspected of heresy, and was condemned in 1121, by a council which met at Soissons. Disgusted with the persecuting and exasperated monks of St. Denis, for he had denied their St. Denis to be 'Dionysius the Areopagite,' he retired to Troyes, and selected a retreat which his subdued and chastened spirit named the Paraclete, or Comforter, and in this convent Heloise was at length established as superior. But the unfortunate recluse next provoked the ire of his neighbour, Bernard of Clairvaux, and again for suspected heresy did the council of Sens put its brand upon him. He appealed to Rome, but did not follow out his appeal. Worn out with fatigue, persecution, and infirmity, he at length took refuge in the priory of St. Marcel, where he died 21st April, 1142, at the age of 63. His body, first interred at Cluni, was soon removed to the Paraclete; and twenty years afterwards Heloise was buried beside him at her own request. Their ashes lay undisturbed for 300 years; but in 1497 they were transferred to the church of the abbey; then in 1800 removed to the garden of the Musée Français, in Paris; and lastly, in 1817, they were deposited beneath a Gothic shrine in the cemetery of Pere la Chaise.—The brilliant talents and oratory of Abelard are beyond dispute. As a subtle and accomplished dialectician he had no rival. His 'Conceptualism' forms an epoch in the history of mind, and gave a salutary impulse to the age in which he lived. In his 'Theologia' we discover a vigorous and original mind, often hampered by its position and ecclesiastical subordination, but often asserting its native freedom and untrammelled right, as, for example, in his illustration of the mutual provinces of reason and faith. In his book on Ethics, which he quaintly

called 'Scito te Ipsum,' he opposes the Romish doctors on many points of morality; and in his other Treatise, 'Sic et Non'—'Yes and No,' he exposed their boasted uniformity of doctrine, and produced in a series of 157 rubrics, the contradictory opinions of the older teachers of the church. His works were published at Paris in 1614; and at the same place in 1836, Cousin published 'Ouvrages inédits d'Abailard.' [J.E.]

ABERCROMBY, PATRICK, a Scotch historian, physician to James II., died 1726.

ABERCROMBY, SIR RALPH. This gallant and skillful soldier, and upright and humane man

was born at Menstrie, in the county of Clackmannan in Scotland, in October, 1734. He entered the army at the age of eighteen, and saw some service during the last part of the seven years' war in Germany. He was not employed in the American war; and it was not until the war against revolutionary France broke out, that the important part of Abercromby's career commenced.—He acted as lieutenant-general to the Duke of York in the campaigns in Holland, from 1793-5. Abercromby's promptitude and courage, and also his good sense and humanity, were greatly signalized during these unfortunate operations of our troops; and both foreigners and fellow-countrymen noted the contrast which his skill presented to the incompetency of the other leaders of our army at that period. At the end of 1795 Sir Ralph was appointed commander-in-chief in the West Indies, and conquered several islands from the French. He was sent to Ireland as commander of the forces, during one part of the Irish rebellion, but his disgust at the system sanctioned there by the government, caused him to make indignant remonstrances, which were answered by his recall. He served again in Holland as second in command to the Duke of York, in the disastrous expedition to the Helder in 1799; and he again acquired the respect both of friends and foes, by his good conduct amid the imbecile blunders of those who were associated with him in command. But it is from the expedition to reconquer Egypt in 1801, when he was placed in unfettered authority at the head of a British army destined for a worthy object, that the lustre of his fame is dated. Sir Ralph reached the Egyptian coast in March, with a force of about 12,000 effective men. The French army that occupied Egypt, under General Menou, was much stronger; but Menou, though aware of the approach of the English expedition, detached only part of his force, under General Friant, to oppose the landing of Abercromby's army. Abercromby placed his men in boats on the 8th of March, and made good his landing, though he was met by Friant's troops with a heavy cannonade; and the English, as they reached the beach, were fiercely and repeatedly charged both by the cavalry and the infantry of the French. Abercromby then moved upon Alexandria, where the chief force of the French was posted. A slight action took place on the 13th, in which the English had the advantage; but it was on the 21st that the decisive battle was fought which liberated Egypt. On that day General Menou attacked the British with the whole disposable force that he could concentrate upon their position. He had from 12 to 14,000 troops in the field, a large proportion of whom were cavalry; and his artillery was also numerous. Abercromby had about 10,000 foot, and only 300 horse. He was also far inferior in guns. The battle, (which the English call the battle of Alexandria, and which is termed by French historians the battle of Canopus,) began about an hour before daybreak, and raged with unusual obstinacy till a little before 10 A.M. The French troops were all veterans of Napoleon's army of Italy; they attacked with impetuosity; and the English, who had the fullest confidence in their chief, resisted with their national stubbornness. Our right wing rested on the ruins of some old Roman

buildings; and this point was the key of our position, and the especial object of the French assaults. Abercromby rode to this spot, and encouraged his men by voice, gesture, and example. On the other side, Lanusse, the best of the French generals, led on the assailing columns. Lanusse was shot dead, and his columns driven back, but they soon rallied and returned to the charge; and a splendid division of French cavalry, under General Roize, galloped forward upon the English infantry that was posted near the Roman walls. Sir Ralph was attacked in person by some of these daring cavaliers, and the brave old general, though he disarmed his first antagonist, received a sabre wound in the chest from another French trooper, who was instantly shot down by a Highlander of the 42d. Soon after this Sir Ralph received a musket shot in the thigh; but he refused to quit the field until the enemy were thoroughly repulsed, and he saw them flying from the field, which was strewn with 1,700 of their killed and wounded, and also with nearly 1,400 of the victorious English. When the excitement of the battle was over, Sir Ralph fainted and was carried off the field in a hammock, amid the blessings and tears of the soldiery, who loved him as a father. He was immediately carried on board Lord Keith's flag ship, where he died of the gunshot wound in his thigh, on the evening of 28th March, 1801, in the 63d year of his pure and honourable life. [E.S.C.]

ABERNETHY, REV. J., an Irish dis., 1680-1740.

ABERNETHY, JOHN, (1763-1831,) a celebrated surgeon. A native of the north of Ireland, he was educated in London, where his parents are said to have resided. He became a pupil of John Hunter, by whom he was thoroughly imbued with a determination to devote his remarkable energies to the reform of the mode of practising the profession to which he was devoted. By his master he was admirably instructed in the organization of the human body, and his career is a brilliant example of the successful application of his early knowledge to the legitimate treatment of disease. It was in combating the empirical tendencies of his predecessors that he perhaps became rather dogmatical in his manner, which, although it rendered him a favourite with his pupils from its eccentricity, produced enmity by its brusqueness. To a celebrated friend of the writer of this, who was familiar with him, he said, upon taking a patient to him, and commencing to explain the symptoms of the complaint, 'Hold your tongue, sir, what have you to do with it?' He became, at an early age, surgeon to St. Bartholomew's Hospital, and lecturer in its medical school. His most important works were on Physiology, on Surgery, and on the treatment of local diseases. His great merit was in pointing out the legitimate road on which to practise the profession, and in carrying out the principles of his great master, John Hunter, with amazing energy and determination. ABINGER, JAMES SCARLETT, Lord, an eminent English practising barrister and judge, was born in Jamaica about the year 1769. His family was eminent and influential in the West Indies, and his younger brother, Sir William Anglin Scarlett, became chief justice of Jamaica. He studied at Trinity College, Cambridge, entered at the Middle Temple, and was called to the bar on the 8th July, 1791, taking his degree of A.M. three years later. His practical sagacity, aided by a full, handsome person, which gave him, even in youth, an appearance of sedate importance, procured for him a rapid and lucrative business. His temper, discretion, and industry, were always to be relied on; and few English barristers, while yet junior counsel, have been intrusted with the sole management of so many important cases. There was nothing striking or inspiring in his eloquence, nor was he remarkable for original or profound legal views; but he had the most lucrative of all characters attached to his professional fame, that of getting many verdicts. A writer in the public press, signing himself 'Lorgnette,' who seems to have intimately studied his career, summed up his characteristics as a practical lawyer by saying:— 'Watchfulness, prudence in the management of a case, great moral courage in the choice or rejection of the means to be used on behalf of a client, experience of human nature, and great self-denial in the exhibition of that experience; these were the chief agencies by which he acquired his ascendancy over juries; while it is not surprising that he should have also acquired great influence over the bench, when he added intimate knowledge of the intricacies of law to an unusual personal preference for judges, and the prestige which almost unvarying success gave him.' He received a silk gown in 1816. He had before that date made unsuccessful attempts to get into parliament, where he first sat in 1818 for Peterborough, a nomination seat. He was one of the many eminent lawyers whose peculiar forensic powers have failed to please the House of Commons, and he was not much heard there except on professional matters. He had been an advocate of Romilly's law reforms, and was generally counted in the Whig ranks, but he took a distinct step in a gradual change,

by becoming attorney-general under Canning in 1827. When Sir Charles Wetherall was dismissed in 1829, for opposition to Catholic emancipation, Scarlett took a farther step by becoming again attorney-general under the Wellington administration, and he followed up his accession by severe prosecutions of the opposition papers. In 1834 he was made chief baron of the Exchequer, and raised to the peerage by the title of Baron Abinger. He died on 7th April, 1844, of paralysis, which attacked him when on circuit at Bury St. Edmunds. His first wife, married in 1792, died in 1829, and he was married a second time, a few months before his death. [J.H.B.]

ADAMS, JOHN, a celebrated American states-

man, the second President of the United States, was born at Braintree, Massachusetts, on 19th Oct., 1735. His fame is not associated with brilliant oratorical displays, or with critical triumphs in party conflict. His qualities were those of the accomplished man of business, but they came forth at a time, and under conditions that made business capacities of the most momentous importance to his own countrymen and to mankind at large. The United States are the sole great exception to the saying of Burke, that 'constitutions are not made, they grow.' That a constitution was framed for the States, on principles which have attested their soundness for the place and occasion by their durability, is mainly to be attributed to the sagacity of Adams, and especially to his thoroughly English capacity to turn existing institutions and habits to the new conditions of the people, instead of inventing untried novelties. Hence his friend and rival Jefferson, called him 'The column of Congress, the pillar of support to the Declaration of Independence, and its ablest advocate and defender.'—Having studied at Cambridge, Massachusetts, he joined the Suffolk bar in 1759, and practised in Quincy. He married, in 1764, Abigail Smith, a woman of great ability and high patriotic aspirations, who brought to him the influential local connection of the Quincy family, to which she was related. Adams dated his expectation of the coming revolution, and his preparation to participate in the reorganization of government in British America, to what he observed in 1761, when the question of the legality of writs of assistance, under the English exchequer system against the Boston merchants, was tried. His first open advocacy of colonial independence was in the support of the application of the Boston citizens to have the courts of law reopened, when they had been closed on the ground that their proceedings were informal without the use of that cargo of stamps which had been forcibly detained by the citizens. He showed his thorough independence, and brought on himself considerable odium by becoming counsel for the soldiers charged with murder for shooting citizens of Boston.—In 1774, when Gage dissolved the assembly of Massachusetts, he was one of the five who, before separation, were appointed to meet with other committees of Washington, and he was thus instrumental in the construction of congress. On the 6th of May, 1776, he took the first step in the declaration of independence, by a prominent motion 'to adopt such a government as would, in the opinion of the representatives of the people, best conduce to the happiness and safety of their constituents and of America.' He was one of the committee for preparing the celebrated Declaration. He had, in the meantime, organized the system which gave its war-service to the United States, and had been chiefly instrumental in putting the army into the hands of Washington. By his management of the committee of correspondence, he organized another great branch of service, that of the foreign department. He was one of the commissioners appointed to treat with France and Holland, and afterwards was sent to negotiate the treaty with Britain. In 1789, he became vice-president, and on the retirement of Washington, in 1797, he was chosen president of the United States, remaining in office

for one period of four years. He was all his life, more or less, concerned in public business, and lived to a good old age. The juncture of his death was remarkable: it occurred in 1826, on the 4th of July, the anniversary of the declaration of independence. Before breathing his last, he made the remark, 'Jefferson survives;' but it was not so—Jefferson had died at an earlier hour on the same day. [J.H.B.]

ADAMS, JOHN QUINCEY, an American statesman, the son of John Adams, was born at Braintree, Massachusetts, on the 11th July, 1767. He received his name of Quincy from his maternal grandfather, an influential citizen of the colony, who died just as his celebrated grandchild was born. Adams was cradled in the revolution, and when but nine years old heard the first reading of the declaration of independence from the old state house in Boston. He accompanied his father in his missions to France and Holland, and there acquired the knowledge of foreign languages and countries, and the wide systematic views which made him invaluable to a country in which such qualifications were necessarily rare. He took a degree at Harvard with high distinction in 1787. In 1791, under the signature of 'Publicola,' he suggested some grave doubts about the soundness of the principles actuating the French revolutionists, very remarkable as the production of a republican pen. In 1803, he was sent from the state of Massachusetts as representative to the senate in congress, and sat until 1808. He had been for a short time professor of rhetoric in Harvard, when, in 1809, he was appointed representative of the States at the court of Russia, and began his brilliant and multifarious diplomatic career. In London he completed the negotiations for the conclusion of the second British American war. He was called home in 1817, to serve in the cabinet of President Monroe. On the election of a president in 1825, the name of Adams was returned with those of Jackson, Crawford, and Clay; but as there was not for any one candidate the majority of electoral votes required by the constitution, the selection fell into the hands of the representatives who chose Adams. He retired in 1829, declining the party advocacy, which it was said might ensure his reelection, and he has been looked back on with regret as the last of those who occupied the chair without being borne into it by a victorious faction. In 1831 he began a career of valuable services as a member of the House of Representatives. He made many enemies by his sympathy with the cause of negro emancipation. He was an active pamphleteer, and contributed to periodical literature. He died, full of years and honours, on the 23d of February, 1848, and it has been customary to speak of him as the last of the old and higher class of American statesmen. [J.H.B.]

ADANSON, MICHEL, a celebrated botanist, was born at Aix, in Provence, in 1727, died in 1806. He was educated at Plessis, studied in Paris under Reaumur and Bernard de Jussieu at the Garden of Plants, and afterwards made a voyage to Senegal. He remained in Africa five years, and during his sojourn there collected an immense number of plants and animals. Upon his return to France, he found that Linnæus had already promulgated his artificial System of Nature to the scientific world. To Adanson this arrangement, and the arbitrary nomenclature of Linnæus, were particularly distasteful. His grand aim was to produce a classification of the objects of nature, based upon the natural relations which these have one with another. The first work in which he proposed this method was his 'Voyage to Senegal,' in which he made an attempt to classify the mollusca according to the structure of the animal, and not the shell which they inhabit. The next was his 'Families of Plants,' in which he strove to carry out the same principles in botany as he had commenced in conchology. He has not been very successful in this attempt, as a comparison between his system and that of Linnæus will show; but still, along with his teacher, Bernard de Jussieu, he has the merit of indicating a method of arrangement of plants by their natural affinities, in opposition to the artificial system then in vogue. He possessed a great knowledge of botany, and was an accurate observer. He is the author of a very interesting account of the immense tree called by the natives of Africa the Baobab; since named after him *Adansonia*. He wrote also an account of the trees which produce the gums of commerce. At the revolution, Adanson was reduced to great poverty, but afterwards received a small pension from government. His will directed that a garland of flowers, selected from the 58 families of plants which he had established, should be the only decoration of his coffin. [W.B.]

ADDISON, LAUNCELOT, father of the celebrated writer, and dean of Lichfield, was early distinguished by his attachment to the Stuarts. He is the author of several works; 1632-1703.

ADDISON, JOSEPH, was the eldest son of a clergyman, able and learned, but not wealthy. He was born in 1672, at the rectory of Milston in Wiltshire. He was educated chiefly at the Charter House and at Oxford, and distinguished himself as a writer of Latin verses, a good many of which were afterwards published. He first appeared in print by contributing English verses, some of which were original, and others translations from the classics, to Dryden's collections of miscellaneous poems. Another of his poetical efforts was a poem complimenting king William on the campaign in which he took Namur. It was written after he

had been introduced to the notice of leading statesmen of the Whig party; whose patronage of him, prompted by their expectation of his usefulness in political life, appears to have been the cause of his abandoning the intention he once had of entering the church. A pension, procured for him by the interest of Lord Somers, enabled him, in 1699, to visit the continent, where he resided for three years. The best of his poems, a 'Letter from Italy,' addressed to Lord Halifax, his earliest patron, was written in 1701, while he was still abroad; and his 'Travels in Italy,' the first large work which he attempted in prose, exhibited very promisingly both his classical and miscellaneous knowledge, and his skill and liveliness in composition. Not very long after his return to England, he wrote, on the suggestion of the prime minister Godolphin, 'The Campaign,' a poem celebrating Marlborough's victory at Blenheim. He immediately received an appointment as one of the commissioners of excise, the place having become vacant by the death of the celebrated Locke; he was speedily promoted to be an under-secretary of state; and he was secretary to the lord lieutenant of Ireland in 1710, when the ministry which he served was dismissed from office. —The time of his steadiest and most successful activity in literature embraced the four years extending from this loss of place to the end of Queen Anne's reign. The Tories being in power, he was excluded from public employment. But, a short while before this, he had begun to produce those periodical essays by which his fame has been longest and most securely preserved. In 1709, he began to furnish papers to the *Tatler*, which was conducted by his schoolfellow and friend, Richard Steele. Early in 1711, these two writers com-

menced the *Spectator*, which was continued every week-day till the close of the following year. It was then dropped, after having made up the 555 numbers commonly printed in its first seven volumes; Addison and Steele contributing almost equally, and together writing all the essays except sixty or seventy. In the course of 1713, the *Guardian* received a large number of essays from Addison: and then also appeared his celebrated tragedy of 'Cato.' The immense popularity which, partly through political considerations, this stately drama gained, both among readers and among playgoers, raised the reputation of the author to its highest point. During the latter half of the year 1714, he contributed a good many papers to the new series of the *Spectator*, making up its eighth volume. —The accession of George I., occurring a little before the publication of the *Spectator* was closed, restored the Whigs to power, and thus again diverted Addison from literature to politics. After having acted as secretary to the regency, he was appointed one of the lords of trade. Down to this point in his history, there seems to have been really no good ground for the allegations commonly made of his inefficiency as a man of business. He had, indeed, failed in parliament, having either not spoken at all, or broken down in the only attempt he made. His literary celebrity, however, and his modesty and urbanity of manners, though they might have procured him a reception into the society of persons of rank, could not have obtained and preserved the confidence of successive statesmen if he had not been quite competent to the practical details of office. But it cannot well be doubted that he was unfit, though it had been only through his inefficiency as a debater, for the last step which he ventured to take on the ladder of ambition. In 1717, a dissension having occurred in the ministry, Townsend and Walpole, the ablest members of the cabinet, passed over to the opposition: and in the administration which was formed by the other Whigs, Addison became a principal secretary of state, having Lord Sunderland, Marlborough's son-in-law, as his colleague. His acceptance of this office is commonly attributed to the influence of his wife, the Countess-Dowager of Warwick; whom he had married a few months before, and who is said to have, by her haughtiness and violence, made her husband unhappy, and to have driven him to dissipation as a means of escape from domestic discomfort. That Addison did become sottish in the last years of his life has not been clearly proved; and one is glad to catch at any reasons for disbelieving it. At all events, his health was now giving way; and the state of it was made the excuse for his resignation of office, which he tendered in April, 1718, after having held it for less than a year. His only subsequent efforts in literature that are worth noticing were, an angry controversy with his old friend Steele, who had joined the opposition section of the Whigs, and his uncompleted treatise on the 'Evidences of Christianity.' He died at Holland House, in Kensington, in June, 1719, a few weeks after having completed his forty-seventh year. —Addison's poetry is of very small account. His minor compositions in verse hold but a low rank even in that didactic and half-prosaic school to which they belong. 'Cato' itself owed its fame, in a great mea-

sure, to extrinsic circumstances: and it could not have been successful at all had not dramatic art been then in a state of decay. It is a series of dialogues rather than a drama: its speeches, often eloquent, and almost always morally noble, are ædum truly poetical, and never passionate or pathetic: and there is an equal feebleness in the incidents and in the characters. It must be allowed, likewise, that no very great value belongs to any of his prose writings, except his contributions to the *Spectator* and other periodical papers. These, however, make up a large mass of literary compositions, and possess distinguished merit and importance. In the history of English style, a marked epoch is constituted by the appearance of the writers who are oftenest described as the Wits of Queen Anne's time: and among these there were none who exerted, on the manner of later authors, so strong an influence as Addison. His grace and refinement, accompanied by an admirable command of familiar idioms, gave him a charm that was wanting in the bare and stern writings of Swift: and he was superior to Steele, not only in these points, but also in his comparative freedom from looseness and inaccuracy, and in his power of rising to dignity without losing ease or freedom. In respect to matters higher than style, the merit of the Periodical Essays is chiefly shared between Steele the projector, and Addison, the only other steady and active contributor. In those sketches of character and manners, and those fragments of invented stories, which were the most popular things in the *Tatler* and its successors, Steele showed more decisive originality, and greater breadth and force of humour: but his coadjutor excelled him by far both in delicacy of sentiment, and in the skill, ingenuity, and consistency with which he worked up his materials into finished pictures. To Addison the *Spectator* owed, with hardly any exception, its papers of a more elevated and solid cast, those which made it an instrument of enlightenment to its contemporaries, and entitle it to the grateful attention of posterity. Such were its critical dissertations, always abounding in good taste and eloquent expression, the best of these being the criticisms which did so much for recalling notice to Milton: such were the papers on the 'Pleasures of the Imagination,' (efforts highly meritorious in the circumstances,) towards ascertaining the principles on which philosophical criticism must be founded: and such, also, were many meditative and religious papers, some of them purely didactic in form, and others allegorical, and all of them excellent alike for their high ethical tone, and for their natural and fine reflectiveness. If Addison's prose writings were once overvalued, the neglect and depreciation with which it has lately been fashionable to treat them, involve an error which goes at least as far the opposite way.

In 1757 he was compelled to take a part against Prussia in the 7 years' war, though he was some years previously married to a sister of Frederick the Great. Intrigue and dissension marked the whole period of his reign, and though a party in the state made strenuous endeavours to extend the royal prerogative, the king exercised little real power. The state of the country at his death in 1771, is represented by a native historian as a picture of the extremest anarchy that a state can reach under a representative government. [E.R.]

ÆSCHRION, an ancient physie. of Pergamos.

ÆSCHYLUS, a celebrated Greek dramatic writer, was born of a noble family at Eleusis in Attica, B.C. 525, and died at Gela in Sicily, B.C. 456. From an anecdote which is related of him by Pausanias, it appears that his youthful fancy was early captivated by the exhibitions of the drama; and he accordingly devoted his life to the service of the tragic muse. At the age of twenty-five, B.C. 499, he first presented himself at the festival of Bacchus as a competitor for the public prize; and fifteen years afterwards, B.C. 484, gained his first victory. The pre-eminence which he thus acquired was successfully maintained till B.C. 468, when he was defeated in a similar contest by his younger rival, Sophocles; an event which exercised a strong influence over the rest of his life. Mortified at the indignity which, as he thought, had thus been put upon him, he quitted Athens and went to the court of Hiero, king of Syracuse. Of the remaining portion of his life but little is known, except that he continued to prosecute his favourite pursuit; and that his residence in Sicily was of some duration, may be inferred from the fact that it was sufficient to affect the purity of his language. His thirteenth and last victory was gained B.C. 458. On the manner of his death, which was singular, the ancient writers are unanimous. While sitting motionless in the fields, his bald head was mistaken for a stone by an eagle which happened to be flying over him with a tortoise in her bill. The bird dropped the tortoise to break the shell, and the poet was killed by the blow. Æschylus is said to have been the author of 70 tragedies, of which only seven are now extant. The improvements which he introduced in the economy of the drama, were so important as to gain for him the distinction of the Father of Greek Tragedy. To the single actor of Thespis he added a second, and thus presented the regular dialogue. He abridged the length of the choral odes and made them subservient to the main interest of the plot; substituted a regular stage for the moveable wain of his predecessor; provided appropriate scenic decorations, and dresses for the actors; and removed all deeds of murder and bloodshed from public view. His style is bold, lofty, and sublime, full of gorgeous imagery and magnificent expressions, suitable to the elevated characters of his dramas. His plays have little or no plot; and have therefore been blamed as deficient in dramatic interest. But Æschylus was illustrious not merely as a poet. Along with his brother Cynægirus he distinguished himself so highly in the battle of Marathon, B.C. 490, that his exploits were commemorated by a descriptive painting in the theatre of Athens; and it is probable that he took part in the subsequent battles of Artemisium, Salamis, and Plateæ. His warlike spirit is vividly portrayed in his tragedies, the 'Persians' and the 'Seven against Thebes.' [G.F.]

ÆSOP, generally known for the Fables attributed to him, lived in the 6th century B.C. His history is not well authenticated, but it is understood that he was born in Phrygia, and acquired his Greek education as a slave in Athens. He is regarded as the inventor of the apologue, of which his own compositions are also the purest models. They have been trans. into all modern languages.

He speedily turned to

[Birth-place of Akenside.]

medical studies, which he completed at Leyden, graduating there in 1744. In the same year appeared his well-known poem, 'The Pleasures of the Imagination.' This work not only has the unavoidable faults of all didactic poetry, but hovers in a middle sphere between fancy and philosophy, in a manner which makes it obscure and unsatisfactory, even to readers who are both poetical and metaphysical. But it contains some noble pictures, many trains of finely reflective sentiment, and not a few nice felicities of diction. His subsequent effusions in verse comprehended only a few very poor odes, some classically-conceived inscriptions, and a 'Hymn to the Naiads.' After having unsuccessfully attempted medical practice in the country, he removed to London, being aided by a pension from a wealthy and generous friend. He now busied himself chiefly

in professional pursuits, attaining some scientific eminence, but no large share of employment. He was a man of high respectability and integrity, but dogmatic and irascible; and his brother-physician, Smollett, ridiculed his pedantry in his description of the 'feast in the manner of the ancients.' He died in 1770. [W.S.]

ALARIC, a Saxon king, middle of the 6th cent.

ALARIC I., king of the West Goths, and conqueror of the Roman empire at the commencement of the 5th century, is one of the most remarkable characters in the history of those times. Before the appearance of this distinguished military leader, some three centuries of despotism and corrupt administration had reduced the one time mistress of the world to a deplorable state of baseness and effeminacy; while the warlike Goths, engaged in a border warfare with the Roman troops, and sometimes ravaging the provinces of the empire in return for the insults heaped upon them, and the suspicion with which they were regarded, were daily growing more formidable. The defeat of the emperor Valens had long since discovered to the 'barbarians' their superiority over the masters of the fertile provinces which spread so temptingly before them; yet their chiefs were kept in a willing obedience to Theodosius the Great, and their ambition was a long time satisfied by serving in the Roman armies. At length, A.D. 395, the death of Theo-

dosius, and the division of the empire between his sons Honorius and Arcadius, renewed the disgraceful intrigues which had been kept in suspense by his able administration. The public immorality and political baseness of the period were only equalled by the private vices of the degenerate Romans; and the conviction became general that nothing could avert the disorganization by which society was threatened. At this juncture the Gothic hordes were set in motion by a party inimical to the government of Arcadius in the east, and Alaric, whose wild ambition had been flattered by these overtures, commenced his famous march from the Danube. It is possible that his fortunes had been rising since the death of the Gothic king Athanaric, A.D. 381, but nothing certain is known of his early history save that he belonged to the princely family of the Balti, descended from the Asæ or demigods of Scandinavia. The course of Alaric at the head of his victorious troops was through Thrace, Dacia, Macedonia, and Thessaly, into Achaia, and everywhere the officers of Arcadius betrayed their trust, or refused to fight; while the most glorious monuments of Grecian art fell a sacrifice to these martial iconoclasts, whose name is still synonymous with that of destroyer. The emperor of the west, taking alarm at his unexampled successes, sent an army to the aid of his brother, under the command of Stilicho, by whom Alaric was kept in check, and prepared for terms of accommodation with a foe for whom he had no other feeling than that of contempt, 398. By the terms of the armistice—for it was really only an armed truce which ensued—the Gothic chief was acknowledged master of the Eastern Illyricum by the emperor of the east, who also declined the further assistance of Stilicho; and by his own followers proclaimed king of the West Goths, and of all the tribes who acknowledged their kindred or allegiance. Situated between the two empires, and subject to the continued hostility of the Romans, Alaric employed himself in perfecting the equipment and discipline of his troops, and after two years of preparation suddenly forced the passage of the Alps. His usual success attending him in a succession of battles and sieges, he was on the point of capturing Honorius, when, at the critical moment, Stilicho arrived with a levy of troops collected from Germany and the other barbarian provinces of the empire. The result was the final retreat of Alaric to his own government; but he had now measured his strength against the legions of Rome in the sunny plains of Italy, and had also come to a good understanding with Stilicho, a man of splendid abilities, and of a kindred origin with himself, though he was now the sword and buckler of the western empire. After the retirement of Alaric, Italy was invaded by a host of the Gothic tribes, commanded by Radagaisus, who were defeated by Stilicho, and distributed over the face of the country. Alaric was rewarded for the strict neutrality which he observed on this occasion by a rich present from the Roman senate; but he demanded a more fertile province for the settlement of his own people. While this demand was in agitation, Stilicho was basely murdered at the instigation of Honorius, whose tottering throne his arms and diplomacy had so long upheld, and who had grown jealous of his popularity—perhaps, also, of his

affinity with the powerful king of the Goths, and of the friendly understanding between the two leaders. The threatening attitude now assumed by Alaric, as the avenger of his friend, attracted the discontented of all Italy to his standard, and invitations from the court of Honorius were not wanting to excite him to the enterprise. He commenced his second march towards Rome in the year 405, and after a victorious progress entered the eternal city, its first conqueror in six centuries. On this occasion his extreme moderation, and perfect command of his troops, have won for him the applause of the most cautious historians—his exactions only amounting to a few thousand pounds' weight of gold and silver, and certain costly robes of silk and pieces of scarlet cloth. Retiring from the city to negotiate, he pitched his camp in the plains of Tuscany, but was drawn into Rome a second time by the perfidy of Honorius. He now deposed a sovereign with whom it was manifest no faith could be kept, and made Attalus, a much esteemed Roman præfect, emperor. The friends of Honorius, however, on the departure of Alaric, endeavoured to rally again; the new emperor was deposed; and the negotiations which Alaric set on foot at a distance from the seat of empire, proved fruitless. These events, in fine, brought the now angry conqueror of Rome for the third time into the midst of its doomed palaces and temples, and the city was given up to pillage. In all probability the nameless horrors of such a scene, infamous as the sack of Rome is represented, were not greater in degree than similar disasters which have occurred within the memory of man, and under the eye of more enlightened commanders. —The fall of Rome was followed by the desolating march of Alaric and his troops towards the coast, where he was preparing to embark for Sicily; but was surprised by a short illness, which terminated in his death, A.D. 410. His faithful followers prepared his grave in the bed of the river Busentinus, which they diverted from its channel for the purpose; and when the waters once more rolled in their accustomed course, the workmen were put to death, that no tongue might tell where the hero lay buried, with the choicest spoils of Rome to do him honour. [E. R.]

ALARIC II., was the ninth king in descent from Alaric the Great, and succeeded his father Euric, who had really added the Gothic monarchy of Spain to that of Gaul, A.D. 484. Alaric had the misfortune to ascend the throne at the critical period when the Franks, under the celebrated Clovis, were extending their dominions at the expense of the neighbouring potentates, and was weak enough to surrender Syagrius, the prince of Soissons, who had been defeated, and had taken refuge at his court, to the Frank king. The affronts to which he submitted seem to have chafed the proud spirits of his high-minded and chivalrous subjects, and the general discontent which it occasioned was aggravated by religious differences arising from the constantly increasing opposition of his bishops to the tenets of Arianism, always held by the Gothic kings. Under these circumstances his kingdom was invaded by Clovis, with the avowed design of extirpating the Arian heresy, and a battle being fought at Vouëlle, in which the two princes met in personal conflict, Alaric fell worthily by the

hand of his rival, A.D. 507. The body of laws which is known as the code of Alaric, was digested by order of this prince from those of Theodosius, and applied to the exigencies of his own people. After his fall, the arrival of his brother-in-law Theodoric, king of the East Goths, redeemed the honour of his kindred in the battle-field, and Clovis was compelled to accept terms of peace. ALBERTUS MAGNUS, or ALBERTUS GROS-TUS, was born at Lauingen, in Suabia, according to some in 1193, and according to others in 1205. It is said that in early youth he was singularly obtuse. But he soon displayed prodigious capacity, so that his immense and varied acquirements rapidly raised him to eminence. He studied at Paris, Padua, and Bologna; in 1222 he became a Dominican friar, in 1224 was installed provincial of the order, and was raised to the bishopric of Ratisbon in 1260. Cologne was the chief scene of his popularity and usefulness, though other cities had been at an earlier period privileged with his learned visits. But he had little relish for church preferment, and resigned his episcopal honours, in 1263, into the hands of Pope Urban IV. Thomas Aquinas was a favourite pupil of his, and the Albertists were a noted sect after their master's death, in 1280. The fame of Albert rests not on his genius, but on his multifarious erudition. He seems to have embraced the entire circle of knowledge. Not only did he lecture on Aristotle and his Arab commentators, Avicenna, and Averhoes, with mediæval acuteness and profusion, but his works comprise dissertations on Theology, Alchymy, Physical Science, Natural History, and Astronomy. His voracious mind had stored itself so vastly with the encyclopædic knowledge of his age, that his books are rendered comparatively useless by an incredible farrago of

references, quotations, and digressions. Still, his ardent pursuit of knowledge, and his patient attempt to present it in a connected and systematic form, must ever cause him to be regarded with peculiar veneration. His works, collected and published at Cologne, in 1621, fill 41 folio volumes, three of which are taken up with an explication of the 'Sentences' of Peter Lombard. [J. E.]

ALCIBIADES, a Christian martyr, 2d cent.

[Alcibiades—From an Ancient Bust.]

ALCIBIADES, the son of Cleinius, one of the most remarkable men of antiquity, was born at Athens about B.C. 449. He inherited from his parents the highest rank, with almost boundless wealth, and was endowed with a person unusually handsome, with manners the most fascinating, and with talents which would have raised him to the highest distinction independently of the advantages which fortune had bestowed upon him. Left an orphan at an early age, he was placed under the wardship of his relative Pericles; and became the favourite pupil and companion of Socrates. But his great qualities were marred by inordinate vanity and love of notoriety, which led him into wanton and offensive excesses; evil tendencies which the lessons of the philosopher failed to counteract. The stirring events of the Peloponnesian war, B.C. 431-404, could not fail to call into active operation the energies of a mind so ambitious and so unscrupulous; and accordingly, from his first appearance in public life, B.C. 421, when he prevented the truce between Sparta and Athens from being carried into effect, he made the interests of his country and his own reputation alike subservient to his schemes of ambition. In B.C. 419 he was chosen general, and during the next three

years took a prominent part in the complicated struggle of intrigue and war which was carried on in the Peloponnesus. In B.C. 415 he was the leader in advocating the Sicilian expedition, and shared the command with Nicias and Lamachus. Soon after the fleet set sail, an agitation was revived against him on the ground that he was implicated in the mutilation of the busts of Hermes, and his enemies succeeded in procuring his recall. The proud spirit of Alcibiades could not brook this indignity; and, therefore, instead of returning to Athens, he proceeded to Sparta, and becoming the avowed enemy of his country, disclosed the plans of the Athenians, and suggested the operations by which their measures in Sicily were defeated. Sentence of death was consequently passed upon him, his property was confiscated, and a curse pronounced upon him by the ministers of religion. Through his instrumentality an alliance was formed between the Spartans and Tissaphernes, satrap of Lydia, which led to the revolt of many of the Asiatic allies of Athens. But his influence at Sparta was not long maintained; in B.C. 412 he took refuge with Tissaphernes, and by his unrivalled talents soon gained his favour; and induced him to withdraw from his Spartan allies. Being again the open enemy of Sparta, Alcibiades now wished to effect a reconciliation with his countrymen; and entering into a correspondence with the leading men in the Athenian fleet at Samos, was pardoned and recalled by the soldiers, and appointed one of their generals. For the next four years he remained abroad, rendering important services to his country; and having, by the victories which he gained, re-established himself in public favour, he returned to Athens, B.C. 407, where he was received with great enthusiasm. His property was restored to him, the priests were ordered to revoke their curse; and as the crowning honour he was appointed commander-in-chief of all the forces by land and sea. But the fickleness of the Athenian character again displayed itself. In consequence of the defeat of the Athenian fleet at Notium B.C. 406, he was superseded in the command, and went into voluntary exile in the Thracian Chersonesus. After the establishment of the tyranny of the Thirty in B.C. 404, he was condemned to banishment. Upon this he took refuge with Pharnabazus, satrap of Bithynia, intending to proceed to the court of Artaxerxes, when one night his house was surrounded by armed men and set on fire. He rushed out sword in hand, but fell overwhelmed with missiles, B.C. 404, in the forty-fifth year of his age. [G.F.]

ALCUIN, or as he Latinized his name, FLAC-CUS ALBINUS ALCUINUS, was in all likelihood born at York about the year 735. Educated in the monastic school at York, under Egbert and Aelbert, both of whom afterwards held the see of York, he was promoted subsequently to be master of the same school, and taught in it till 780. Archbishop Eanbald sent him, in 781, to Rome, to get for him the pallium, and Alcuin, on his return, visited Charlemagne, at Parma. The emperor at once became deeply attached to him, brought him to his court, and heaped upon him honours and emoluments. At the court of Charlemagne, Alcuin was a general preceptor and counsellor. Ultimately he retired to Tours, where he died 19th May, 804. Alcuin was not only a distinguished scholar, polemic, and poet himself, but aided and directed his imperial master in patriotically diffusing through the empire the means of literary and theological education. He assisted at the councils of Frankfort and Aix-la-Chapelle, at which the errors of Felix and Elispandus on the person of Christ were condemned. Altogether he was the most distinguished man of his age. [J.E.]

ALEXANDER I., succeeded his father as king of Macedon, B.C. 501, died B.C. 451.

ALEXANDER II., the elder brother of Philip, the father of Alexander the Great, succeeded as k. of Macedon, B.C. 369. Assassinated B.C. 367.

ALEXANDER III., surnamed the Great, son of Philip, king of Macedonia, was born at Pella in the autumn of B.C. 356. In the short space to which we are necessarily restricted, it is impossible to do more than enumerate a few of the leading events in the life of this extraordinary man. In his fourteenth year, B.C. 342, Alexander was placed under the immediate tuition of Aristotle, and continued to receive his instructions till he was unexpectedly called to the throne. Under the superintendence of such a master the powerful mind of Alexander was rapidly developed, and enriched with stores of practical and useful knowledge. His physical education also was carefully attended to; he was trained to expertness in all manly exercises; and in horsemanship is said to have excelled all his contemporaries. When sixteen years old, B.C. 340, Philip, set-

ting out on an expedition against Byzantium, delegated to him the government during his absence. Alexander's first essay in arms was made two years later, B.C. 338, at the battle of Chæronea, by which his father established the Macedonian supremacy in Greece. The murder of Philip in B.C. 336, when about to march into Asia at the head of the combined forces of Greece, raised Alexander to the throne at the age of twenty; and involved him in difficulties from which the promptest energy could alone have saved him. Several of the Grecian states, still fretting under the effects of the battle of Chæronea, concerted measures for throwing off the galling yoke, but the vigorous promptitude of the youthful

[Alexander—From an antique Gem.]

sovereign frustrated their plans, and awed them into submission. The assembled Greeks at the Isthmus of Corinth, with the single exception of the Lacedæmonians, elected him as successor to his father in the command against Persia, thus virtually acknowledging him as their sovereign. Having now quelled opposition in the south, he turned his attention to the barbarians in the north, B.C. 335, and west, who had renounced their allegiance, and established his dominion from the northern limits of Scythia to the shores of the Hadriatic. Alexander now devoted himself to preparations for his Persian expedition; and, crossing the Hellespont in the spring of B.C. 334, gained his first victory over the Persian army on the banks of the Granicus, a small stream which falls into the Sea of Marmora. After reducing the towns on the western coast of Asia Minor, he marched to Gordium in Galatia, where he untied with his sword the famous Gordian knot, and thereby established his claim as the conqueror of Asia. Having been joined here by reinforcements from Macedonia, he proceeded through the centre of Asia Minor to Cilicia, where he nearly lost his life by bathing when over-heated in the waters of the Cydnus. His second engagement with the Persians took place on the plain of Issus, on the shores of the Gulf of Scanderoon, B.C. 333, and ended in the total defeat of Darius, who fled to the eastern bank of the Euphrates, leaving his mother, wife, and children in the hands of the conqueror. The

magnanimity of Alexander was honourably displayed in the delicacy and respect which he showed to his helpless prisoners. The battle of Issus decided the fate of the Persian empire; but before advancing in pursuit of Darius, Alexander judged it prudent to make himself master of Phœnicia, and especially of the towns on the coast. Tyre, after a siege of seven months, was taken, B.C. 332, and the inhabitants massacred or sold as slaves. Proceeding next into Egypt, he received the ready submission of the inhabitants, and founded the city of Alexandria at the mouth of the western branch of the Nile. In the spring of the same year, B.C. 331, he set out in quest of Darius; and proceeding through Phœnicia, Syria, and Mesopotamia, at length, in October, met with the immense host, said to have amounted to more than a million of men, on the plains of Guagamela, a village of Assyria, about fifty miles from Arbela. Darius, who was irretrievably defeated, fled to Ecbatana (Hamadan) in Media. Alexander, as the conqueror of Asia, now assumed the pomp and splendour of an Eastern despot; and proceeding to Babylon, Susa, and Persepolis, was received by the inhabitants as their undoubted sovereign. In the beginning of B.C. 330, he marched into Media in pursuit of Darius, who had there collected a new force, and, following him through the deserts of Parthia, had nearly reached him, when the unfortunate king was murdered by Bessus, satrap of Bactria. The magnanimous conqueror caused the body of his fallen enemy to be buried in the tombs of the Persian kings at Persepolis, and spent the remainder of the year in consolidating the conquests which he had already made. But uninterrupted success produced its usual effects upon the mind even of Alexander. Hitherto sober and moderate, he now became the slave of his passions; gave himself up to arrogance and cruelty; and in the arms of pleasure shed the blood of his bravest and most faithful generals. The next two years were spent in reducing under his sway the remaining countries of Central Asia; and in the spring of B.C. 327, he crossed the Indus, and entered into the country of the Punjab, where he met with no resistance till he reached the Hydaspes (Jelum.) On the eastern bank of this river he was vigorously opposed, but in vain, by Porus the native king. Still pressing forward, he crossed the Acesines (Chinab) and the Hydraotes (Ravee,) and was preparing to cross the Hyphasis (Garra) when the Macedonians, at last worn out by fatigue, refused to proceed; and Alexander, after using every effort to induce them, was obliged to lead them back. Returning to the Hydaspes, he there built a fleet and sailed down the river, receiving as he proceeded the submission of the inhabitants on either side. On reaching the confluence, he despatched a portion of his army into Carmania, and continued his voyage down the Indus, the mouth of which he reached about the middle of B.C. 326. He here committed his fleet to the care of Nearchus, and commenced his return by land to Persia, reaching Susa in the beginning of B.C. 325. In the spring of B.C. 324 he arrived at Babylon, which he intended to make the capital of his empire. But his boundless ambition was not yet satisfied. He commenced preparations for the invasion of Arabia; but, while cherishing this and other gigan-

tic schemes of conquest, was attacked by a fever in May or June B.C. 323, and died after an illness of eleven days.—The history of Alexander forms an important epoch in the history of mankind. Unlike other Asiatic conquerors, his progress was marked by something more than devastation and ruin; at every step of his course the Greek language and civilization took root, and flourished; and after his death Greek kingdoms were formed in all parts of Asia, which continued to exist for centuries. By his conquests the knowledge of mankind was increased; the sciences of geography, natural history, and others, received vast additions; and it was through him that a road was opened to India, and that Europeans became acquainted with the products of the remote East. ALFIERI, a Roman architect, died 1767.

ALFIERI, COUNT VITTORIO, descended of a family both noble and rich, was born in 1749, at Asti, in Piedmont. Left an orphan in childhood, he early displayed his self-willed obstinacy of character; and his education left him nearly as ignorant as it found him. At the age of sixteen he became the uncontrolled master of his fortune and his conduct; and for several years his career was one of restless wandering and dissipation. A love of horsemanship and horses was one of his two strongest passions: the other involved him in a series of profligate amours, of which the most scandalous had its scene in London. A love-affair, not at all more creditable, in which he engaged on returning to Turin in 1772, had the effect of awakening for the first time his poetical susceptibility and his ambition of literary fame. His qualifications for success were as unpromising as possible. He appears to have added, during his travels, little or nothing to the very small stock of knowledge with which he left school; and he never showed any aptitude for observation either of men or of other objects external to him. In point of language, he was even whimsically deficient. He had learned no Latin: the Italian dialect of his native province is hopelessly corrupt: and, while he was totally unpractised in writing, he spoke but indifferently even French, the language of the Piedmontese nobility and court. The young poet, inspired by the thirst for glory yet more than by his newly-awakened love of letters, set himself determinedly to vanquish all difficulties, by now educating himself. He learned Latin enough to put some of the classical writers at his command; and he studied assiduously both the Tuscan or literary dialect of Italy, and the principles of the drama, the kind of composition by which his fancy had been attracted. After bringing a play on the stage at Turin, in 1775, he took up his residence at Florence, for the study of the Italian tongue in a region where it is purely spoken.—In 1783, he published his first series of tragedies, the *Filippo*, *Polinice*, *Antigone*,

and *Virginia*. A second series of six tragedies, appearing afterwards, contained, among others, the *Timoleone* and the *Rosmunda*. In the third and last series, which embraced nine, were the two *Brutus*, the *Maria Stuarda*, the *Conspiracy of the Pazzi*, and the *Saul*, which contests with his *Filippo* the honour of being his best work. In the meantime, however, his studies suffered many interruptions; and he travelled much, chiefly that he might be near a lady to whom he had become attached in Florence. This was the Countess Stolberg, who derived the title of Countess of Albany from being the wife (ill-used and neglected) of the Chevalier Charles Edward Stuart. After the death of this unfortunate prince, in 1788, his widow and Alfieri lived together, and were understood to have been privately married. They were in Paris during the massacre of 1792, and, escaping with difficulty, resided thenceforth at Florence. Alfieri's literary employments were now prosecuted with increasing ardour; in his forty-eighth year he began to learn Greek, for the purpose of studying the Attic drama; and he wrote a large number of pieces, embracing satires in verse, a strange kind of political comedies, and his *Memoirs of his own Life*. He died in 1803, and was buried in the famous Florentine church of Santa Croce.—His character was exceedingly peculiar, and notwithstanding some fine and elevated points, cannot but be pronounced unamiable. Its most prominent features were an indomitable energy of will, which was shown by the whole of his literary career, a ceaseless craving for celebrity, and a boundless self-esteem, which exhibited itself in a reserved haughtiness of manner, and made him really a bigoted aristocrat at heart, while professing and supposing himself a violent democrat. Not less singular are his Tragedies, the works on which his literary fame depends. In their structure, they carry to the furthest possible extreme the unity and simplicity of the French drama of the seventeenth century. Their representation of character is monotonous and deficient in individuality, but sometimes very powerful, as in the portrait of Philip II.; and, in respect of sentiment, their strength lies in the gloomy and deeply tragic. The diction has, perhaps, more of vigour than any other works in the same language, though this excellence is gained at the cost of adopting a conciseness which is always rugged, and sometimes obscure; and the versification is as unmelodious as any combination of Italian words could be made. Altogether these are remarkable works, which cannot soon be forgotten, but whose literary merit will always be differently estimated by different critics. [W. S.]

ALFONSO I., surnamed the 'Catholic,' b. 693, elected king of Oviedo and Asturias, 739, d. 757.

ALFONSO II., called the 'Chaste,' succeeded as king of Asturias, 791, abdicated 835, died 842.

ALFONSO III., surnamed the 'Great,' b. 848, k. of Asturias 866, added the kingdom of Leon to his dominions, and was dethroned by his son, 910.

ALFONSO IV., surnamed the 'Monk,' king of Leon and Asturias 924, abdicated 930, died in a monastery, 933.

ALFONSO V., b. 994, king of Leon 999, prepared the way by his conquests and policy for the union of Castile; killed at the siege of Viseu, 1028.

ALFONSO VI. of Leon and I. of Castile, succeeded his father 1065, and added the latter kingdom to his dominions 1072, died 1109.

ALFONSO VII., the title assumed by **ALFONSO I.** of Arragon, from his marriage with the daughter of the preceding, and vainly contended for during a period of seven years.

ALFONSO VIII. (or the **VII.**, omitting the last named,) of Leon and II. of Castile, b. 1106, succeeded 1126, made himself chief lord of all Christian Spain, and assumed the title of emperor 1135, died 1157.

ALFONSO IX., called the 'Noble,' b. 1155, succeeded as king of Leon 1158, died 1230.

ALFRED, a Saxon prince, brother of Edward the Confessor, who met with a cruel death in an attempt to gain the crown, early in the 11th cent.

ALFRED, AELFRED, or **ALURED**, a celebrated Saxon monarch, is commonly called *The Great*, and has better merited that title, by eminent services to the world, than perhaps any other of the celebrated monarchs who have borne it. He is one of the men whose life forms an era, and thus, like Lycurgus and Charlemagne, his name is associated not only with the legislative improvements actually accomplished by him, but with many others which had an earlier origin, and came to maturity near the time of his reign. From the

propensity to attribute to him every early and beneficent feature in the English constitution, it is sometimes difficult to discover his actual achievements; while annalists and historians, anxious to provide an ample account of one so famous, have endeavoured to give particulars of so many events in his life which could not be ascertained, that it is difficult to separate the truth from the falsehood, and tell what is really known of him. It seems well ascertained that he was born in the middle of the 9th century; the year is stated as 849. He was the youngest son of Ethelwolf, king of the West Saxons. Giving promise of great capacity, his father gave him in his early youth opportunities of instruction by travelling twice to Rome, and living for some time in France; and there is no doubt that the knowledge thus acquired by him of a higher civilization, prepared him for the exercise of that beneficent influence over his people which enabled him to accomplish so many social improvements among them. While his elder brother, Ethelred, was king, they were both called on by the king of Mercia to assist him and his people against the Danish hordes overrunning the

[Alfred's Jewel.]

country, and oppressing the Saxon people. They conducted a long contest with varied success; but though conduct and leadership seem to have been on the side of the Saxon princes, the Danes had numbers and ferocity. At a battle near Reading, Ethelred received a mortal wound, in the year 871, and when he died Alfred succeeded him. He derived but gloomy prospects from the state of the country, deeming the triumph of the Danes inevitable, but with an energy and courage, which in spite of painful disorders never left him, he resolved to defend, step by step, the territories committed to his charge. A confused history follows, in the course of which it is said that nine great battles were fought in one year. The Danes, receiving ever fresh recruits from the continent, pressed him by degrees, until he ceased to command an army, or even a guard, and, wandering alone, found safety in a peasant's hut at Athelney, in Somersetshire. The old chroniclers tell a story so characteristic, that it has secured general belief, about

his being set by the peasant's wife to watch the baking of some cakes, and when—his mind far away devising projects for relieving his country from the invaders—he allowed the cakes to burn, the honest woman scolding him sarcastically as one ready enough to attend to the function of eating them, though he could not be at pains enough to watch them.—After he had been a few months in this retreat, he found means to gather some of his most trusty followers, and to make at last a small army, which harassed the conquerors, and gradually increased. There is a well-known legend of his preparing at last for a pitched battle with the leader of the Northmen, Guthrun or Gorm, and ascertaining beforehand the state and number of the forces, by penetrating the camp in the disguise of a harper. The battle which followed crowned a series of successes, and in the year 897 restored him to his throne. It was his policy not to attempt the extirpation of the marauders, but to christianize and civilize them, mixing them up with the other inhabitants of the country. The Danish chiefs, from fellow-kings, sunk to tributaries, and, in the year 894, Alfred might be said to be king of England. He had not been long at rest, however, ere the Danes, reinforced from the continent, and headed by a powerful leader, Hastings, drove him into a new and arduous conflict, which terminated in his favour in the year 897. In the meantime he built vessels, and trained men so effectively in maritime warfare, that he has been deemed the founder of the British navy. He confirmed and consolidated the Saxon institutions, which divided the country into grades of municipalities, making the several communities of citizens checks on each other's conduct, by being responsible for the offences committed within their respective communities. Thence he has been called the inventor of the arrangement of the country into shires, hundreds, and tithings, though he probably only regulated and confirmed what had been previously in existence. He has been called the author of trial by jury, but in our present understanding of the system, it was not in practice until long after his day. He was a great scholar and author, and translated Boethius on the Consolations of Philosophy, with other works, into Saxon. He died either in 899 or 900. The memoir of him, which bears the name of his contemporary Asser, was long deemed a genuine life, but its authenticity has of late been doubted. [J.H.B.]

ALI, IBN HAMMUD, founder of a dynasty in Cordova and all Moham. Spain, 10th century.

ALI, PACHA, of Jannina, was born about the year 1750, at the little fortified village of Tepelenë, in Albania, in European Turkey. Ali's family belonged to one of the Albanian tribes that had long embraced Mahometanism; and his ancestors for some generations had been chieftains of Tepelenë.—Ali's father had been stripped of the greater part of his possessions by a confederacy of the neighbouring chiefs; and when the old man died of a broken heart, Ali was but a boy of fourteen years. But Ali's mother, Khamko, survived, and was a woman of remarkable energy. She successfully defended Tepelenë, the last remnant of her son's heritage, against his father's foes: and to her example and influence, much both of the vigour and of the ferocity which characterized Ali in after years, may be attributed. As the lad grew up, the mother trained him to make glory and revenge the sole objects of his existence. He collected a small band of armed followers, and made repeated forays into the lands of his hostile neighbours. Sometimes he sought adventures and booty alone, as a common freebooter, or Klephtis, according to the modern Greek title.—Ali's early youth was passed in this adventurous manner; and many of the vicissitudes that he encountered are far more romantic than any novelist ever invented. By the time that he was twenty-four, he had recovered the greater part of the hereditary territories of his family; his wealth and his retainers were increasing rapidly, and his fame as a military chief was spread throughout Albania, and the neighbouring provinces.—He now began to intrigue for promotion and influence at the sultan's court; and lavished his treasures for that purpose in bribes among the leading members of the divan at Constantinople. Partly by these arts, and partly on the strength of the more creditable claims which he acquired by doing good service at the head of a body of Albanians in the war of 1787, against Austria and Russia, Ali obtained official rank and favour from the sultan. He was made pacha of Tricala, in Thessaly, and soon held other appointments; but his great object was to obtain the pachalic of Jannina, in southern Albania, and by audacious craft and bribery, he succeeded in this in 1788. Jannina thenceforth was the capital of his dominions.—Ali proved almost invariably an overmatch for the other pachas who entered into rivalry with him. He sometimes put them down by open force, but he more frequently ridded himself of such adversaries by secret assassination, or by sowing calumnies against them at the sultan's divan. The suppression of the little local chiefs, and the subjugation of the independent towns and tribes in Albania, was a task of more difficulty. In particular, the tribe of the Suliotes resisted him with the noblest courage; and called into activity against them that fiendish

vindictiveness which was a leading feature in his character. Many years passed away before it was gratified; and Ali sustained from the Suliotes more than one humiliating defeat. By degrees this heroic race was overpowered, and in 1802, the garrison of their last stronghold was massacred, after a war in which Ali sullied himself by the meanest perfidy, as well as by the most blood-thirsty barbarity.—Ali extirpated the robber-chiefs who (as he himself had done in his youth) infested the mountain passes of Albania. He crushed the local independence of the chiefs, and made his authority practically as well as nominally supreme over their hereditary jurisdiction. His dominions were made as orderly, and as secure for the merchant and the traveller, as those of any European potentate. He enriched Jannina and his other cities with stately buildings, and secured them with fortifications. He encouraged and protected foreign merchants. He sternly enforced a complete equality of the members of all religious creeds. Swift to discover, and merciless to punish all crimes, save his own, he gave Albania a degree of tranquillity and prosperity, such as the country had never enjoyed since the days of its ancient Epirote princes.—Ali Pacha watched with eager interest the wars that raged through European Christendom, after the breaking out of the French revolution. His great object was to make himself master of an ample and compact dominion, which was to include Albania, the Ionian isles, Macedonia, Thessaly, and the whole of Greece.—He obtained possession of the city of Prevesa, and other towns on the mainland, but he could not gain the Ionian islands, though he entered into a long series of intrigues, alliances, and hostilities with the French and their enemies, in succession. But though unable to realize the magnificent scheme which he had formed, Ali was for many years a prince of high power and renown, whose favour was courted by the statesmen of European as well as of Asiatic courts.—Had the late sultan Mahmud been as imbecile as were his immediate predecessors, Ali Pacha would, in all human probability, have closed his career in prosperity and peace. But sultan Mahmud was resolute to reform the anarchy of his kingdom; and his proud spirit chafed at the idea of permitting his authority to be bearded by a vassal like Ali, whose insubordination was so imperious, and so notorious throughout the world. A pretext was soon found for assailing him, and the sultan proclaimed Ali a rebel, and all faithful Mahometans were ordered to destroy him. The war between the pachas who marched at the sultan's bidding, and the old pacha of Jannina, commenced in 1820. At first Ali had the advantage; but sultan Mahmud inspired his lieutenants with some of his own spirit. Many of Ali's strongholds were wrested from him—the greater part of his troops deserted him—his sons made terms with the enemy, or were slain; and before the end of 1820, Ali was closely besieged in Jannina. It was in vain that he bribed the sultan's ministers: Mahmud declared that any person who spoke in behalf of Ali should be put to death. Other sums of money were sent from Jannina to Greece, with the view of raising an insurrection, and drawing away the besieging army to suppress it. The Greek war of independence was thus fomented, and some of the

Greek chiefs endeavoured to assist Ali in Albania, but the Turkish troops steadily pressed the siege of Jannina. At last Ali treated for a surrender: and, by a piece of retributive justice, he who had destroyed so many by first granting, and then violating treaties of capitulation, now became the victim of a similar fraud. Khurshid Pacha, who commanded the besiegers, by giving a solemn pledge that the sultan's pardon for Ali had been granted, induced Ali to surrender, and then had him put to death, though not till after the old man had defended himself desperately, and shot three of the soldiers who were sent to slay him. The gray head was cut off, and sent to Constantinople, where sultan Mahmud received it with his own hands, and exhibited it in grim triumph to the members of his divan.—Ali Pacha was killed on 22d February, 1822. ALLEY, REV. JEROME, LL.D., a theological and political writer, 1778-1826.

ALLEYN, EDWARD, a celebrated actor of the 16th century, the companion of Shakspeare, and a benefactor to learning and his country, as the founder of Dulwich College, was born in London, 1st September, 1566. It is probable that he was introduced to the stage through his mother's second marriage with a haberdasher and player, named Brown, and it is certain that he had a joint share with him and one Richard Jones in certain 'playing apparels, play books, instruments, &c.' In 1592 Alleyn married Joan Woodward, step-daughter of the theatrical manager, Philip Henslowe, and in conjunction with his new relative undertook the management of the Rose Theatre, Bankside, for a short season. After their separation Alleyn appears to have visited the provinces by himself, but in 1600 they united again to build

bulls, and dogs, exhibited at Paris Garden, which they rebuilt in 1606. In the same year Alleyn purchased the manor of Dulwich from Sir Francis Calton, and ten years afterwards, the death of Henslowe left him sole proprietor of their various speculations, to which he had already added a share in the Blackfriars Theatre, supposed to have been Shakspeare's interest in it, purchased in 1612. A career like this betokens a prosperous and clever man, and accordingly he was known by his contemporaries as 'famous Ned Alleyn.' In Ben Jonson's estimate, he was equal to the great actors of Rome, and seems most to have excelled in majestic parts. Greene's 'Orlando Furioso,' and Marlowe's 'Jew of Malta,' are mentioned as characters of his. The burning down of the Globe and Fortune Theatres turned the current of his fortunes; but before this reverse he had delighted in acts of benevolence, and sequestered all his lands to the college, designed for the support of one master, one warden, and four fellows, three of whom were to be ecclesiastics, and one a skilful organist, and also of six poor men, six women, and twelve boys to be educated in good literature. After some legal difficulties the patent passed the Great Seal on the 21st June, 1619, and on the 13th September following, Alleyn having formally and publicly dispossessed himself of all property in the foundation, entered it with his wife as inmates of the establishment and equals of those for whose comfort and elevation it was intended. He still, however, continued master of the king's games; and his diary represents him as occasionally baiting before the king at Greenwich. It was during his residence in the college, indeed, that the Fortune Theatre was burned down, which he forthwith rebuilt. Having lost his wife in 1624, Alleyn married again, and expired himself on the 25th November, 1626; by his will endowing twenty almshouses, ten in the parish of St. Botolph, and ten in St. Saviour's, Southwark, besides leaving considerable legacies to his widow and relatives.—The motive to these various acts of munificence has been superstitiously ascribed to the circumstances of Alleyn having been surprised by the apparition of the devil in one of his performances; but no intelligent reader will pay the slightest regard to so absurd a story. There may have been some vanity—the player's peculiar fault—in the transaction; since Alleyn manifested a partiality for people bearing his own appellation, and directed that the master of the college should always be of the name of Allen or Alleyn. This situation is now of great value; the revenues of the foundation being large. The college is also rich in works of art, Alleyn himself having left a considerable number of pictures, and Sir Francis Bourgeois in 1810 having bequeathed to it his valuable collection. Papers in the handwriting of Alleyn and Henslowe are also among its treasures. Alleyn's diary, which has been published by the Shakspeare Society, is particularly instructive touching the condition of the dramatists of the time. For the most part, they were exceedingly poor, and the remuneration paid for their works was very small. Those who, like Shakspeare and Alleyn, had the theatres in their possession, profited largely by the prevailing taste; but the workers in the mines of the drama laboured hard in obscurity for the pre-

carious means of subsistence; and some of the details of their difficulties may be gathered from this most interesting document. From these difficulties Shakspeare was exempt; a fact which sheds a light on his character and condition to which sufficient attention has not been paid. The greatness of the poet was in fact doubtless due to his favourable position as an actor and manager; how this was attained is a point on which some explanation is yet desirable. [J.A.H.]

ALVA, FERDINAND, duke of Alva, (or Alba, as it is sometimes called,) stands unenviably prominent in the history of the 16th century as the sternest instrument of the sternest crowned bigot of that age.—Alva was born in 1508, of one of the most noble families in Castile; he entered the army in early youth, and served with distinction in the greater part of the wars of the emperor Charles V., both in Europe and Africa. He was looked on as the first in ability and in honour among the emperor's generals; and when Philip II. succeeded to the throne of Spain on Charles's abdication, Alva continued to be the great military duke of the council and the armies of Spain.—He acted as Philip's plenipotentiary in concluding the treaty of Chateau Cambres in 1558, which was not a mere pacification between France and Spain, but a league of the Roman Catholic powers for the extermination of Protestantism. Alva was henceforth the frequent and confidential adviser of the most violent Romanists in France; and there is little doubt but that it was in pursuance of his exhortations at the interview between him and Catherine of Medici in 1565, that the hideous massacre of St. Bartholomew was planned and perpetrated.—The Netherlands, (including both modern Holland and modern Belgium,) formed a valuable part of the vast dominions which Philip had inherited. The Reformed doctrine had made great progress there, and Alva urged on his sovereign the duty of extirpating heresy in every part of his kingdom, by the same system of merciless persecution which had been employed with seeming success in Spain itself. In 1567 Philip determined on this fatal policy, and ordered Alva to lead a veteran army

into the Netherlands, giving him powers which superseded all the ordinary governors and magistrates of the provinces. At the head of 20,000 chosen troops, Alva now commenced his reign of terror at Brussels. He formed a council of 12 of his most unscrupulous and merciless officers, which he called the Council of Troubles, but which soon acquired, and deserved, the name of the Council of Blood. The council had unlimited power over the properties and the lives of the Netherlands. Every one who was charged with heresy or disloyalty, was dragged before this tribunal, which dealt out confiscation, torture, and death, throughout the unhappy country. Tumults soon followed, which gave a pretext for letting loose the ferocious soldiery on the wretched inhabitants; and the Spanish troops were permitted, and even encouraged by their commanders, to practise an amount of licentious brutality and fiendish cruelty, such as cannot be read of without shuddering, and which excited general horror even in that age of religious wars. Alva's avowed maxim was that the king would rather see the whole country a desert, than permit a single heretic to live in it. By treacherously pretending great favour and respect towards the counts of Egmont and Horn, two of the principal chiefs of the Netherlands, he succeeded in getting these noblemen into his power, and then arrested them and put them to death after a mock trial. The other national leader of the provinces, Prince William of Orange, more wisely distrustful of Alva, kept away from his court; and when the maddened population of the northern provinces took up arms against the intolerable tyranny of Spain, the Prince of Orange became their chief, and levied an army in Germany, with which he sought to rescue his country from Alva. This was the commencement of the glorious Dutch war of independence, which was maintained for 68 years, and ended in the separation of the seven united provinces from the dominion of Spain. In the first five years of that war, which passed before Alva's recall from his command, he fully displayed the high nature of his military talents in battle and in siege, and still more in the cautious skill of his manœuvres. But the spirit of resistance which he had aroused was unconquerable. He was ill seconded by the Spanish court; and his troops, ill paid and ill supplied, grew insubordinate and mutinous. Alva was recalled in December, 1573, after a command of six years, during which he boasted that he had brought 18,000 persons to the scaffold, besides the almost countless numbers that had been massacred at Haarlaem, and other revolted cities which his troops took by storm, and those also who perished under the unrecorded acts of wanton cruelty which the soldiery were allowed to practise throughout the unhappy country. In 1582 Alva was once more employed by his sovereign, and led the expedition against Portugal.—The aged general completely conquered that country in ten weeks, and placed its crown on Philip's head; an acquisition which might seem to counterbalance the calamitous war in the Netherlands. This was the last act of Alva's long and active life, for he died in the same year, at the age of 74. [E.S.C.]

AMBROGI, TESCO, an Orientalist, 1469-1540.

AMBROSE, SR., son of the prætorian præfect of Gaul, was probably born at Treves about 340.

His father died when Ambrose was but a boy, but he was well educated, and being possessed of great rhetorical powers, he soon rose to high eminence as a forensic pleader at Milan. At the death of bishop Auxentius, in 374, there was intense struggle and conflict between the Catholics and Arians about a successor, and Ambrose, as *Conular*, happened to deliver a peaceful oration to the people, when an admiring and forward child cried from a corner of the crowd, *Ambrosius Episcopus*—'Ambrose Bishop.' The people hailed this as an omen from heaven, and in spite of every attempt on the part of Ambrose to elude the honour, he was baptized, and eight days after his baptism installed as bishop. The first literary work of bishop Ambrose was to patronise and advocate celibacy. But his principal efforts were directed against Arianism, which enjoyed imperial patronage, especially that of Justina, mother of Valentinian II. The city of Milan was embroiled in the conflict, but the bishop, backed by the population, was more than a match for the empress-mother and her Gothic troops. He put his episcopal power and prerogative to the test when he kept the emperor Theodosius for eight months under excommunication on account of a massacre in Thessalonica in which he had been concerned, and made him do public penance ere he was admitted into the great church at Milan. He also, in 384, successfully resisted the re-introduction of pagan worship. The affairs of his diocese occupied the remainder of his life, and he died in 397. The theology of Ambrose was chiefly borrowed from the fathers of the Greek church, and his eloquence, though great, is often tainted with an affected imitation of Ciceronian periods. His life was so occupied with the political relations of his high position, that he could not bestow upon theology a calm, prolonged, and successful study. He introduced into his cathedral the antiphonal chants of the Eastern church, but the magnificent 'TE DEUM LAUDAMUS,' which bears his name, was a composition somewhat later than his busy period. His works were published by the Benedictines of France in two folios, in 1686-90, and Cardinal Angelo Mai has also discovered and edited two others of his literary productions. [J.E.]

AMERIGO VESPUCCI, well known as the navigator after whom the New World has been named, was born at Florence in the year 1451. Little is known of his history till Ferdinand of Spain gave him employment as a pilot about the year 1495; at which time he was clerk or partner in the house of Berardi, also a Florentine, a merchant in Seville, and a contractor for the navy. On the 20th May, 1497, by his own account, and in 1499 by that of all others, he sailed from a port of Galicia, (Oporto?) with four ships, in the capacity of pilot to Alonzo de Ojeda. In 27 days from the Canaries the coast of S. America was reached, which he traced westwards as far as Cape de la Vela, holding occasional intercourse with the natives. Turning northwards, he touched at Hispaniola or Haïti, and reached Spain on 15th October, 1499. Subsequently the king of Portugal engaged his services; and, by his own account, he performed three other voyages; but these are considered apocryphal. Returning to Spain in 1505, he was favourably received; and on the death of Columbus, in the following year, he was appointed chief pilot. In 1507, he published, in Latin, an account of his voyages, which was eagerly read, and translated into several languages. The first suggestion of naming the continent after him was given in an Italian account of his voyages; and the claim was not disputed. Although an able geographer and skilful pilot, Vespucci cannot be vindicated from the charge of having falsified facts, by representing his first voyage of earlier date, and in omitting all mention of the traces which he found, on the coast of Paria, of Columbus's visit made in the previous year. He died in 1512. A certain Albericus, or Albert Vesputius, is related in the 'Novus Orbis' of Grymæus to have performed a voyage to the S. Atlantic in 1501, during which he fell in with the coast of Brazil. [J.B.]

 AMMONIUS, a philosopher of the eclectic school, flourished in the 6th century.
 AMMONIUS, called SACCAS, or SACK-CARRIER, from his first occupation at the port of Alexandria, is the reputed founder of the New Platonic school. He was born in the second century, and some affirm that he was born of Christian parents, but that in riper years he apostatized. Porphyry affirms it, while Eusebius and Jerome as stoutly deny it. Possessed of a creative genius, and conversant with the prevalent philosophies, he strove hard to form a species of eclecticism, in which Christianity and all systems of philosophy should be harmonized. In his attempt to accomplish this, he, as might be anticipated, robbed Christianity of its prime peculiarities, and did great violence to the current philosophies in accommodating them to the new religion. The works ascribed to him are numerous. Died 243, about eighty years of age. Longinus, Origen, and Plotinus are usually reckoned among his disciples. [J.E.]

 ANAXAGORAS, the most illustrious philosopher of the Ionian school; celebrated in history as the friend of Pericles, and because of his trial and condemnation at Athens for alleged impiety. He was born at Clazomene, in Ionia, in the seventieth Olympiad: when twenty-four years of age he removed to Athens, then the centre of civilization and of Grecian nationality. Saved from death by the intercession and influence of Pericles, he was banished from the adopted home where he had resided for thirty years; he passed the remainder of his life at Lampsacus, and died there at the age of seventy-two, surrounded by respect and honour. Anaxagoras belongs in philosophy to the *Ionian* school,—that school whose researches were confined to the nature and laws of *physical* phenomena. Nevertheless, he differs in important respects from his predecessors; and certainly he was the last Inquirer in Athens who ought to have been subjected to the accusation of impiety. The earlier Ionians, in their imperfect efforts to comprehend the changes of the external universe, generally imagined it possible to reduce all things to varieties of one single element;—for instance, it was a favourite speculation that *water* is the principle or substance of whatever exists; a dogma founded, perhaps, on a rude observation of the changes of form or

nade, through which water may pass. Anaxagoras had the merit of discerning the necessary futility of all such generalizations,—declaring that the elements, first principles, or *atoms* of things, must be very numerous, or even infinite; elements so far resembling each other as to be capable of combining together, and forming, by their various unions, those varied properties or qualities which we recognize in things. But, beyond this step—in itself highly important—Anaxagoras adventured on another, of still greater consequence. Accepting, like all the Ionians, the dogma that matter is eternal—that nothing can really be either created or annihilated—he saw, nevertheless, that the simple properties of an eternal and inert matter could not explain the *activity* and *harmony* characterizing the material universe. Hence, said he, the necessity of another power—the power of *Intelligence*. ‘All things were in chaos; then came Intelligence, which introduced Order.’ The functions of Intelligence, as he conceived them, were indeed limited—merely supplementary, as Aristotle alleged, to those of the physical forces: but the formal recognition of the necessity of such an energy, was surely a movement in philosophy as momentous as new. It must be recorded, in fairness, and in palliation of the condemnation of Anaxagoras, that to the charge of impiety, that of a political crime was added—the greatest, certainly, of which a Greek citizen could be suspected—the crime of *Medism*, or of favouring the interests of Persia.  ANSELM, born in Piedmont in 1033, died in April, 1109; the celebrated churchman and metaphysician—one of the greatest of those famous men who have held the see of Canterbury. On the death of Lanfranc in 1089, Anselm, then on a visit to England, and whose wisdom, gentleness,

and solidity of character had gained for him European repute, was nominated to the primacy by William Rufus. It is not necessary to refer here to the political history of this celebrated prelate; nor can we glance otherwise than cursorily at those products of his genius—the *Monologium* and the *Prosologium*, by which he is known in philosophy. These two remarkable writings are dedicated to an exposition of two demonstrations of the Existence of God. The *Monologium* contains the usual *inductive* argument—inferring from the qualities of Nature, absolute qualities or divine attributes; and resolving these into a divine and absolute Being. Anselm's original work is the *Prosologium*; and certainly he has stated there, in every fullness, the peculiar argument afterwards expounded by Des Cartes. Briefly, the argument is this, expressed nearly in his own words:—'The madman who denies the reality of God, *conceives*, nevertheless, of a Being more elevated than all others that exist, or rather so perfect, that nothing—no form of being—can be called superior to him. But he affirms that there is no *real existence* corresponding to this *mental conception* or *idea*. In making such an affirmation, however, he contradicts himself. Denying the attribute of *existence* to this very Being, to whom, nevertheless, he attributes all *perfection*, he virtually says, that the most perfect is inferior to many other things which are not perfect, but which enjoy the supreme attribute of existence.' We shall speak more fully of this peculiar form of argument, by which the *being* of God is attempted to be inferred from the *idea* of God, in our notice of Des Cartes.—Anselm's metaphysical writings have recently been republished by Bouchitté, under the title, *Rationalisme Cretien*: and Remusat has just completed a valuable volume on the prelate's life and character. ANSON, GEORGE, Lord, was born at Colwich, near Rugeley in Staffordshire, on the 23d April, 1697. His father was William Anson, Esq. of Shugborough, a property in the same county, purchased in the reign of James I. by William Anson of Lincoln's Inn, an eminent barrister, the founder of the family, and great-grandfather of the subject of the present notice. Little is known of Anson's early history; he entered the navy as a volunteer without patronage, and at the age of 19 or 20 was serving in the Baltic fleet under Sir John Norris. In 1717 he obtained a lieutenant's commission; 19th June, 1722, was made commander; and as captain of the Scarborough was sent in March, 1723-24, to S. Carolina, to protect British trade. On the breaking out of the Spanish war in the end of the year 1739, he was appointed to the command of a squadron, destined for the west coast of S. America, to attack the colonies of Spain, and cut off supplies by intercepting the treasure ships. This was the origin of the voyage round the world, for which Anson's name is best known. It proved one of the most disastrous on record; not by any fault of the commander, but owing to the ignorance and imbecility which prevailed at head-quar-

ters. Several of the ships were ill-conditioned; he was obliged to receive on board 260 infirm old men, out-pensioners of Chelsea College, most of whom were above 70, and none under 60 years of age; and the sailing of the squadron was delayed till the worst season. It did not leave St. Helen's till 18th Sept., 1740, and soon after passing Madeira, scurvy, fever, and dysentery broke out among the crews. Tremendous gales, encountered in rounding Cape Horn, dispersed the squadron; two ships were driven back along the coast of Brazil, and never rejoined; one was wrecked on the coast south of Chiloe; the commodore's ship the *Centurion*, 60 guns, and the *Tryal* sloop, 8 guns, reached Juan Fernandez on the 9th June; the *Gloucester*, 50 guns, not till 23d July, having been under sail for five months in a stormy ocean, 'a circumstance unparalleled in the history of navigation.' The health of the crew was completely restored in this delightful island; but out of the original complement for the three ships of 800 men, there now remained only 335. A cruise of eight months on the coasts of Peru and Mexico secured some rich prizes, but added very little in the way of geographical discovery, if we except some coast and port surveys. The two other ships being disabled were destroyed, and with the *Centurion* only, containing all the useful stores and the surviving men, whose ranks had been again fearfully reduced by disease, Anson crossed the Pacific to China, having remained some time at Tinian, one of the Ladrões, 'an earthly paradise,' to recruit. Leaving the Canton river after a stay of five months, refitting and provisioning, he lay in wait, on the coast of Luzon, for the *Acapulco* galleon, which annually brought an immense treasure from Mexico in return for goods from Manilla. This rich prize he captured after a smart engagement with a force more than three times his own, and thus possessed himself of nearly a million and a-half of dollars and 35,682 oz. of pure silver. Returning to Canton he sold the galleon, and soon after sailed for England. Touching at the Cape, passing in sight of St. Helena, and running in a fog through the middle of a French fleet cruising in the channel, he reached Portsmouth in safety, on 15th June, 1744, after an absence of three years and nine months. Not one of the 260 veterans returned. The treasure was welcome;—the only other advantage was the familiarizing British seamen with the dreaded 'southern ocean.' In 1748 an account of the voyage in a thick 4to vol. was published by subscription, ostensibly drawn up by Rev. Richard Walter, A.M., chaplain in the *Centurion*, but really, as Sir J. Barrow has shown in his life of Anson, by Col. Robins, an engineer officer who went with him. Several editions were called for. A second volume, to contain the nautical observations, was promised, but never appeared, owing to Robins being hurried off to India. Even from the account we have, however, we can see that many errors in seamanship were committed; but the chronometer was not then invented, and the lunar method, though known to astronomers, was not yet practised at sea. Not long after his return we find Anson at the head of the Admiralty Board as first lord. In this capacity he rendered great service to the nation; he improved the ships, promoted the most deserving officers in defiance of etiquette,

and did much in laying the foundation of that pre-eminence which the navy of Britain has long maintained. In 1747, on occasion of a victory which he gained over the French, he was created baron Anson of Soberton in the county of Hants. In 1748 he married the lady Elizabeth, daughter of the lord chancellor, earl Hardwicke. His ordinary residence was Moore Park, Hertfordshire. He died without issue, 6th June, 1762, having outlived his wife two years. His elder and only brother, Thomas, died also without issue in 1771. The bulk of the property of both was inherited by George Adams, Esq. of Sambrooke, Staffordshire, son of their only sister, who assumed the name and arms of Anson; but the title became extinct. A new creation took place, however, in 1806, and in 1831, the third viscount Anson was created earl of Lichfield. [J. B.]

APELLES, founder of a heresy, 2d century.

APELLES, the most celebrated painter of antiquity, was born about 365 B.C. at Cos, or at Colophon in Ionia. When already an accomplished master, apparently, he entered as a pupil in the celebrated school of Pamphilus, at Sicyon, and paid the enormous fee of this school, a talent, (about £220 sterling,) purely for the sake of the reputation enjoyed by its pupils.—Apelles seems to have earned his unrivalled reputation partly by his unintermittent industry, which became proverbial, even among the Romans—'*nulla dies sine linea*' is a saying, according to report, which originated with this great Greek painter. Painting itself is sometimes termed by the Romans the Apellean art.—An examination of the particular services of Apelles does not seem to justify his extraordinary reputation, for he appears to have been little more than a portrait painter, though doubtless one of the very highest class. In every respect, save one, however, he was surpassed by some one of his rivals, but in the management of the whole, in that peculiar quality which the Greeks called *Charis*, grace or beauty, he was unrivalled. A list of his known works will convey the most accurate notion of his style. Perhaps the most celebrated was the *Venus Anadyomene*, or Venus rising out of the ocean, which became in after years such a favourite picture among the Romans, that Ovid (*Art. Amat.* iii. 401,) paid it the extraordinary compliment of saying, that but for this picture, Venus would have still remained buried beneath the waves of the sea. The picture was painted for the people of Cos, where it remained until removed three centuries afterwards by the emperor Augustus to Rome, who took it in lieu of 100 talents tribute; an enormous price, and yet less by some thousands than was recently paid for the *Soult Murillo* by the French government. The picture was, unfortunately, much damaged on the voyage, and was, within a century from the time of its dedication in the Temple of Julius

Cæsar, dictator, at Rome, replaced by a copy, by order of Nero. The history of this picture is worthy of note, as it is the prototype of so many similar stories of later ages. Other celebrated works were, King Antigonos on horseback; a portrait of Campaspe, a beautiful slave and favourite of Alexander the Great, who presented her to the painter in reward for the picture which he made of her; several portraits of Philip of Macedon, and of Alexander himself, who is said to have given Apelles the exclusive right of painting him; for one of these, representing the king as Jupiter hurling his thunderbolts, Alexander is said to have presented Apelles with 20 talents of gold, about £50,000 sterling, twice the largest sum ever recorded otherwise, as the price of a picture. Further, are mentioned a figure of Fortune, seated; a naked hero; a back view of a Hercules; a clothed figure of one of the Graces; Clitus preparing for battle, mounted on his charger, and receiving his helmet from his arm-bearer; Antigonos in armour walking by the side of his horse; Archelaus with his wife and daughter; and the two following works, the only two pictures by Apelles recorded, which appear to have contained a considerable number of figures—Diana surrounded by her nymphs, in which he was allowed to have surpassed the lines of Homer, from which he took his subject; and the pomp or procession of the high priest of Diana at Ephesus.—The pictures of Apelles were probably mostly painted upon panels of larch, (he used to boast that he never painted upon a wall,) and executed in distemper: the impasto was doubtless very similar to that of the Italian quattrocento masters before the introduction of oil painting. The Greeks had abundant resources in colours, and there is every reason to suppose that they were in every respect as great in painting as in sculpture. Apelles himself, among other distinctions, is renowned for having introduced a very effective mode of glazing, or toning his pictures, which Sir Joshua Reynolds assumed to be the same process adopted by the Venetians of the sixteenth century. [See PROTOGENES.]—Many anecdotes are recorded showing the intimacy between Alexander the Great and Apelles, and others of still more value, showing his own liberality of disposition, and great skill and judgment in his art. One anecdote, related by Pliny, as illustrating a peculiar feature of Greek customs, may be recorded here:—Apelles had put in at Alexandria, driven there by contrary winds; Ptolemy I. was then, at the close of the 4th century, B.C. king of Egypt, with whom, while he was general, Apelles had been on bad terms. Some of the painter's rivals at the court of Ptolemy, taking advantage of this circumstance, endeavoured to do him an injury; they persuaded the royal fool to invite Apelles to sup with the king. Apelles attended accordingly, but Ptolemy indignant at the intrusion, demanded by whom he had been invited; when the painter seizing an extinguished coal from the hearth, drew upon the wall the features of the man who had invited him with such mastery, that Ptolemy in the very first lines recognized the portrait of his buffoon, and through this trifling incident became reconciled to the painter and received him into his favour.—Apelles survived Alexander many years;

he does not appear to have accompanied him as far as Babylon; the date of his death is unknown. He left writings on the arts, which he dedicated to his pupil Perseus; they have not been preserved. He was celebrated for the beauty of the horses in his pictures.—There was another Apelles, of Ephesus, mentioned by Lucian, who lived at the court of Ptolemy Philopator, about B.C. 220.—(Pliny, *Hist. Nat.* xxxv. 36; Plutarch, *Arat.* 12, *Alexander 4*, *Fort Alex. Mag.* 2, 3; Junius, *Catalogus Artificum*, &c. &c.—Wornum, *Epochs of Painting*, vol. i.) [R.N.W.]

APOLLODORUS OF DAMASCUS, one of the most celebrated architects of antiquity. He built the forum and column of Trajan at Rome, of which there are still magnificent remains, in the year 113 A.D. and was much employed by Trajan in Rome and elsewhere. His most remarkable work, however, was the great bridge over the Danube in Bulgaria, where the Alt runs into that river; it stood on 20 piers, 150 feet high above the foundations, 60 feet wide, and 170 feet apart. It was built for the emperor Trajan; the bridge was of wood, but the piers were of stone. The wood-work was afterwards destroyed by Hadrian, as it gave the barbarians too great facilities for crossing the Danube. Remains of the piers are still standing. Apollodorus is said to have fallen a victim to the jealousy of Hadrian, who dabbled in architecture as well as other arts.—(Dion Cassius, lxxviii. 13, lxxix. 4; Procopius *de Edif. AQUILANUS, a physician of Padua, d. 1543.

AQUINAS, THOMAS, usually called the Angelic Doctor, was a younger son of the count of Aquino, and was born at the castle of Rocca Sicca in 1227. This place was situated on the border line between the states of the church and the territory of Naples. From his earliest years he was smitten with the love of solitary study, and when a very young man he entered the Dominican order. Force was employed to prevent his becoming a monk, but in vain. So much was the youthful scholar wrapt up in his own cogitations, that when he studied at Cologne, under Albertus Magnus, his fellow-pupils gave him the name of *Bos Mutus*, 'mute ox,' on account of his taciturnity and apparent stupidity. In 1255 the university of Paris gave him the title of Doctor in Theology. He lectured with brilliant success in Paris, in several of the Italian universities, and ultimately at Naples. Being summoned by the pope to attend a general council at Lyons in 1274, he commenced his journey, and had reached Terracina, where he died, at the age of forty-eight. He was canonized by pope John XXII. in 1323. The Parisian edition of his works is in twenty-three folio volumes. But the amazing industry of Thomas during his brief life, is wholly eclipsed by his prodigious mental wealth, as displayed in his 'Summa Theologiæ' and 'Commentary on the Sentences of Peter Lombard.' In concise and earnest simplicity of style, in subtle and daring speculation, in purity and loftiness of aim, in orthodoxy of religious sentiment, in acuteness and vigour, in breadth and depth of view, in intellect and heart, in piety and temper, Thomas Aquinas is the acknowledged prince of the mediæval schoolmen and divines. [Archimedes—Rossi, Gemme Antiche.]

ARCHIMEDES, the most celebrated of the ancient geometers, was born at Syracuse, about 291 B.C. He was related, on his father's side, to Hiero king of Syracuse, who deemed it an honour to have so distinguished a philosopher as his relative. Having acquired at an early age all the knowledge which could be obtained in his native city, he visited Egypt, which had long been regarded as the great seat of science, and he remained there for several years, enjoying the society of its distinguished men, and storing his mind with the knowledge which they imparted. With a partiality which cannot be too severely condemned, one of the biographers of our philosopher has asserted that he conveyed to the Egyptians more knowledge than he received; but even if we had not been assured by Abulpharagus that he derived all his knowledge of mechanics from the Egyptians, we might have deduced the same truth from the well-known practice of the Greek philosophers, who, in the infancy of their science, went in quest of it to Egypt.—Upon his return to Syracuse, laden with the intellectual spoils of the East, he devoted the whole of his time to the cultivation of the mathematical and physical sciences, and it was only when his country was in danger that he abandoned his studies, and directed all the energies of his mind against the enemies of Syracuse.—In the war which was carried on by the Romans against Hiero, about the year 212 B.C. they had obtained some signal advantages in Sicily, and were thus emboldened to lay siege to Syracuse itself. Inspired with terror at the naval and military preparations of the Roman general, the inhabitants were disposed to offer an ignominious capitulation. Archimedes, however, removed their fears, and inspired them with courage. He is said to have erected vast machines, under the protection of the walls of the city, which baffled the attempts of the Roman engineers, and carried terror into the camp of the enemy. The machines by which he resisted the assaults of the Romans have not been described, and we can easily conceive that he erected works of defence which disconcerted and alarmed his enemies; but when we are told that he sunk the ships of the besiegers when they approached the city, by means of long beams of wood, and that, with grappling hooks at the end of levers, he raised the vessels into the air, and dashed them against the rocks or the walls, we feel that we are in the region of fable and romance, and must regard all such assertions as among the impossibilities of practical science. The inventions by which he is said to

have destroyed the Roman fleet when at a distance are less incredible. We may well believe that he had so improved the ballistæ of the ancients as to throw stones or missiles to a greater distance, and with a greater force, than had been done before; and we may even admit that, by a number of plane mirrors throwing the reflected image of the sun upon one point, he could burn a ship at a distance; but we cannot believe that the Roman fleet was thus destroyed, unless we had it in evidence that the crew were asleep. We have in the present day better mirrors than Archimedes could command, and better machinery for uniting their reflections upon one point, but we venture to say that a British or a French admiral would laugh at any such attempt to annoy him. Buffon, it is true, has endeavoured to attach a degree of probability to the story of burning a ship optically. He combined 168 plane mirrors so that he could direct the light of the sun which they reflected to one spot, and he found that he could burn wood with them at the distance of 200 or 300 feet.—This curious subject has been more recently discussed by M. Peyrard. Assuming the accuracy of Buffon's experiments that five times the heat of the sun is sufficient to inflame planks smeared with tar, M. Peyrard supposes that eight times the sun's heat will set fire to all kinds of wood; and upon this supposition he found that, at the distance of about a mile and a-half, it would require 2267 mirrors to burn wood, and at the distance of three quarters of a mile 590. This calculation proceeds upon the supposition that their reflections are all coincident, and that the mirrors have their two surfaces perfectly plane and parallel. But it is well known that these conditions are impossible, and that the most perfect mirror that the most skilful optician could grind and polish, would, at the distance of three quarters of a mile, and much less, scatter the light which it reflects over a surface ten times greater than its own, and would have very little power in the combustion of wood. But there are other conditions necessary before these mirrors, even if mathematically perfect, could set fire to ships. The ships must be absolutely at rest before the combined reflectors could inflame the wood upon which they fell, and, as has been already stated, the crew must be asleep in the daytime when the sun is shining. We regard, therefore, the story of the burning of the Roman fleet to belong as much to romance as the fishing for ships with hooks at the end of levers, the sinking of them by long beams, and the whirling of them in the air by ropes and grappling hooks. It is no slight presumption in favour of these opinions that the gigantic mechanism which the Syracusan philosopher is said to have wielded against the Roman power was of little avail in the defence of the capital. The siege was converted into a blockade. During the celebration of the festival of Diana, when the Syracusans had indulged in a fatal security, the Romans attacked and obtained possession of the city. Marcellus had issued an order that Archimedes and his house should be spared; but, either from ignorance of the order on the part of a Roman soldier, or from the obstinacy of Archimedes in refusing submission, he was run through the body while drawing a geometrical diagram on

the sand. Marcellus was deeply afflicted when he heard of the event. He took the relatives of the philosopher under his special protection, and in erecting a monument to his memory, he fulfilled the wish that Archimedes had expressed in his lifetime, that a sphere inscribed in a cylinder should be engraven on his tomb. The death of Archimedes took place B.C. 212, and 140 years afterwards, Cicero, while questor in Sicily, went with a party of Syracusan nobles in search of the tomb of the great philosopher, which his countrymen had allowed to go into decay. 'Remembering,' says Cicero, 'some verses, said to have been inscribed on his tomb, which mentioned that on the top of it there was placed a sphere in a cylinder, I looked around me upon every object at the Agrigentine Gate, the common receptacle of the dead. At length I observed a small column rising above the thorns, upon which was placed the representation of a sphere in a cylinder. This, said I to the nobles, must be what I am seeking. Several persons were immediately got to clear away the weeds, and lay open the spot. As soon as a passage was made, we found on the opposite base the inscription, with nearly the latter half of the verses obliterated.'—The reputation of Archimedes did not require to be sustained by the fables with which the vanity of his countrymen has surrounded his name. His discoveries in geometry, mechanics, and hydrodynamics would have immortalized him, had posterity never heard of his magical artillery against the Roman fleet. He discovered that the surface as well as the solidity of any sphere is equal to two-thirds of its circumscribing cylinder; and that the ratio of the diameter of a circle to its circumference is nearly as 7 to 22. It is to him that we owe the demonstration of the fundamental property of the lever, and the method of finding the centre of gravity of plane surfaces. He discovered the *quadrature* pressure of fluids, and pointed out the condition under which a solid body is in equilibrio when floating in a fluid. He invented the screw for raising water which bears his name; and we owe to him the process of detecting the adulteration of the precious metals, which he so successfully applied in proving the impurity of the gold in king Hiero's crown.—A splendid edition of the works of Archimedes was printed at the Clarendon Press at Oxford, in 1792, edited by our countryman, the Rev. Abraham Robertson. [D.B.]

ARIOSTI, ATTILIO, a composer 17th century.

ARIOSTO, LODOVICO, the son of a gentleman in the service of the dukes of Ferrara, was born in 1474, at Reggio, near Modena. His life, though not prosperous, was far from being eventful: during the whole of it he was employed, in various capacities, by the ducal house of Este, who, niggardly and careless in their treatment of this great poet, behaved even worse in the next generation to the unfortunate Tasso. From the schools of Ferrara he passed to Padua, where he was compelled to study law for five years, busying himself also with the classics, and being at length allowed by his father to abandon the legal profession. About 1503 he was received into the retinue of cardinal D'Este, a younger son of the reigning duke of Ferrara. As he grew older, he was repeatedly employed on confidential public missions by Alfonso, the next duke, the cardinal's elder brother; and when, in 1517, he lost the cardinal's favour by declining to attend him into Hungary, duke Alfonso took him into his own service. He received some trifling ecclesiastical appointments, capable of being held by a person not in orders; and for three years, from 1522, he was busied in organizing and governing the mountainous district of Garfagnana, which had just been re-acquired by the house of Este. He continued to be a needy man, though there is no reason for supposing that he lived extravagantly or irregularly; and, even if there was insufficient ground for his complaints of the parsimony of his patrons, it seems to be quite certain that they were blind to his literary merit. His last few years were spent in Ferrara, where he died in 1533.—Ariosto would hold a place in the history of Italian literature, although he had contributed to it nothing but his minor works. His Rime, or short pieces of familiar verse, such as sonnets and other lyrics, are excellent in their class; his seven poetical Satires, gay, good-humoured, and wittily observant, stand in the first rank among Italian compositions of the kind; and there is much of felicitous wit, not without great indecency, in his five versified Comedies. But it is the 'Orlando Furioso' that makes him immortal, as one of the greatest of modern European poets. This celebrated work stands in an odd relation to similar poems that preceded it. In the course of the fifteenth century, metrical romances of chivalry appeared in Italy; and towards the close of that

century Pulci and Boiardo, borrowing from the romances the fabulous history of Charlemagne and his paladins, and imitating much of that union of the serious and the comic which marked the effusions of the minstrels, worked up these materials into chivalrous poems. Boiardo's 'Orlando Innamorato' takes its name from the love of its hero, the knightly Orlando or Roland, for the Eastern princess Angelica. Of this poem, Ariosto's, (first published incomplete in 1516, and then in its present shape in 1532,) is just a continuation. Orlando's madness, caused by jealousy, furnishes its title, and a considerable part of its incidents. But Charlemagne's war with the Saracens is fully related: isolated adventures of many of his champions are continually introduced; and a prominence, which increases as the work proceeds, is bestowed on the knight Ruggiero and the beautiful amazon Bradamante. The poem closes with events which remove obstacles to the marriage of these personages, who are represented as the ancestors of the family of Este; and their history is regarded as the leading story of the Orlando, by those critics who are unwilling to allow that it is nothing more than a collection of episodes. If unity of design was really attempted by the poet, he has certainly failed in the execution: no one series of adventures is so decisively prominent as to fix the attention of the reader; and the several stories are interwoven, and alternately dropped and resumed, with a caprice and complexity which make it no easy task to follow the windings. The mixture of gaiety with seriousness is continual; yet these dissimilar elements are harmonized with much skill and delicacy: and the airy sportiveness of fancy which is prevalent throughout, and the extraordinary animation with which the chivalrous perils and acts of heroism are depicted, concur in shedding over the poem a charm which is irresistible. In point of poetic adornment, the Orlando is at once rich and original: Ariosto is as much superior to Tasso in native genius, as he is inferior to him in skill of constructive art. [W.S.]

ARISTO, GABRIEL, brother of the celebrated poet, also a poetical writer.

ARISTO, HORACE, son of the preceding, a poet and comedian, died 1593.

ARISI, FR., an advocate and poet, 1657-1743.

ARISTENATUS, an elegant Greek wr., 4th c.

ARISTARCHUS, a grammarian and critic of noted severity, 2d century B.C.

ARISTARCHUS, a Greek philosopher of the 3d century B.C., whose works on astronomy show that he was acquainted with the rotation of the earth upon its own axis.

ARISTEAS, a Jewish chronicler, 1st cent. B.C.

ARISTIDES, a Greek painter, 3d cent. B.C.

ARISTIDES, ÆLIUS, a Gr. orator, 2d ct. B.C.

ARISTIDES, QUINTILLIAN, a didactic writer, author of a work on music, 2d century.

ARISTIDES, a philosopher, 2d century.

ARISTIDES OF THEBES, a painter, contemporary with Apelles, was, according to Pliny, the greatest master of expression among the Greeks. The same writer relates that when Alexander the Great stormed Thebes, he was so struck with a picture by him of a dying mother with a child at her bosom, that he ordered it to be sent to his palace at Pella.

The works of Aristides were in great repute even during his lifetime. Mnason, tyrant of Elatea, paid him £3,600 for a single easel picture of a battle of the Persians, containing one hundred figures only. After the siege of Corinth, 146 B.C., Attalus III., king of Pergamus, offered £5,800 for a picture of Bacchus and Ariadne by Aristides, but the Roman general Mummius, thinking the picture had some hidden value in it, sent it to Rome, where it was dedicated in the temple of Ceres. A celebrated picture by this painter, preserved in the temple of Apollo at Rome, was destroyed by a picture restorer, to whom the prætor, M. Junius, had given it to be cleaned before the celebration of the Apollinaria; another of the incidents which show how similar are the stories of ancient and modern art. Aristides painted in encaustic, that is with wax colours, the picture being afterwards *burnt in*.—(Pliny, *Hist. Nat.* vii. 39, xxxv. 4 8, 10 36, 11 39, 40.) [R.N.W.]

[The Pnyx at Athens.]

ARISTIDES, surnamed the Just, an Athenian general and statesman, whose intrepidity greatly contributed to the victory of Marathon. Being banished through the intrigues of Themistocles, B.C. 483, he was recalled by his countrymen to oppose Xerxes, and distinguished himself at the battle of Salamis. After serving in the highest offices of the state, he died a poor man, 467 B.C.

ARISTIPPUS, king of Argus, killed 242 B.C.

ARISTIPPUS, a pupil of Socrates, and founder of a school of philosophy at Cyrene, 4th cent. B.C.

ARISTO, an Aristotelian, 3d century B.C.

ARISTO, TRITUS, a Stoic, time of Trajan.

ARISTOBULUS I., a Jewish prince, succeeded his father Hyrcanus as high priest, and took the title of king 107 B.C.; died 108.

ARISTOBULUS II., usurped the throne 70 B.C.; deposed by Pompey 63 B.C.

ARISTOBULUS, brother of Mariamne, wife of Herod the Great, killed 35.

ARISTOGITON, an Athenian, executed B.C. 516, for conspiring against the Pisistratides.

ARISTOMENES, a Greek general, representative of the royal house of Messene, 7th cent. B.C.

ARISTOPHANES, a celeb. name in the Greek drama, author of numerous comedies, equally remarkable for the beauty of their composition, and their pungent satire, flourished in the 5th ct. B.C. His life and works have given occasion to a vast amount of learned writing and critical inquiry, but the facts known concerning him are few in number. Out of 44 compositions of his, only 11 are extant.

[Aristotle—From an Antique Bust.]

ARISTOTLE. This distinguished philosopher, founder of the celebrated Peripatetic school, was born at Stagira, a city of Thrace, in the year 384 before Christ. His father, Nicomachus, was the physician of Amyntas, king of Macedon, and his mother, Phæstis, as well as his father, believed to have been descended from Esculapius. Having lost both his parents in early life, he was placed under the guardianship of Proxenus, an eminent citizen of Atarneus, a city in Mysia, and after completing his seventeenth year, he repaired to Athens, to study in the school of Plato. Here he remained for twenty years, imbibing the noble spirit of his master, devoting himself to the acquisition of every species of knowledge, and honoured in the estimation of his teacher and of his companions, as 'the intellect of the school.'—Upon the death of Plato, 348 B.C., Aristotle took up his residence at Atarneus, on the invitation of his friend Hermias, who though originally the domestic slave of an Athenian banker, who had permitted him to attend the school of Plato, was now independent sovereign of Atarneus and Assos. At the small but interesting court of his friend, and surrounded by the scenes of his early studies, Aristotle spent three happy years, enjoying the society of intellectual friends, and devoting himself with unremitting assiduity to the study of nature. Here, too, he had formed ties warmer than those of friendship. Pythia, the niece of the king, had gained his affection, and when the unfortunate sovereign had been betrayed by some worthless individuals who had enjoyed his hospitality, and had forfeited his life as a rebel against the king of Persia, Aristotle fled to Lesbos with the family of his friend, and was soon afterwards married to his niece, who did not long survive her uncle.—During his residence at Mytilene, in Lesbos, which was continued for two years, Aristotle seems to have received from Philip, king of Macedon, the flattering invitation to superintend the education of Alexander his son. The compliment thus paid to his talents and character was too high to be rejected; and though the duties which such an office demanded might have interfered with the progress of his studies, he cheerfully accepted of it, and took up his residence at Pella, when Alexander had reached his fourteenth year. The king received him with the most marked attention, and science and learning have in no future age been more highly honoured than they were at the court of Macedon in the person of the distinguished Stagyræite, and through

the liberality of the most powerful of sovereigns. The Macedonian prince was instructed during five or six years in grammar, rhetoric, poetry, logic, ethics, and politics, and in those branches of physics which had even at that time made some considerable progress. Aristotle made a new collection of the *Iliad* for the use of his pupil, and composed a treatise 'On a Kingdom,' which has not descended to our times.—Upon the death of Philip, in 336 B.C., Alexander succeeded to the throne, when in the twentieth year of his age, and Aristotle continued to live with him as his friend and counsellor till he set out on his Asiatic campaign in 334 B.C. The delicate constitution and intellectual habits of the philosopher prevented him, at the age of fifty, from following his pupil in his martial career, and he accordingly returned to Athens, where, in the charming retreat of the Lyceum, he delivered his lectures to crowded audiences, while walking in the shade, amid the trees and fountains with which it was adorned.—While thus instructing his pupils, and enjoying the popularity and reputation to which he had attained, he became, like all illustrious teachers of philosophy, the object of envy and persecution. His rivals in learning directed against him the usual calumnies which genius is ever destined to endure from the ignorance and malice of its enemies; and the heathen priests, dreading the progress of truth as the greatest enemy of their faith, charged the philosopher with impiety and sedition. The friendship of Alexander had hitherto shielded him from open persecution, but upon the death of that monarch, in B.C. 323, he was charged before the Areopagus as an enemy to the religion of his country, and avoided the fate of Socrates, which he knew awaited him, by making his escape to Chalcis, a city of Eubœa. In this city of refuge he spent the remainder of his life. Exhausted with mental labour, and broken in spirit by his misfortunes, his feeble constitution gave way, and he died in 322 B.C., in the sixty-third year of his age, about a year after his retreat to Chalcis. His remains were carried to Stagira by his fellow-citizens, and an altar and shrine erected over his grave. The festival of *Aristotelia* was instituted in gratitude for his services, and even in Plutarch's time the garden of the philosopher, with its walks and bowers, was exhibited to the public. In his personal appearance, Aristotle was defective. He is described as having little eyes and slender limbs, with a feeble voice and an imperfect utterance; and he is said to have improved the symmetry of his person by great attention to dress, and the use of elegant ornaments.—The writings of Aristotle were carried to Rome among the other spoils of Athens, when it was captured by Scylla, and they were edited by Andronicus the Rhodian, about three hundred years after they were composed. In our narrow limits we can neither record the number nor estimate the value of his writings. He divided philosophy into three departments—*theoretic*, embracing physics, mathematics, theology, and metaphysics; *efficient*, including logic, rhetoric, and poetry; and *practical*, including ethics and politics. See Dr. Gillies's *Ethics and Politics of Aristotle, with an account of his Life*, 2 vols. 4to, 1797. [D.B.]

ARISTOXENUS, one of the most celebrated disciples of Aristotle, 4th century B.C.

ARIUS, the noted heretic, was born about the middle of the third century. His entire life was embroiled with disputes, principally with bishop Alexander and with Athanasius on the divinity of Christ. Arius held that God created his Son, that the Son had not existed from all eternity, and was not in dignity and essence equal with the Father. This fatal heresy was solemnly condemned by the great council which met at Nice in 325. After numerous vicissitudes, strifes, and intrigues, Arius was in the act of celebrating a triumph in Constantinople, when he retired from the crowd to satisfy a call of nature, and then and there suddenly died at a very advanced age. His enemies rudely reckoned his manner of death a judgment from heaven. Arius was a man of bustle and ambition, soured by disappointment, and irritated by defiant opposition, and his errors, if not prompted, were at least shaped to some extent by the exciting circumstances in which he was placed. [J.E.]

ARKWRIGHT, **SIR RICHARD**, an extraordinary man, whose genius has created a permanent influence on the constitution of civilized society. Born in Preston in 1732, of humble parents, the youngest of 18 children, he was brought up as a barber. About 1760 he quitted this precarious business, and dealt in *hair*, which he collected about the country, and discovered how to dye it and prepare it for wig-makers. From 1767, not till he was 35 years of age, Arkwright gave himself up exclusively to the subject of inventions for spinning cotton. In 1768 he was in Preston constructing his first machine. At this time his poverty was such, that 'being a Burgess of Preston he could not appear to vote till the party with whom he voted gave him a decent suit of clothes!' Apprehensive of meeting with the same hostile treatment from the operative weavers of the district as Hargreaves had met with, Arkwright removed to Nottingham, where he became a partner with Mr. Jedediah Strutt, the ingenious improver and patentee of the stocking frame, and who rendered essential assistance in perfecting the invention for which Arkwright obtained his first patent in 1769.—The improvement for which the patent was obtained, consisted mainly in the use of two pairs of rollers, the first pair, between which the carded cotton in the form of a 'spule,' or soft cord, passed, revolving slowly; and the second pair revolving two, three, or ten times as fast, so as to *draw out* the spule to one-half, one-third, or one-tenth of its thickness when between the first rollers. This invention was followed up by various improvements and combinations of machinery, and mills for spinning cotton by this method were erected in Nottingham first, and then at Cromford in Derbyshire. The system has since been universally adopted, and in all its main features remains unaltered to the present time. Out of this invention have grown up the largest manufacture, the largest trade, some of the largest cities, the largest revenue, and the largest national prosperity in the world. Arkwright did not escape the system of robbery and persecution, the fate of most patentees of successful inventions then as now. By aid of false witnesses a combination of the persons in the spinning trade succeeded in 1781 in depriving Arkwright of his patent right. The evidence upon which the patent was annulled, and upon

which it has been much the fashion to depreciate Arkwright's talents, was that of persons in a low station of life, who spoke of circumstances which had occurred 18 years before!—Arkwright's genius was not that of a mechanic alone. Although the details of manufacturing or commercial business were altogether new to him, and although it was five years before the works at Cromford returned any profit, yet by indomitable energy he turned the tide of prosperity and wealth to his own advantage, and for several years regulated the cotton market. He left great wealth to his heirs, who in their generation increased their patrimony to the most colossal fortune, perhaps, that has been realized in Britain. [L.D.B.G.]

ARLAND, **J. A.**, a painter, died 1743.

ARLER, **PETER VON**, an architect, 14th cent.

ARLOTTO, **M.**, a facetious writer, 15th cent.

ARMELLINI, **M.**, a learned monk, died 1737.

ARMFELDT, **CHARLES**, baron of, a Swedish general, time of Charles XII.

ARMFELDT, **GUSTAVUS MAURICE**, count of, a Swedish statesman, died 1814.

ARMINIUS, or **HERMANN**, a German chief, who maintained his ground for years against Varus and Germanicus, and was at last slain by the treachery of one of his countrymen, 21.

ARMINIUS, (**VAN HARMINE**.) was born at Oudewater, South Holland, in 1560. After studying at Leyden he went to Geneva, and enjoyed the prelections of Beza. His mind seems to have had an early love of innovation, an early itching to oppose established forms of thought and belief, and he became a romantic supporter of the philosophy of Peter Ramus. At the age of twenty-six he was ordained minister of one of the churches in Amsterdam, and preached with great acceptance. His views soon became unsettled, and he was entangled in controversy. In 1603 he succeeded Junius in the chair of theology at Leyden. Next session he attacked the doctrine of predestination, and based it upon foreknowledge of faith and merit. Gomar became his resolute antagonist. The warfare waxed hotter and hotter, and the States-general interfered, but to no purpose. Arminius died in 1609. The candour and honesty of Arminius are unimpeached, and his ability is undoubted, but the system which now bears his name was elaborated after his death by Episcopius and Limborch, several of its distinctive tenets not being held by its name-father. [J.E.]

ARMSTRONG, **JOHN**, a cel. phys., au. of many valuable works on medical science, 1784-1829.

ARMSTRONG, **JOHN**, M.D., a Scotch physician, better known as a poet, was born at Casleton, on the banks of the Liddel, in Roxburghshire, 1709, and graduated at Edinburgh, 1732. He was already distinguished by his love of literature and the arts, but more especially for his classical attainments and taste in poetry. After one or two professional essays, he published, 1735, a poetical brochure, entitled, an 'Essay for Abridging the Study of Medicine,' a pleasant attack on the orthodox faculty, in the dialogue of which he is said to have caught the very spirit of Lucian. This was followed in 1737 by a professional work on a subject requiring great delicacy in its treatment, and two years afterwards by 'The Economy of Love,' a poem which passed through several editions, 'more to the

profit of the publisher than the reader.' His reputation, clouded by this unfortunate sally of humour, was fully established in 1744 by the 'Art of Preserving Health,' which is still regarded as one of the best didactic poems in the English language, and has placed its author in the same rank as Akenside. From this period to 1758, Dr. Armstrong published several fugitive pieces, more or less correct in taste, and in the last-named year a volume of sketches, remarkable for their ill-humour, under the pseudonyme of Launcelot Temple, Esq. In 1760, his poetical epistle entitled 'The Day' was published, as the preface declares, without the knowledge or consent of the author, and procured for him the enmity of Churchill, who retorted its reflections in severe, and it may be unjustifiable, terms. Armstrong was evidently dissatisfied with his place in public esteem, and in all probability had cherished a morbid sensibility on this subject, which was ill concealed by the affectation of a good-natured cynicism, described by the poet Thomson, who was also his intimate friend, as 'both humane and agreeable, like that of Jacques in the play.' This quality, whether agreeable or the contrary, was abundantly manifest in a volume of medical essays, published 1771, in which, however, some advanced views in physiology are put forth. The professional career of Dr. Armstrong brought him little distinction. In 1741, we find him soliciting the appointment of physician to the West Indian fleet. In 1746 he was appointed to the hospital for lame and sick soldiers behind Buckingham House, and in 1760 accompanied the German army as physician. His collected poetical works were published in 2 vols. 8vo, 1770, and along with them his tragedy of the 'Forced Marriage,' which had been rejected by Garrick. Dr. Armstrong died in consequence of a fall when stepping from his carriage, in 1779, and surprised his friends by leaving a saving of three thousand pounds out of his moderate income. [E.R.]

ARNE, THOMAS AUGUSTINE, Mus. Doc., the son of an upholsterer, was born in King-Street, Covent Garden, London, in the year 1710. Arne, who was by his father intended for the legal profession, was educated at Eton, and served a regular term to an attorney; but his love of music prevailed over all obstacles, and contrary to his father's wishes, he forsook the subtleties of law for the then less lucrative study of music. His ungovernable taste led him to have recourse to strange and eccentric methods for its gratification, of which the following incident furnishes an example:—While engaged in the attorney's office his means were limited, and his musical appetite insatiable, but that he might have an opportunity of gratifying it, he often, as we find on the authority of Dr. Burney, 'used to avail himself of the privilege of a servant, by borrowing a livery and going into the gallery of the opera, which was then appropriated to domestics.' While an apprentice with the lawyer, the young enthusiast received some lessons on the violin from Michael Christian Festing, a German violinist then in much repute, and in a short time made so much progress upon that instrument that he quitted his legal master and adopted music as a profession. The first notice his father had of this circumstance, was when on one occasion happening accidentally to call at the house of a neighbouring gentleman, he found to his surprise and consternation the young Thomas Augustine playing leading violin with a party of musicians. This incident decided the fate of Arne. The world gained a musician of much taste and delicacy of feeling, and lost perhaps a discontented pettifogger. Soon after this, Arne discovering that his sister, who afterwards became Mrs. Cibber, had not only a fine taste in music, but a 'sweet-toned and touching' voice, he gave her a course of instructions, and qualified her to appear in Lampe's opera of *Ame- lia*. Her voice and manner took so well with the public, that Arne, then only eighteen years of age, set to music for her Addison's *Rosamond*, in which she personated the heroine, his younger brother supporting the character of the *Page*. Arne's success in his first opera induced him to compose music for Fielding's *Tom Thumb*, which was brought out in 1731. In 1738 he produced the music to *Comus*, which established his reputation as a lyrical composer. In 1740 he married Miss Cecilia Young, a pupil of Geminiani, and went with her professionally to Ireland, where both were well received, he as composer and she as singer. In 1742 he returned to England, and produced two masques, *Britannia* and *The Judgment of Paris*; also *Eliza*, an opera, and *Thomas and Sally*, a humorous after-piece. In 1745 Arne and his wife were engaged by the proprietor of Vauxhall, and here he composed his charming songs, which are now so rarely to be seen, and so greedily sought after by amateurs and collectors in all parts of Great Britain. It was not long after this that he composed his two oratorios, *Abel and Judith*, but they met with no success. His *Artaxerxes*, a free translation by himself from the Artaserse of Metastasio, upon which his

fame as an operatic composer now rests, was composed in 1762, and it met with the most triumphant success. In 1769 the university of Oxford conferred upon Arne the degree of Doctor in Music. After this he composed his opera *The Fairies*, the music for Mason's *Elfrida* and *Caractacus*, additions to Purcell's *King Arthur*, several of Shakspeare's songs, and the *Stratford Jubilee*, besides many glees, catches, and canons. For his excellence as a writer of glees the Catch Club awarded him no fewer than seven gold medals. His song and chorus, *Rule Britannia*, which will live for ever, 'may be said to have wafted his name over the greater half of the habitable world.' Dr. Arne was seized with spasms of the lungs, and died on the 5th of March, 1778. On his deathbed, having been educated a Roman Catholic, he sought consolation from the rites of that church, and his last moments were cheered by a hallelujah sung by himself. Mrs. Arne died about the year 1795. Dr. Arne left an only son, Michael, who evinced a precocious taste for music, but never attained the same eminence as his father. He in conjunction with Mr. Battisill produced the opera of *Alcmena* at Drury Lane in 1764, and afterwards *Cymon* at the King's Theatre, from which he derived both honour and fame. He died without issue, but in what year we have been unable to discover. [J.M.]

ARNOLD, RICHARD, a chronicler, 15th cent.

ARNOLD, SAMUEL, Mus. Doc., was born in London, in the year 1740, and received his musical education at the Chapel Royal, St. James's, from Mr. Bernard Gates and Dr. Nares, who discovered in him the most promising talents. In the year 1760 he became composer to the Covent Garden Theatre, and in 1766 he undertook the duties of the same office at the Haymarket. Dr. Arnold produced four oratorios, eight odes, three serenades, forty-seven operas, three burlettas, besides many overtures, concertos, songs, and smaller pieces, the number of which is not on record. The most popular of his works, several of which still keep their place in public estimation, were *The Maid of the Mill*, *The Son-in-law*, *The Castle of Andalusia*, *Inkle and Yarico*, *The Battle of Hexham*, *The Surrender of Calais*, *The Children in the Wood*, *The Mountaineers*, *The Cure of Saul*, *Abimelech*, *The Resurrection*, and *The*

Prodigal Son. The university of Oxford conferred upon him their degree of Doctor in Music about the year 1773. In 1783, on the death of Dr. Nares, he was appointed organist at the Chapel Royal and composer to the king; and at the commemoration of Handel, which took place in the year following, Dr. Arnold was nominated one of the directors. He succeeded Dr. Cooke as conductor of the Academy of Ancient Music in 1783, and was appointed organist of Westminster Abbey in 1793. Dr. Arnold, who is described as having possessed those personal manners and social virtues which secure esteem, died on the 2d of October, 1802, and was buried in Westminster Abbey. Dr. Arnold married a lineal descendant of the Baron of Merchiston, and left one son and two daughters. [J.M.]

ARNOLD, THOS., a physician, 1742-1816.

ARNOLD, THOMAS, D.D., was born at West Cowes, in the Isle of Wight, on 18th June, 1795. He belonged to a respectable family, his father being collector of the customs in that place, and having been destined for the ministry in the Church of England, was in due time entered a student in the university of Oxford. On completing his college studies in 1819, he obtained deacon's orders, and immediately after took up his residence at Laleham, near Staines, where for the nine following years he kept a private boarding establishment, intended chiefly as a school of preparation for the universities. In the superintendence of this seminary, the character of Arnold rapidly developed itself, and was marked by an indefatigable activity, a manly decision and definiteness of purpose, above all, by a settled religious faith, little to be expected from the indolent and dreamy habits of his youth. He was an eminent Christian, as well as a ripe scholar; and the principles on which he acted with the utmost earnestness himself he infused into the minds of his pupils, by leading them to unite a high standard of intellectual accomplishments with a Christian culture of the heart and affections. The success of this system extended his fame far beyond the obscure and limited locality of Laleham; and in 1827 he became head master of Rugby school, having been nominated to that influential office by a unanimous vote of the trustees, who were told, on high authority, that 'he would change the face of education all through the public schools of England.' That expectation was not long in being realized; for having also obtained the appointment of chaplain to the school at Rugby, in which capacity he preached discourses, which have long been admired as models of sermons for educated youth, he succeeded, while fully sustaining the ancient celebrity of the institution as a classical seminary, in imparting to it a new and Christian tone. The great principle of his educational system was to make his pupils good men as well as good scholars; and accordingly, while labouring to store their minds with useful and elegant literature, he taught them to make religion the daily rule of their life—not to confine it to Sabbath and the church, but to carry it into the school-room, the play-ground, the secular duties and familiar intercourse of every day. The beneficial effects of the method pursued at Rugby led to its general adoption in the other great English schools, and produced a marked improvement on

the religious tone of sentiment and feeling among the young gentlemen who thenceforth repaired to the universities.—The principle of combining religion with secular education, which Dr. Arnold had successfully adopted in his school, he endeavoured to carry out in all that he undertook. Thus he maintained the identity of church and state, realizing a condition of society in which all the laws, institutions, and measures of a Christian country should be based on purely Christian principles. With the same view, he accepted a place in the directory of the London university, which he zealously encouraged, from a liberal desire to extend the benefits of a literary and scientific education to all classes, irrespective of sectarian tests; but he wished to give it a religious character, and failing in his efforts to make examination in the Scriptures necessary for obtaining a degree, he resigned his connection with that institution. In like manner, having attempted in vain to infuse a Christian spirit into the *Penny Magazine*, he established, at his own risk, *The Englishman's Register*—a periodical to which his name and character would probably have gained a wide circulation; but finding that the publication demanded more time than he could spare, he was obliged, after the issue of a few numbers, to relinquish the undertaking.—Dr. Arnold is known as an author by several volumes of discourses, by his *History of Rome*, composed on the principles of Niebuhr, and by various pamphlets on matters of contemporary interest in religion and politics. The government of Lord Melbourne rewarded his public services by appointing him to the chair of modern history in Oxford: but he had only given his inaugural lecture, when a spasmodic affection of the heart suddenly cut him off at Rugby, on 12th June, 1842, in the forty-seventh year of his age.

ATHANASIUS, the great champion of orthodoxy in the fourth century, was born perhaps about 296. His first appearance was in support of his patron, bishop Alexander, against the Arians, and he was not only present, though simply a deacon, at the council of Nice, but was an active and intrepid member of that assembly. His rising fame led to his elevation to the see of Alexandria when Alexander died. Bishop Athanasius was immediately involved in contests, which ended only with his life. Deposed most unjustly in 335, he was reinstated in 338. Deposed again in 340, he was reinstated in 342. His enemies prepared the most unscrupulous charges against him, all of which he refuted with an overwhelming force of proof and eloquence. Again in 355 was he sentenced to be banished, when he retired to the Egyptian deserts, and again was he welcomed back to the Egyptian capital. Once more Julian the apostate exiled him, and once more he was restored. A fifth time was he banished by the emperor Valens, who, however, soon recalled him, and Athanasius, after holding the primacy for the long space of forty-six years, died at length in 373. He was a man of holy life, a bold and noble defender of the Godhead of the Saviour, an orator of ready and commanding eloquence, and a prelate of heroic and indefatigable activity. The prejudices even of Gibbon were softened toward him, and he has pronounced upon him a splendid eulogy—History, chap. xxi. The monks of St. Maur published the works of this illustrious father in three folios, Paris 1698. [J.E.]

ATILIA. This distinguished leader was of Mongol-Tartar origin, and succeeded his uncle as king of the Huns, A.D. 434. At first the sovereign authority was divided between Attila and his brother Bleda, who together invaded Thrace, and compelled the emperor of the East to purchase their forbearance by a heavy fine and annual tribute of gold, A.D. 442. Some three years later Bleda was deposed and put to death, and Attila acknowledged as only and sovereign lord of the nomadic hordes of Hungary and Scythia. This event is only obscurely related, but it was either precipitated, or shortly afterwards followed by the discovery of a sword, the possessor of which acquired a sacred character in the eyes of the Scythian barbarians, who worshipped the god of war under that emblem; in short, it was believed that the divine right to universal empire was bestowed on Attila when this old weapon, which had long been buried in the earth, was placed in his hands; and it was in this faith, added to the love of adventure and the hope of gain, that he succeeded in rallying to his standard nearly all the barbarians of Scythia and Germany. The war, in fact, to which Attila, soon at the head of 700,000 combatants, challenged the whole civilized world, was a struggle for the ascendancy between the free life of the desert and the luxurious settlements which had transferred the sovereign authority to some of the meanest and basest of mankind. The character of Theodosius the younger, emperor of the East at this time, contrasts unfavourably in nearly every point with that of Attila, who was remarkable for his simplicity and general moderation, though subject to gusts of passion, which, with his cruelty in war, well entitled him to be called the 'terror of the world' and the 'scourge of God.' The East, according to some accounts, as far as the plains of Armenia, resounded with the tramp of his armed hosts, and from the Euxine to the Adriatic some threescore and ten cities were given to fire and the sword; while Theodosius, who ought to have protected them with the terror of his arms, was wringing the disgraceful tribute and the means of supporting the equally disgraceful splendour of his court, from his unhappy subjects. Not daring to meet the enemy in the tented field, the emperor, by his splendid promises, engaged one of the members of an embassy from Attila to poison him on his return home, but the miserable man, overawed by the commanding pre-

sence of his chief, confessed the plot; and perhaps the most striking passage in his history is the barbaric scorn with which Attila denounces this attempt of Theodosius as the treachery of a slave towards one whose fortune and virtues had made him master of the world! The death of Theodosius, A.D. 450, and the preparations of Marcian, who replied to the usual demand for tribute, 'that he had gold for his friends and iron for his enemies,' diverted the course of Attila from the East, and pointed to the Western empire. Other inducements to this famous expedition were not wanting. Honoria, the sister of the reigning emperor Valentinian III. had offered her hand to Attila as the means of escape from a cloister to which she had been consigned for incontinence, and Genserici, the king of the Vandals, had solicited his aid against Theodoric king of the West Goths, whose destruction was also a darling object of Attila's ambition. He commenced his march to Italy, A.D. 450, with an immense army of Huns, swelled by the numerous tributaries who owed him allegiance, and, crossing the Rhine, carried devastation through the greater part of Gaul and Burgundy, routing armies and destroying towns in his progress. Meantime the Roman army, under the command of Ætius, strengthened by an alliance with the West Goths, at whose head was Theodoric the Great, and with the gallant Franks, prepared to offer the last resistance of Italy to his advance. The armies met in the environs of Châlons-sur-Marne, when the approach of Attila had already threatened Orleans with destruction, and a bloody conflict ensued, at which the slain has been variously estimated at from one hundred and sixty to three hundred thousand men. Although not routed, Attila was compelled to retreat beyond the Rhine, and was hardly dissuaded from an act of self-destruction which he had contemplated rather than be taken captive. The morrow of the battle discovered to him that he could continue his retreat without molestation, and he returned home only to recruit his forces, and spread equal devastation the year following in the plains of Lombardy. Ravenna and Rome itself now trembled at his near approach, and his retirement, with a vast ransom, from the cities of Italy, has been attributed to a miracle. Between this period and the death of Alaric, A.D. 453, a second invasion of Gaul is mentioned, which proved as destructive to human life as the preceding. The East also was again menaced with a reign of terror, and Italy feared that his threats to compel the surrender of Honoria would yet be executed. These, and the thousand wild apprehensions which prevailed from the east to the west of Europe, while he lived, were allayed by his sudden death, occasioned by the bursting of a blood-vessel, on the night of his marriage with the beautiful Ildico. His wide-spread sovereignty, and the dreaded power of the Huns, died with him; the confederacy of so many barbarous tribes, and the savage enthusiasm with which they ranged themselves under his banner, being alike due to his singular power of command and personal prowess. —It may be observed here, that the Hungarians so called at the present day are not descended from the Huns of Attila, but are chiefly a Majiari race, with a mixture of Roman, Turk, Mongol, Slavonic, and German elements. ATTIRET, J. FR., a French Jesuit missionary and painter, 1702-1768.

ATWOOD, GEO., F.R.S., a writer on mechanics and mathematics, 1745-1807.

ATTWOOD, THOMAS, an eminent composer, was born in the year 1765, and commenced his musical career as one of the children of the Chapel Royal, St. James's, under Dr. Nares and Dr. Ayrton. Happening on one occasion to perform at Buckingham Palace, he attracted the notice of George IV., then Prince of Wales, who took him under his patronage, and sent him at his own expense to Naples in 1783, where he studied for two years under Filippo Cinque and Gætaus Latilla. He afterwards visited Vienna, where he immediately became a pupil of Mozart, from whom he received instructions till the year 1786, when he returned to England, where he soon became one of the chamber musicians to his royal patron, and musical preceptor to the Duchess of York and the Princess of Wales, afterwards the unfortunate Queen Caroline. In 1795 Attwood succeeded Dr. Jones as organist of St. Paul's Cathedral, and in 1796 he was appointed composer to the king. About this period of his life he turned his attention to the composition of music for the stage, and produced several operas, the literary portion of the most of which may be regarded as dead, though the music of many of them is as much admired as it was when first performed. Amongst the most popular of his operas may be named *The Prisoner*, *The Mariners*, *The Adopted Child*, *The Castle of Sorrento*, and *The Smugglers*. The fantastic tricks, and petty vanities of leading performers, disgusted Attwood, and caused him to turn his attention to sacred music, in which he was very successful. For the coronation of George IV. he wrote his anthem *The King shall Rejoice*, and for that of King William III., *O Lord, Grant the King a Long Life*, both of which hold the highest place amongst this class of musical compositions. In 1837 the Bishop of London appointed him without solicitation to the office of organist to the Chapel Royal. He died in 1837, and his remains were buried in St. Paul's Cathedral, beneath the great organ, with every honour that the church and his professional brethren could confer. Many of Attwood's works, and they are very numerous in all the classes, are destined to enjoy a lengthened popularity. His style was founded principally upon that of his great teacher, Mozart, who, according to Michael Kelly, once said, 'Attwood partakes more of my style than any pupil I ever had.' [J.M.]

AUDUBON, JOHN JAMES, a celebrated American ornithologist, was born in Louisiana in 1782. He died in 1851. From his earliest years he was devoted to the study of ornithology, roaming the wild woods of his native country, listening to the song of the singing birds, and picking up from his father all kinds of information about their habits, instincts, and migration. He commenced sketching his favourites while a mere boy; but a few years afterwards, when sent by his father to Paris, he enjoyed the opportunity of having lessons in painting from the celebrated David.—Intended for a commercial life, he entered into partnership with a young Frenchman, and returned to America to carry on their business there. While his partner was keeping the accounts, Audubon was shooting birds in the woods or painting them in the counting-house. At last wearied of the drudgeries of business, he shook the trammels off, and, in spite of the entreaties of his friends, betook himself to a wandering life in the forest. Sleeping by night at the foot of a tree, subsisting on the game which

he shot, and which he cooked for himself; floating down the silent rivers for hundreds of miles in a frail canoe, and sketching from nature as he went along, he accumulated a large collection of faithful and accurate drawings of the feathered tribes of America. These were made the size of life in every case, and he added the details of feet, legs, talons, and beaks, all measured accurately by compass. Not being able to procure subscriptions in America to enable him to publish them, he visited England and Scotland. In Edinburgh he was received enthusiastically; his drawings were admired and highly praised, and there he commenced engraving the figures which have procured him such a high reputation. The publication of this extensive and gigantic work extended over thirteen years; during the intervals of which he continued his journeys to the vast prairies and forests of America, and neglected nothing which could add to its value. If Audubon be indebted to friendly assistance for his descriptions of his birds, his drawings are his own, and his highest claim to admiration is founded upon them, as they exhibited a perfection never before attempted. His work consists of 435 plates, containing 1,065 figures of the size of life, and has been pronounced by Cuvier 'as the most gigantic and most magnificent monument that had ever been erected to nature.' Besides his great work, 'The Birds of America,' Audubon is the author of another, entitled, 'Ornithological Biography.' A second edition of 'The Birds of America' was published in royal 8vo; and before his death he had commenced the 'Quadrupeds of America.' This he has left to be finished by his sons, who continue to prosecute the science in which their father won such fame. [W.B.]

AUGEREAU. PIERRE FRANCOIS CHARLES AUGEREAU, was born 11th November, 1757, in one of the faubourgs of Paris. His father was a working mason, his mother sold fruit. Young Pierre had no education, except that of the Paris streets. He enlisted while a lad; and after some years of service as a private in the French army, he entered the Neapolitan, rose to the rank of sergeant, and was a fencing-master at Naples when the wars of the French revolution broke out. Augereau then returned to France, and joined one of the insurrectionary levies of 1792. He gained his successive steps of promotion on the battle-field; and in 1796, when Buonaparte took the command of the army of Italy, he found Augereau in high repute as a bold and skilful general of division. That reputation was augmented at Millesimo, at Ceva, at Lodi, at Castiglione, at Roveredo, and many more of the scenes of carnage that were so numerous at the close of the last, and at the commencement of the present century. In 1805, Augereau was a marshal of France, and Duc de Castiglione. It is from these facts that Augereau's military talents must be judged, and not from the terms in which Na-

poleon, and the writers of the Napoleonic school have spoken of him. Augereau was not only a furious, but a sincere republican of the revolutionary era, and he gave frequent and deep offence to Buonaparte by the coarse frankness of his language after the establishment of the empire. At last he reproached Napoleon on the battle-field of Preuss Eylau, for the useless butchery to which the French troops were exposed. For this he was sent into retirement, and except a short period of employment in the Peninsula, he was not again intrusted by the emperor with a command till after the disastrous reverses in Russia. Augereau acknowledged Louis XVIII., after Napoleon's abdication in 1814, and acknowledged Napoleon again as emperor in 1815. But he was not employed in the campaign of Waterloo. He was one of the court-martial that was first appointed to try Marshal Ney, and refused to sit in judgment on their comrade. Augereau died in 1816. [E.S.C.]

AUGUSTIN, ANTH., a Sp. prelate, d. 1586.

AUGUSTIN, or AUSTIN, St., called the apostle of England, died 610.

AUGUSTINE, bishop of Hippo, and most famous of the Latin church fathers, was born at Tagasta in Numidia, 13th November, 354. In early life he was loose, roving, and sensual, but at Milen the influence of his mother Monica, and the preaching of St. Ambrose, produced, about 386, a saving and permanent change on his heart and life. He had already left the Manichean philosophy, and now he renounced the study of rhetoric, which he had taught with success at Carthage, Rome, and Milan. He was ordained a presbyter 391, and four years afterwards became coadjutor to Valerius in the diocese of Hippo, now Bona in Algiers, and he finally succeeded his colleague in 396. His life was spent in active literary opposition against Manichaeans, Donatists, and Pelagians. When Hippo was menaced by the Vandal hosts, Augustine died, in the third month of the siege, at the good old age of seventy-six. The influence of Augustine's theology has been felt in all succeeding ages of the church. He compacted the truths of religion into a system, with a logic whose severity is relieved by the glow of his eloquence and the fervour of his piety. His autobiography is contained in his famous 'Confessions;' and his 'Civitas Dei' is universally admired. But he wrote too much, and on too many subjects, to be at all times either lucid or self-consistent. His works are very numerous, and have been often edited and published. The Benedictine edition, Paris, 1679-1701, is in eleven handsome folios. [J.E.]

AUGUSTULUS, the name given in derision to Romulus, last Roman emp. of the West, dethroned and pensioned by Odoacer, 475.

AUGUSTUS, the first Roman emperor, was born at Velitæ, a town of Latium, in the consulship of Cicero, B.C. 63. He was the son of Caius Octavius by Atia, the niece of the famous C. Julius Cæsar; and was consequently the grand-nephew of the dictator. His real name was Caius Octavius; but, in consequence of his adoption by the will of the dictator, he assumed that of Cæsar; and in B.C. 27, he received from the senate the

title of Augustus, the name by which he is now best known. Having lost his father at the age of four years, he went to reside with his grandmother, Julia, who watched over his feeble boyhood with the most assiduous care. From his early years he showed a great capacity, and gave evidence of that prudence and foresight which characterized his subsequent career. On the death of his grandmother, in his twelfth year, he pronounced her funeral oration; and returned to the house of his mother, who, along with her husband, L. Marcius Philippus, henceforth superintended his education. At the age of sixteen he assumed the toga virilis, the symbol of legal maturity; and in the same year was made a member of the College of Pontiffs. The dictator, who had always showed great attention to his youthful relative, now took a more active part in training him for public life, and manifested his affection by the honours which he bestowed on himself, and on the family to which he belonged. Augustus seems to have been present in his camp at the battle of Munda, B.C. 45; and it was here that the dictator made him his heir, and adopted him into the family of the Cæsars. Soon after their return to Rome Augustus was sent to Apollonia in Epirus, for the purpose of advancing his military education, previous to accompanying the dictator in the expedition which he meditated against the Parthians; and it was while here that he was called upon to commence a contest the most arduous perhaps that was ever undertaken by a youth of eighteen. On the Ides (15th) of March, B.C. 44, the dictator was assassinated in the senate house; and Augustus, on receiving the news, set out for Italy with a few attendants. As the adopted son of the dictator, he now assumed the name of Cæsar; and, encouraged by the support of the veteran soldiers, proclaimed his resolution to avenge the death of his father; in other words, to assert his claim to the sovereignty. Appearing before the prætor, he formally accepted the dangerous inheritance of the dictator's name and property; and in the complicated struggle which ensued, played his part with an art which baffled the prudence of the oldest statesmen of Rome. The contending parties first met under the walls of Mutina, when Antony was defeated, and forced to take refuge on the other side of the Alps. In B.C. 43 Augustus was raised to the consulship, notwithstanding the strenuous opposition of the aristocracy; and, finding that his position now rendered a reconciliation with Antony desirable, proceeded to Cisalpine Gaul; and here the celebrated interview took place between Antony, Lepidus, and himself, which resulted in the formation of the second triumvirate—a union which was cemented by the blood of many of the noblest citizens of Rome. About the close of B.C. 42 the decisive battle of Philippi was fought, which completely broke up the party of the senate. During the next nine years Augustus relieved himself of all his formidable opponents, with the exception of Antony, with whom he had long foreseen that the final contest lay. The last struggle took place at Actium, on the 2d of September, B.C. 31, when Antony was totally defeated, and Augustus placed in the undoubted supremacy of the Roman empire. After settling affairs in the East he returned to Rome, B.C. 29, and his arrival

was celebrated by three triumphs on three successive days. In B.C. 27 he affected to propose to the senate to restore the old republican form of government; but at the request of his friends he consented to retain the administration of affairs for ten years; and soon after was invested with the highest military and civil authority, both in the city and throughout the provinces. The same pretended resignation and resumption of power was repeated at intervals till the end of his life. The great events of the period of Augustus belong to the history of Rome, and cannot even be referred to here. After a reign of almost uninterrupted prosperity, he died at Nola, on the 19th of August, 14, and was succeeded by his stepson, Tiberius Claudius Nero. Augustus was a man of middle stature, but well made; and the expression of his handsome face was that of unvarying tranquillity. Though naturally of a feeble constitution, he attained to a great age by a strict observance of temperance in eating and drinking. His early education had imbued him with a taste for literature, which he continued to cultivate throughout his long life; and his liberal patronage of learned men, especially in the persons of Virgil and Horace, has procured the name of the Augustan age for the brilliant period in which he lived.  BABEUF, FRANCIS NOEL, born at Saint Quentin, 1764, and unknown during the first years of the revolution, except for his work on the Registration of Lands, has acquired a memorable place in the history of the Directory, first, by editing the 'Tribune of the People,' and afterwards by conspiring against the government. The principles he advocated were those of absolute equality,

as the apostle of which, at the critical period when the power of Napoleon Buonaparte was just rising, he displayed a singular inflexibility of purpose and good faith. Before the appearance of the 'Tribune,' he had published a work entitled the 'Life and Crimes of Carrier,' which is considered the most impartial account of that inhuman monster. In his Journal, Babeuf took the surname of 'Caius Gracchus,' and it is to his denunciations of all *terrorism*, that we owe the well-known appellation of the system which he denounced. He was arrested in the month of May, 1796, and did not hesitate to make a daring avowal of his ambitious hopes as the chief of a great party. He endeavoured to escape the ignominy of the guillotine by stabbing himself several times with a poignard, secretly conveyed to him by his son, but was dragged bleeding to the scaffold twenty-four hours afterwards, with the instrument of death still ranking in the wound. His object, beyond all doubt, was to overthrow the present constitution of society, and this, perhaps, with the fallacy of his principles, is the worst that can be alleged against him. [E.R.]

BACH, J. A., a jurist, 1721-1759.

BACH, JOHANN SEBASTIAN, one of the most eminent masters of musical science, was born at Eisenach in Upper Saxony, on the 21st of March, 1685. The ancestor of the remarkable family, from which sprang the subject of the following memoir, was Veit Bach, a native of Presburg in Hungary, which city he was forced to leave during the religious struggles of the 16th century.

He ultimately settled at Vechmar in Saxe Gotha, where he resumed his trade of miller and baker, and amused his leisure hours by practising on the guitar. He imparted a taste for music to his sons, and they again to their families, most of whom adopted music as a profession, until they filled all the offices of musicians, organists, and chanters, in their native province. The greatest, however, of the name, and one of the greatest of his age, was John Sebastian, upon whom all writers on music, as well in England as in Germany, have bestowed the most unbounded laudations. Among many others who have left their written opinions of the excellence of this master, it is only necessary to mention the names of Forkel, his biographer, Marpurg, Handel, Matheson, Reichardt, Beethoven, Von Reumar, Mendelssohn, and Friedeman. In 1695 the father of John Sebastian Bach died, and he was left to the care of an elder brother, who does not seem to have possessed that kindly and affectionate nature which, like music, was hereditary in the family. This brother, instead of assisting him in his early studies, did all he could to hinder him from progressing as rapidly as he otherwise would have done. He even destroyed a collection of studies which the young Sebastian, being denied candles, had copied by moonlight. After the death of this brother, Sebastian at a very early period of his life commenced his professional career as a treble singer in the choir of St. Michael's school at Luneburg. In 1703, for reasons not now known, he quitted Luneburg and went to Weimar, where he was appointed court musician, and in 1708 court organist, and director of the concerts to the duke. It was not long after this that he received an invitation to visit Dresden, where Marchand, a celebrated French organist, then held office. A musical contest between this professor and Bach was arranged to take place, but the Frenchman left Dresden through fear of the German artist, whose fame had preceded him. On his return to Weimar, Prince Leopold of Anhalt-Cöthen gave him the situation of chapel master, and in 1723 he accepted the office of director of music at Leipzig, which appointment he held till his death. On one occasion he was invited by Frederick the Great to visit Potsdam, where he was most honourably entertained, and was received with the most marked condescension by that monarch, for whom he composed his world-renowned fugue, under the title of 'The Musical Offering.' This was Bach's last journey. Constant study, frequently for days and nights together, first weakened, then deprived him of his sight. He died of apoplexy on the 30th of July, 1750. Bach composed a great number of works in almost every class of music, and all excellent; but it would occupy too much space to enumerate them here. He was great as a contrapuntist beyond all who went before him, and was no more than equalled by the greatest of his contemporaries. His 'Passionsmusik' and 'Chorales,' or psalm tunes, have always been held in the highest estimation of all his vocal compositions. The first time that any portion of Bach's vocal music was publicly performed in Great Britain was at the London Institution, at the course of lectures delivered by Dr. Gauntlett in the spring of 1837. In the 'German Musical Gazette' for 1823, there

was published a curious genealogical tree of the Bach family, which shows that from Veit there were, down to John Sebastian, who appears in the fifth generation, fifty-eight male descendants, all of whom, according to Forkel, made music their profession.—Among the most famous of the relations of Sebastian Bach may be mentioned, JOHN PHILIPP EMANUEL his son, born in 1714, known as Bach of Berlin, who was chapel master to the Princess Amelia of Prussia. He died at Hamburg in 1788. This composer left upwards of fifty different compositions, several of which were published after his death.—JOHN CHRISTIAN, another son of Sebastian, the date of whose birth has not been published, was known first as Bach of Milan, and afterwards as Bach of London. This composer came to London about the year 1769, and brought out his opera of 'Orione,' which was much admired for the richness of its harmony. He died in London in the year 1782.—JOHN CHRISTOPHER FRIEDRICH, the ninth of the eleven sons of Sebastian, was born at Weimar in 1732. He held the situation of master of the concerts at the court of Buckeburg. He is said to have been the ablest of performers upon the organ and clavier of all his brothers.—WILLIAM FRIEDEMANN, the eldest son of Sebastian, was born in 1710, approached in his compositions most nearly to the singular originality of his father. He died at Berlin in 1784.—GEORGE CHRISTOPHER was a famous composer and singer at Schweinfurt about the end of the 17th century.—JOHN BERNHARD, nephew of Sebastian, was organist at Ordnuff, where he died in 1742.—JOHN AMBROSIOUS, the father of Sebastian, was musician to the town and court of Eisenach, and JOHN CHRISTOPHER, twin brother of the preceding, held a similar situation to the court and town of Armstadt.—JOHN CHRISTOPH, organist to the court and town of Eisenach at the close of the 17th century, was considered one of the greatest masters of harmony and performers on the organ of his time. One of his works, which is still extant, a piece of church music, has twenty obligato parts, 'and yet,' says the biographer of the family of the Bachs, 'it is perfectly pure in respect of harmony.'—JOHANN ERNST, chapel master to the duke of Weimar, was born in 1712, and died in 1781.—JOHANN LUDWIG, chapel master to the duke of Saxe-Meiningen, and composer of church music, was born in 1677, and died in 1730.—JOHANN MICHAEL, brother to Johann Christoph, who composed some good church music, was born at Armstadt in 1660. [J.M.] BACHAUMONT, FR. LE COIGNEUX DE, a Fr. polit., afterwards known as an au., 1624-1702. BACHAUMONT, L. P. DE, a Fr. his., d. 1771. BACHE, B. F., an American journalist, d. 1799. C., a distinguished wr. of works on Russia, historical and other, d. 1806.

BACHOVIVS, REINIER, and his son of the same name, both known as jurists, the latter at Heidelberg, 16th century. BACHOT, GASPARD, a medical writer, 17th c. BACICI, J. B. G., an Italian painter, d. 1709. BACK, ABR., a Swedish naturalist, d. 1775. BACKER, JAC., a Dutch painter, died 1664. BACKER, A., nephew of the preceding, d. 1686. BACKHOUSE, W., a practical alchemist and au., instructor of the cel. Elias Ashmole, 1593-1662. BACKHUYSEN, RUDOLPH, or LUDOLPH, an eminent Dutch marine painter, 1681-1709. BACKUS, AZEL, a theologian, died 1824. BACKUS, ISAAC, a Baptist historian, d. 1806. BACLER D'ALBE, AUBERT L., a military engineer and geographer, 1761-1824. BACMEISTER, a German family of this name has produced many distinguished men, lay and clerical. HENRY, a jurist, 1584-1629. HENRY, the younger, counsellor of Wurtemberg, 1670. JOHN, professor of medicine at Tubingen, 1710. LUCAS, a celebrated Lutheran divine, 1530-1608. His son of the same name, also a theological writer, 1570-1638. The son of the latter, also of the same name, professor of theology, d. 1679. MATTHEW, son of the elder Lucas, a medical author, 1580-1626. SEBASTIAN, an historian, 1646-1704. BACON, ANTHONY, elder brother of Sir Francis, known as a man of letters and political intriguer in the reign of Elizabeth, born 1558. BACON, FRANCIS, Lord Verulam, Viscount St. Albans, Lord Chancellor of England under James I., Author of the 'Instauratio Magna.' The attempt to describe or surround a mind like that of our immortal Englishman, is akin to the effort to survey some grand Power in Nature, whose manifestations are almost infinite in form, and the sphere of whose efficacy is wide as the Universe. The industry of all vast minds is unwearied: nor is it ever safe to say of such, that any one department of labour, or species of activity, belongs to them peculiarly. From early manhood Bacon was immersed in public affairs, intrusted with very onerous functions; in the first rank as Jurisconsult, he moved in the work of reforming and arranging the laws of England; as Statesman he laboured effectively in promotion of the treaty of Union—that foundation-stone of our modern British greatness; in the capacity of Historian he produced the first work in English literature meriting the name of History, viz., his work on the reign of Henry VII.; as Orator and Writer he had no equal in his age—joining to energy and *weight* of expression, a splendour of diction which sometimes may dazzle too much; and *besides* he renovated Philosophy. There are two features only, in a character so various and illustrious, to which we can refer in our brief sketch, viz.:—Bacon's achievements and value in philosophy, and his deserts as a *Man*.—I. The enterprise undertaken by this wonderful Intellect, indicates by its very elevation and comprehensiveness, the capacity of the genius that conceived it. Bacon resolved to rescue science from the deplorable uncertainties and obstructions which then surrounded it—to reconstruct the edifice of human knowledge from its very foundations. Of his projected 'Instauratio Magna,' the works he has left are only fragments; nor could they be otherwise, for the execution of the gigantic plan is

one of the leading tasks delegated to humanity, which cannot be completed so long as the condition of humanity remains a progressive one. The 'Instauratio Magna,' has six main parts:—*First*, Bacon felt it needful to challenge anew for inquiry the respect and dignity that belong to it, to detect the vices of the philosophy prevailing at his time, and to point out the deficiencies requiring to be filled up. Such is the aim of the treatise 'De Augmentis.' *Secondly*, the Remedy had to be discovered; the only certain cure for the evils signalized. This cure is the use of the *true Method*, in the adoption of *observation* and *experiment* instead of *hypothesis*, as instruments for the discovery of fact, and in the substitution in such inquiries, of *induction* for *deduction* or syllogistic reasoning. The principles and processes of the new *method* are elaborately exposed in the 'Novum Organum.' The *third* and *fourth* parts of the 'Instauratio' were planned as an exemplification or instruction in the use of the new Organon; the former, viz., the 'Historia Naturalis et Experimentalis,' being dedicated to the collecting, by aid of observation and experiment, of the greatest possible mass of *facts*; and the latter, the *Scala Intellectus*, to exemplification of discovery by *induction*, of general laws from these facts, and of the application of these general laws by the inverse process of *deduction*, to particular cases comprehended within them. To finish this memorable undertaking, it yet remained that the results of the method, or the truths of philosophy be collected and arranged; but rightly seeing that the discovery of these was not a task he had to accomplish, but a legacy he had to bequeath, Bacon was satisfied with drawing up other two books, the first, or the *fifth* of his plan, named by him 'Anticipations,' and the second or *sixth*, 'Philosophia Secunda Sive Activa,' having reference to applications—to action, or practice.—Such the grandeur of the intellectual Globe which the mind of this Englishman endeavoured to span!—It is in the second division of his great work that Bacon's more positive achievements are unfolded. And it must not be conceived that he is here satisfied with a set of general precepts, or with general statements concerning the value and superiority of his Organon. The new Method of Inquiry, on the other hand, is examined under every light, and its right practice exposed in detail. In the first place, Bacon passes under review all the procedures of observation and every kind of experiment, showing with what special precaution facts must be sought for, and how we may estimate the value of the various sorts of facts bearing on any inquiry. With corresponding pains, and still greater success, he unfolds in the second book of the Organon in what way Induction enables one to detect from the collected facts, the true cause, or the true law of a phenomenon. Having collected by observation all the facts which precede or follow the phenomenon, it is necessary to *exclude* those in whose absence the phenomenon *can* be produced—to notice and separate those others in whose presence it always is produced; and lastly, to select from among the latter class, such facts as vary in intensity when the phenomenon varies, *i.e.*, which increase or diminish in proportion to an increase or decrease of inten-

sity in the phenomenon. In this way, according to Lord Bacon, the true cause is found; and an application to this cause of a similar process, will evolve *its* cause, until in the end we reach supreme causes and universal laws.—In appreciation of these important and memorable labours, we have room for only three brief remarks. *First*, it cannot well be denied that in certain respects Lord Bacon too much decried, or perhaps too little understood the syllogism; and that its peculiar meaning and value, as the only legitimate instrument in Deduction, ought to have preserved it and Aristotle, its immortal author, from the unjust disparagement which one regrets to find upheld by the authority of so great a name. Nevertheless, this injustice to the Greeks, arising partly from defect of critical acquaintance with them, but more from his well-grounded revolt against the deplorable methods sustained in physical inquiry under shelter of their authority, in nowise impairs the edifice Bacon himself reared, or attaches to it any incompleteness. *Secondly*, it is not pretended, with some exclusive and enthusiastic partizans, that previous to the writings of our countryman, no philosopher had sought truths by Induction, or based his inquiries on observation and experiment. It is certainly far from being true that Galileo, for instance, in conducting his immortal researches, pursued an erroneous course, or that although he had studied the 'Novum Organum,' his career of discovery would have been materially different; what is true is this—no one before Bacon had seen the full importance of the experimental and inductive method, had discovered the extent of the sphere of which it is the only legitimate occupant, had explored its principles, and from principles deduced rules for it as an Art. And it is equally true, that every inquiry of value, undertaken since the publication of his inductive code, has been conducted, with or without the consciousness of the Inquirer, according to laws laid down in that code. *Lastly*, since the publication of the inductive code, its laws have been enlarged and greatly particularized, so that—be it said, with perfect respect to the Organon—it is not to our countryman's writings alone that we would point now for full instruction in his own philosophy. The exigencies of the modern sciences, as well of observation as of experiment, have obliged us to refine his processes and multiply his precautions. The doctrine of probabilities enables us to discern the relative values of different classes of facts, with a precision Bacon never dreamt of; and in the writings of modern authors—let us say of *Mr. Mill*—the methods of induction are unfolded with a superior comprehensiveness and effect. But although the advance of the *physical* sciences, caused by the impulse Lord Bacon communicated, has exacted for *them* processes more complete and perfect than his; when, as to the *moral* sciences—as to inquiry, political, ethical, and religious—shall the time arrive in which inquirers shall practically recognize the validity even of the most general precepts in the Organon? The ultimate application of these precepts is sure; but humanity has not yet acquired the strength to accomplish it.—II. The length to which our analysis of Bacon's philosophy has extended, prevents our dwelling much on the character of the Man. Nevertheless, one earnest, though

Brief word, in deprecation of the harshest treatment which, with one exception, has ever been applied to a mind so great. It is a canon we think may be observed absolutely with far greater safety than it ever can be broken—that highest intellect and virtue are most closely allied; nay, notwithstanding appearances, their severance is impossible: certainly no mind like Bacon's, living through its duration amid great ideas, ought to be suspected of voluntary descent to utter meanness, unless on evidence which, concerning transactions of the kind charged against him, has not come down assuredly from that age. Dissimulation, indeed,—corruption, treachery to friendship—it matters not what the mind may be that is guilty of them; the acts are mean, and the mind foul. But the error in the popular judgment lies here—dissimulation and corruption are inferred on the strength of obscure circumstances, and without the necessary inquiry whether—*taking the character of the mind into consideration*—the said acts could possibly signify to it, either dissimulation or corruption? At an *Old Bailey* indeed, or in *Banco Regis*, judgment must be summary; but the Muse of History holds in her hands scales of another order—her question is, *do I rightly understand this Man?* It is passing strange to find Lord Bacon in the guise of an ordinary criminal, and treated with no more than the ordinary courtesy, before Lord Campbell's judgment seat! The errors of Bacon, in so far as they are distinctly established, were mainly those of *compliance*; and it will probably be found that they must be classed among those *involuntary* acts, which connect the best and wisest, through sheer force of circumstances, with the times in which they live;—*involuntary*, inasmuch as they are done because they are usually done, and without rigid examination. Sad it were if through cause of conventional compliances, every eminent personage of our own day might justly be branded as unvarnished, and a hypocrite! Such as he was—since Bacon's time, England has seen no greater and seldom a better Man.

[Statue of Bacon.]

'And be it said he had this excellence,
That undesirous of a false renown,
He ever wished to pass for what he was;
One that swerved much and oft, but being still

Deliberately bent upon the right,
Had kept it in the main: one that much loved
Whate'er in man is worthy high respect,
And in his soul devoutly did aspire
To be it all, yet felt from time to time
The littleness that clings to what is human,
And suffered from the shame of having felt it.'

—Lord Bacon was born in London on 22d Jan., 1560, d. 1626. There have been various editions of his work—the last by *Basil Montague*; but an unexceptionable edition is still a desideratum. [J.P.N.]

BACON, JOHN, an eminent sculptor, the best of whose works are the statues of Dr. Johnson and John Howard in St. Paul's, and the funeral monument of Lord Chatham, 1740-1799.

BACON, NATH., one of the earliest and most valiant patriots of America, educated as a lawyer in England, died 1676.

BACON, SIR NATH., half-brother of Sir Francis, known as a painter, died 1615.

BACON, SIR NICHOLAS, lord chancellor in the reign of Queen Elizabeth, and father of the celebrated philosopher, 1510-1579.

BACON, ANNE, wife of the preceding, known for her trans. from the Ital. and Latin, 1528-1600.

BACON, PH., D.D., a comic writer, d. 1783.

BACON, PH., a naval com., time of Charles II.

BACON, ROBERT, an English monk, influential as a preacher at the court of Henry III., 1233-1248.

BACON, ROGER, a Franciscan monk of the thirteenth century, born near Ilcester in Somerset. This remarkable person, most worthy of the name he bears, failed to be the restorer of philosophy, neither from defect of energy or will, but because the times were not yet ripe. Living at an epoch of intellectual torpor and profound ignorance, and surrounded by men neither instructed nor caring to become so, Bacon, as with the Chancellor afterwards and the great Des Cartes, first grappled with the question, Why is this ignorance? Why is our human Reason a willing captive? The exposition of his reply occupies a large portion of the 'Opus Majus;' and the reply itself is not different in kind from that which in all ages must, by every original thinker, be found to the same question. Irrational deference to Authority; slavish respect for Custom; subjection to popular prejudices, and that vulgar selfishness which induces men to reject as dangerous, or despise as puerile, all knowledge they do not themselves possess,—these are the causes of darkness in all ages: nor can they be overcome unless the independence and dignity of Reason be acknowledged, the influence of authority, custom, and prejudice discredited, and Truth sought through careful and systematic investigation of Nature. And in his quiet cloister near Oxford, the monk wrought out principles and modes of legitimate investigation, and successfully followed them. If not entitled to take rank as the founder of experimental philosophy, Roger Bacon was unquestionably the earliest philosophical Experimentalist in England. He recognized as fully as Francis, the importance of experiment as distinguished from deduction: and he had this immense advantage over the Chancellor—he joined example to precept, and put in use, before his contemporaries, his own counsels. It is interesting to reflect on the amount of actual discovery which rewarded so much laborious research. Bacon made signal advances in optics; he was an excel-

lent chemist, and in all probability discovered gunpowder; nevertheless, it is on his clear discernment of true *Method* that his fame must rest. During his unswerving pursuit of knowledge he encountered the usual oppositions, and a share also of encouragement. Pope Clement IV. aided and cheered him; but after the death of this protector the smothered jealousy and dislike of the Franciscans broke forth,—the mean and the weak are of course ever the readiest and fiercest persecutors. It is at once unjust and unwise to consider errors and crimes of this sort as exclusive attributes of the Romish church; their root, on the contrary, lies deep in the heart of man. The domain of physical inquiry is now wholly safe from the disorders of intolerance; but there are large departments of knowledge within which Reason is still not free, where authority abides on its throne, and popular prejudice stores up its thunderbolts. BAENGIUS, P., a Swedish historian, 17th ct.

BAERSIUS, H., a mathematician, 16th cent.

BAERSTRAT, a Dutch painter, died 1687.

BAFFIN, WILLIAM, a skilful English navigator of the 17th century, deserving honourable mention as the first who applied observations of the heavenly bodies for the determination of the longitude at sea. Rules for the practice of the method which he employed are given in his account of the fourth voyage of James Hall, whom he accompanied to the coast of Greenland in 1612, probably in the capacity of pilot. Nothing is known of his history prior to this date. In 1613 he commanded a whaling ship in the sea of Spitzbergen. In 1615-1616 he went as mate with Robert Bylot, on two voyages, whose object was the discovery of a N.W. passage. In the second of these, the extensive bay named after him (which should now be termed a sea, since it is known to open northwards), was discovered, and in great part traced. He wrote an account of these voyages also. Many of his statements are important, and highly suggestive. He calculated the horizontal or maximum refraction at 26'; the present estimate is 32' or 33'. In 1618 we find him mate of a merchant vessel in the Arabian sea. In 1621 he was killed at the siege of Kismis, a fort near Ormuz, while engaged in an English expedition co-operating with the Persians, in endeavouring to drive the Portuguese out of the Persian Gulf. BAGLIVI, G., a medical writer, 1667-1706.

BAGNATI, an ascetic writer, 1651-1727.

BAGNIOLI, J. C., an Italian poet, died 1600.

BAGOAS, the murderer of Artaxerxes Ochus, king of Persia, put to death B.C. 356.

BAGOPHANES, gov. of Babylon, time of Alex.

BAGOT, LEWIS, bishop of Bristol, &c., author of Sermons on the Prophecies, 1740-1802.

BAGRATON, K. A., a Russian commander, killed at Moscow, 1812.

BAGSHAW, CHR., an English catholic, and ecclesiastical historian, died at Paris 1626.

BAGSHAW, ED., a political writer and partizan of the Royalists, died 1662.

BAGSHAW, ED., son of the preceding, assistant of Dr. Busby, died 1671.

BAGSHAW, H., another son of Edward, author of Sermons, &c., died 1709.

BAGSHAW, WM., a religious writer, d. 1703.

BAHA-ED-DOULAH, son of Adad-el-Doulah, shah of Persia 989, died 1012.

BAHALL, an Arabian grammarian, died 842.

BAHIER, J., a French poet, died 1707.

BAHRAM, or BEHRAM, I., king of Persia, 272-276. BAHRAM II., 276-293. BAHRAM III., reigned four months, 293. BAHRAM IV., 383-393. BAHRAM V., 421-440.

BAHRDT, C. F., a German divine, died 1792.

BAIAN, AND., a native of Goa, converted to Christianity, and ordained as minister 1630.

BAIER, J. G., a botanist, 1677-1735.

BAIER, J. W., a German divine, died 1694.

BAIF, LAZARUS, a French ambassador and author, time of Francis I., died 1547.

BAIF, J. A., son of Lazarus, distinguished as a poet, founder of an academy, 1570.

BAIL, LOUIS, a French divine, 17th century.

BAILEY, NATHAN, a lexicographer, d. 1742.

BAILEY, PETER, a miscellaneous wr., d. 1823.

BAILEY, WALKER, a medical author, d. 1592.

BAILIE, LIEUT.-COL., distinguished for his gallantry in the last war, 1778-1836.

BAILLET, ADRIEN, a Fr. critic, 1649-1706.

BAILLIE, JOANNA, was born in 1762, at Bothwell, in Lanarkshire, of which place her father was the parish minister. Her mother was sister of John and William Hunter, the famous anatomists. Her life was spent in domestic privacy, and marked by no events more important than the appearance of her successive works. Her brother, who became Sir Matthew Baillie, having settled as a physician in London, Miss Baillie removed thither at an early age. She resided in the metropolis, or its neighbourhood, almost constantly, and died at Hampstead in February, 1851. Her first volume of dramas was published in 1798. Their design, as to which it is not too much to say that the works were good in spite of it, not by means of it, was indicated in the title: 'A Series of Plays, in which it is attempted to delineate the Stronger Passions of the Mind, each Passion being the subject of a Tragedy and a Comedy.' A second volume of the 'Plays of the Passions' appeared in 1802, and a third in 1812. The tragedies are fine poems, noble in sentiment, and classical and vigorous in language. But they were not fit for the stage; and 'De Montfort' itself was with difficulty supported for a while by the acting of John Kemble and Mrs. Siddons. The tragedy of 'The Family Legend,' not contained in the series, was acted in Edinburgh in 1809, after a visit the poetess had paid to Sir Walter Scott. In 1836 she published another series of 'Plays of the Passions,' of which 'Henriquez,' and 'The Separation,' the former a very striking piece, were attempted on the stage. Some of Miss Baillie's small poems were exceedingly good. [W.S.]

BAILLIE, COLONEL JOHN, distinguished as a negotiator in the East Indian service, d. 1833.

BAILLIE, MATT., D.D., an anatom., d. 1823.

BAILLIE, ROBERT, a minister and delegate of the Scotch Church, died 1662.

BAILLIE, ROCHE, better known as La Rivière, a celebrated empiric and astrologer, died 1605.

BAILLOD, DAV., a Swiss writer, 16th century.

BAILLON, EMAN., a naturalist, died 1802.

BAILLOU, WM. DE, a physician, distinguished as 'The French Sydenham,' died 1616.

BAILLY, DAVID, a painter, 17th century.

BAILY, JEAN SYLVAIN, celebrated because of his attachment to science; still more through his

eloquence as the Historian of Astronomy; most of all on account of his connection with the unfolding of the first or great French revolution, and his melancholy fate. Baily was born in Paris in the year 1736; in 1790 he presided as mayor of Paris at the *Champ de Mars*, over that vast assemblage when the united French people hailed the supposed commencement of the Reign of Liberty and Universal Brotherhood; in 1793 one of countless illustrious victims he perished on the scaffold. In his attachment to the cause of rational liberty Baily was constant through all calamity: it was not desire of fame, nor the thirst to overthrow, that led him towards the front ranks of the Revolution; so, through abiding faith in humanity, he died without the shame of relinquishing his early principles and hopes, merely because the effort to realize them had brought evil to himself.

—Baily's History of Astronomy is still very fascinating: as a strictly philosophical work it does not answer the highest ends,—he was led astray by the then novel and false doctrine of the value of some ancient and forgotten knowledge. As a technical History it is supplanted by the laborious, but yet very insufficient history of *Delambre*. [J.P.N.]

BAILY, FR., the celebrated astron., 1774-1844.

BAINBRIDGE, CHR., an English diplomatist and churchman, made a cardinal 1511.

BAINBRIDGE, DR. JOHN, an eminent physician and professor of astronomy, 1582-1643.

BAINBRIDGE, WM., an Amer. capt., d. 1833.

BAINE, MICH., a theologian, 16th century.

BAINES, EDWARD, the distinguished member of parliament, b. 1774; representative of Leeds, 1833 to 1840; died 1848.

BAINES, R., a Hebrew scholar, 16th century.

BAION, a French naturalist, last century.

BAIRD, GENERAL SIR DAVID, distinguished by his services in the East Indies, in the expedition by which the Cape of Good Hope was taken, and subsequently at Corunna, where the command of Sir John Moore devolved upon him: entered the army as an ensign, 1772, died 1829.

BAJARDI, an Italian jurist, 16th century.

BAJARDO, an Italian painter, died 1670.

BAJAZET, or BAYAZID, proclaimed sultan on the field of battle 1390; after overrunning Greece, he defeated Sigismund of Hungary and the crusaders 1395; conquered and made prisoner by Tamerlane 1402, died 1403.

BAJAZET II., succeeded 1481; after sustaining a long conflict with the Christian powers, and conquering Moldavia, Bosnia, and Croatia, he was poisoned by his second son Selim, who usurped the throne over Achmet, 1512.

BAJAZET, the original of one of Racine's heroes, was a son of Achmet I., strangled by his brother Amurath IV., 1655.

BAJOLE, J., a French historian, died 1650.

BAKE, LAUR., a Dutch poet, died 1714.

BAKER, DAVID, a monastic writer, died 1641.

BAKER, GEOFF., a monastic historian, 1347.

BAKER, SIR G., a physician and antiquarian, born 1722, a baronet 1776, died 1809.

BALZAC, JOHN LOUIS GUEZ DE, an elegant French author, 1594-1654.

BALZAC. This name, borne in the first half of the 17th century, by one of the classics of French prose, has again been made celebrated in our own day, by one of the most vigorous, original, and prolific of French novel writers. **HONORE DE BALZAC** was born at Tours, about 1799. He came to Paris when a very young man, and was thenceforth engaged constantly in the toils and excitements of authorship. For several years he was very obscure; and the only separate works which he then published, bore the assumed name of Horace de St. Aubin. In 1829 there appeared, with his real name, his romance of 'La Peau de Chagrin,' which at once gained him a celebrity that never afterwards flagged. This striking story exhibits, not only Balzac's extraordinary power of impressive representation, but some of the most marked characteristics of the school to which he belongs, and in which, if he is not equal to Victor Hugo, he is much superior to Dumas, and still more to Sue and De Kock. They luxuriate in characters and incidents which are horrible, rather than genuinely tragic; and, when they condescend to profess a moral aim, they mar it by the gratuitous grossness which they throw into the details of the execution. The story of 'The Shagreen Skin' tells how a young ruined gamester, about to throw himself into the Seine, is rescued by a sorcerer, who gives him a talisman, consisting of a piece of shagreen. The possession of it ensures him the gratification of every wish he chooses to form; but with every gratified wish the skin shrinks in size, and when it is quite wasted away the possessor dies. In another story, 'El Verdugo,' a young Spaniard beheads his parents, and his brothers, and his sisters, by common consent; life being offered by a French general to any one of the family who will be the executioner of the rest. There is less of exaggeration, with very much of intense interest, and of sternly accurate dissection of social vices and evils, in several of the best of Balzac's other novels. They are far too numerous

to be named. It may be enough to refer to 'La Femme de Trente Ans,' and 'Le Père Goriot.' Balzac attempted the drama likewise, but with little success; and he was an active contributor to the 'Revue Parisienne,' and other periodicals. After the revolution of 1848 he contemplated writing romances of military life, and travelled to collect materials. He died at Paris in Aug. 1850. [W.S.]

BANKS, THOMAS, a sculptor, 1735-1805.

BANKS, SIR JOSEPH, Bart., a celebrated botanist and traveller, was born in London in 1743.

He died in 1820. Inheriting at an early age an ample fortune, he resolved in order to gratify his love for botany, to visit foreign countries at that time little known to naturalists. For this purpose he made a voyage to Newfoundland and the coast of Labrador; he accompanied Captain Cook in his celebrated voyage of discovery to the South Seas; he visited the coasts of Scotland, and spent some time in Iceland. Banks never published any account of the vast collections of objects of natural history he had made; still they were not lost to science. Fabricius described his insects; Bruns-sonet his fishes; Gaertner profited by his fruits and seeds; Robert Brown's Prodrromus of the plants of New Holland was composed in the midst of his herbarium; and many other botanists owe him similar favours. Our parks and gardens are indebted to Banks for many fine new trees and shrubs from New Holland; our colonies for a variety of the sugar cane from Tahiti, richer in sugar, and which admits of more frequent cropping; and our commerce for the flax of New Zealand, which promises to be of such importance to our navy. In 1777 he was elected president of the Royal Society; soon afterwards created a bart., a K.B., and a member of the privy council. He was a great favourite with George III., who was fond of botany and agriculture. His wealth and position in society enabled him to become the patron of science in his native country, and during the long war which embroiled all Europe, he was ever ready to assist, both by his purse and advice, scientific men of all nations. Many a man of science has

been indebted to his generous liberality, and ten different collections of objects of natural history made for the Garden of Plants, which had fallen into the hands of our cruisers, and brought to England, were saved by his interference, and in several instances, at his own expense, safely transmitted to Paris. His published memoirs are few in number, and not of any great importance, yet his name remains intimately connected with the history of science. He presided for 41 years over the Royal Society; and at his death he bequeathed his herbarium and splendid library of books of natural history to the British Museum, where they remain monuments of his patriotism, talent, and assiduity. BARBATELLI, an Italian painter, died 1612.

BARBAULD, ANNE LÆTITIA, chiefly celebrated for her 'Prose Hymns,' and 'Early Lessons' for children, was the daughter of the Rev. John Aikin, a dissenting minister resident in Leicestershire, where she was born on the 20th of June, 1743. While a child she was remarkable for quickness of intellect, no less than for the natural goodness of her disposition; and in later years for the elegance of her taste, the extent of her acquisitions, and her skill in classical literature. For these advantages Miss Aikin was greatly indebted to the affectionate zeal with which her father cultivated her talents, and in some measure to the literary circle into which he was able to introduce her on removing to Warrington, where he took charge of the celebrated school in 1758. After fifteen years of quiet seclusion, passed in these academic shades, Miss Aikin was induced to publish a volume of miscellaneous poems, which appeared therefore in 1773, and met with the most flattering success. In the spring of the following year she became the wife of the Rev. Rochemond Barbauld, with whom she opened a school in the village of Palsgrave, Suffolk; and took an active and influential part in its management as teacher of composition, and the graceful exercises of reading and speaking. Here they continued to reside for the next eleven years, and it is to this period that we are indebted for the works first alluded to, and for some devotional compositions. Mr. and Mrs. Barbauld then visited the continent for a short time, and on their return home, the former became pastor of a small congregation at Hampstead, where the subject of our notice resumed her pen; first in the interest of the dissenters on the repeal of the Test and Corporation Acts, and next in a poetical address to Mr. Wilberforce, suggested by the rejection of the slave bill. These spirited appeals were followed by some religious essays, the most remarkable of which is a singular discourse for the Fast-day of 1793, entitled 'The Sins of the Government the Sins of the Nation.' In 1802 Mr. Barbauld became minister of a congregation at Newington Green, where he died in 1808, and in this neighbourhood his widow resided till her death in 1825, enjoying the company of her brother, and literary friend, Dr. Aikin. The simplicity of Mrs. Barbauld's life and manners, the refinement of her imagination, and the purity of her soul, are well represented in the works which have rendered her name a household word in England, and to which the cause of education is so much indebted. The versatility of her talents is shown in the critical and biographical notices with which she amused herself in the early period of her residence at Stoke Newington, which include a selection of papers from the 'Spectator,' and similar classics, published in 1804, and an edition of the 'British Novelists' in 1810. Her last publication was a remarkable poem, named from the year preceding its appearance, 'Eighteen Hundred and Eleven.' Her collected works were published soon after her death, with a memoir by her niece, Miss Lucy Aikin; and the day is probably far off when her 'Early Lessons' will be superseded by anything superior of the same class. BARCLAY, JOHN, son of the preceding, distinguished as a satirist, 1582-1621.

BARCLAY, ROBERT, the celebrated Apologist, was born in 1648, at Gordonstown, county of Moray, and descended from an ancient and honourable ancestry, who for centuries had flourished in the North of Scotland. The unsettled state of things at home induced his father, Colonel Barclay, to send him at an early age abroad, and accordingly he received the greater part of his education at Paris, under the superintendence of his uncle, who filled the office of rector in the Scots College. His parents being led from circumstances to apprehend that familiarity with continental manners might produce in their son a disposition favourable towards the Roman Catholic religion, recalled him to his native country, where he appeared an accomplished youth, and combining the advantages of a liberal education with great natural abilities, he rapidly rose to distinction. His family having embraced the principles of the Quakers, he was persuaded ere long to follow their example, and in conforming to the peculiarities of a sect which was held in great disrepute, particularly in Scotland, he felt himself laid under a necessity of vindicating that course by the publication of several treatises in their defence, characterized by great variety of learning, as well as power of argument. His first work, which was published

in 1670, was entitled 'Truth Cleared of Calumnies,' and appeared in the form of a controversial pamphlet, in answer to an attack on Quakerism by the Rev. Wm. Mitchel, a minister of the Church of Scotland. His next publication, which was issued in 1673, was a Catechism and Confession of Faith, containing an exposition of the principles of his religious communion; and to this he soon after added his 'Theses Theologicae,' or Theological Propositions.—Becoming enthusiastically attached to the cause of Quakerism, which he identified with that of truth and the best interests of humanity, he resolved on devoting his future life to its extension in the world; and with this view, he in 1676 accompanied William Penn in a tour of propagandism through England, Holland, and Germany. It was while sojourning at Amsterdam, in the course of those peregrinations, that he published the great work which had long occupied him, and on which his fame chiefly rests—'An Apology for the True Christian Divinity, as the same is preached and held forth by the people in scorn called Quakers.' This treatise was originally published in Latin, but was speedily translated into most of the languages of Europe, and while it greatly extended the reputation of its author, the principles it advocated became the subject of keen and prolonged agitation. Barclay, on his return to his native country, suffered much from the severe edicts issued against the nonconformists of the period, being imprisoned five months in Aberdeen, besides other petty kinds of persecution in the form of obloquy and fines. His high character, however, for sincerity, as well as for talent and learning, carried him triumphantly over all opposition, and latterly he enjoyed much distinction, being honoured with an introduction to the English court, and the partial regards both of Charles II. and his successor, James II. Through the royal favour he received a commission as governor of East Jersey for life, whence he several times returned to visit his native land, and it was in 1680, the last visit he paid, he was seized with fever, and died amongst his relatives, at Ury, in Aberdeenshire, in the forty-second year of his age. He failed in the object, but made some important additions to geography. Bear, or Cherry island, and Spitzbergen were discovered by him; the latter, in 80°, was found to have good herbage and herds of deer, while Nova Zembla, in 76°, was a barren waste. Suddenly enclosed by ice on the coast of Nova Zembla, on 26th August, 1596, Barentz was obliged to remain on this inhospitable shore till the following summer, and was thus the first navigator who wintered in the Arctic regions. He left the island on the 14th June, with a crew of fifteen persons, in two small boats, his ship being disabled. He died from fatigue on the 20th; but the adventurous survivors held on their perilous voyage—the most extraordinary on record—and traversing a stormy ocean filled with floating ice, exposed to the extreme of cold, famine, and sickness, and to frequent attacks from bears borne along upon the ice islands, or pursuing them through the water, they reached in six weeks the port of Kola, in North Lapland, a distance of 1600 miles. Here they found three ships from their own country. [J.B.]

BARNAVE, A. P. J. MARIE, by profession an advocate, was born 1761, and distinguished in the parliament of Grenoble during the first ominous struggle against the despotic administration of Loménie-Brienne. Deputed to the states-general by the province of Dauphiné in 1789, his eloquence, and his almost wild enthusiasm in the popular cause, marked him out as the rival of Mirabeau, and when the latter favoured the court, as his most dreaded adversary. One of a memorable trio, his characteristic talent is well expressed in the epigram pointed at them: 'Whatsoever these three have in hand, Dupont *thinks* it, Barnave *speaks* it, Lameth *does* it.' His love of justice, in the abstract, was carried to a reckless extreme in his decrees, as a member of the diplomatic committee for the reorganization of the colonies, and their fatal effects led him to abandon the system, though Siéyès and Robespierre denounced his inconsistency as a treason. A member of the famous Jacobin Club, he fought a duel with the royalist Cazalès, who had denounced the patriots as 'sheer brigands,' but neither of them received any serious injury. Like many others, his enthusiasm for the revolution was saddened and cooled down as he reflected upon the disasters which had accompanied it, and his return to moderate counsels was hastened by the situation into which he was momentarily thrown by the flight of the royal family, and their arrest at Varennes. Appointed with Péthion and Latour-Maubourg to secure the king's return, Barnave rode in the carriage with the Queen and Madame Elizabeth, and touched by their distress, his conversion to the principles of a constitutional monarchy was completed. He was now denounced by the Journalists as a deserter of the popular cause, and at the close of the session returned to private life, in his native town of Grenoble, where he married the daughter of an advocate. In August, 1792, he was arrested on a charge of conspiring with the royal family, with whom it was alleged he had held treasonable correspondence ever since the arrest at Varennes, and after a confinement of five months, conducted to Paris, and condemned by the revolutionary tribunal of Tinvillé. The effect of his eloquence on this occasion was such as to move even his sanguinary judges, and his friend Camille Desmoulins wept on hearing his last words. Arrived at the scaffold, he raised his eyes to heaven: 'Behold, at length,' he exclaimed, 'the reward of all I have done for liberty!' He was executed in 1793, at the early age of thirty-two; and has left behind him a character remarkable indeed for indiscretion, but equally so for its honesty of purpose; and a name, as an orator, scarcely surpassed by any in the revolutionary annals. [E.R.]

BARNES, JOSHUA, a friend of the famous Dr. Richard Bentley, was a native of London, where

he was born in the year 1654. His rudimentary education he received at Christ Church Hospital, whence he was removed to Emmanuel College, Cambridge. There he devoted himself to the study of classical literature with so great assiduity and success, that he rose to eminence as a Grecian;—his knowledge of the language of ancient Greece, however, being more minute and accurate than comprehensive, more limited to the niceties of the grammarian, than based on the enlarged and liberal views of the philologist. His reputation procured him the appointment of Regius Professor of Greek at Cambridge in the year 1695; in 1700 he changed his state by forming a matrimonial alliance with a Mrs. Mason of Hemingford, a wealthy widow, and by means of the fortune acquired by his marriage with this lady, he was enabled to bear the expenses of his edition of Homer. That work was published in 1710. The sale, however, was not such as to remunerate him, for in 1711 he applied, though unsuccessfully, to Lord Harley for preferment in the church, in a series of letters setting forth his claims, which are preserved in the Harleian collection. He died in 1712, and was buried in Hemingford churchyard, where his widow erected a monument to his memory. His works, which are now forgotten by all but a few scholars, were very voluminous. The following may be considered a correct list of them in the order of publication:—*Sacred Poems*, 1669; *The Life of Oliver Cromwell*, *The Tyrant*, an English poem, 1670; *Xerxes*, and other dramatic pieces in English and Latin; a Latin Poem on the Fire in London and the Plague; a Latin Elegy on the Beheading of John the Baptist; *Estheræ Historia Poetica Paraphrasi*, 1679; *Select Discourses*, 1680; *The History of Edward the Third*, 1686; an edition of Euripides, 1694; a Discourse on Matthew ix. 9; an edition of Anacreon, 1705; an edition of Homer, 1711, 2 vols. BARRAS, LOUIS, Count, a naval commander, died a short time previous to the revolution.

BARRAS, PAUL FRANCIS, Count De, was born of a noble French family of Provence, of whom it was proverbial to say, 'Noble as the Barrases, old as the rocks.' He was successively member of the convention and directory, and played an important part in the progress of the French revolution. As early as the year 1775, when twenty years of age, he sailed for the Isle of France with the rank of second lieutenant, and was shipwrecked on the

Maldivé Islands. After this he is found at Pondicherry, then invested by an English army, and peace being concluded, returns to France, ready to share in the political troubles of 1789. He is represented at this time as a man of reckless and dissipated habits; subject to fits of courageous impulse; tall and handsome of person, and of yellowish complexion: in regard to mental character, remarkable for the practical quickness of his apprehension, and singular presence of mind under emergencies. Fired with the prevailing enthusiasm in favour of reform, or seeing the means of repairing his shattered fortunes, and satisfying his restless spirit in the career it opened to him, he presently declared against the court, and was admitted a member of the famous Jacobin Club. From 1790 to 1792 we find him in the office of administrator for the department of the Var, and some other public employments, including that of commissary for the army of Italy. As a member of the convention in 1792, he voted for the king's death, and declared against the Girondins. In 1793 he was sent to the south of France, and commanded the left wing of the army besieging Toulon, where he became acquainted with Napoleon, then captain of artillery in the same operations. When the savage excesses committed by the commissioners and soldiers of the convention on this and similar occasions became the subject of remonstrance in Paris, Barras and Fréron were exempted from the general imputation, and it was only the popularity and audacious bearing of the former that deterred Robespierre from laying hands upon him. As the reign of terror drew near its close, and Henriot menaced the convention with his troops, Barras was intrusted with its defence, and it was he who seized Robespierre and conveyed him to the scaffold. The vigorous measures which he now adopted against the party of the Mountain, gained him the appointment of general-in-chief, decreed unanimously by the convention; and the merit belongs to him of engaging Buonaparte in the public service on the famous 13th Vendémiaire, (4th October, 1795,) when the revolt of Lepelletier was suppressed, and soon afterwards the government of the directory established, of which Barras was one. Residing in the Luxembourg palace, he affected almost royal pomp, and for a while exercised a marked ascendancy over his coadjutors; but their subsequent dissensions, and the intrigues of a formidable party, at the head of whom was the notorious Siéyès, gradually sunk them in public esteem, and prepared for the return of Buonaparte from Egypt, and his sudden elevation to the consulship. Barras is accused of conspiring with the English government for the restoration of the Bourbons, and this for the vilest of considerations, yet he hailed with apparent joy the advent of the illustrious soldier to whom he had first opened the path of preferment. Without recounting the petty intrigues of his later years, it is sufficient to say, that his public career—the mingled good and evil of his political life—closes with this epoch. For whatever reason, he obstinately refused the employments that were offered him through the agency of Talleyrand, and at last died in retirement on the 29th January, 1829. [E.R.]

BARRE, WILLIAM VINCENT, a Fr. refugee, au. of a hist. of the first consulate, com. suicide 1829.

BARRERE, P., a French naturalist, d. 1755.

BARRERE DE VIEUZAC, BERTRAND, 'The Anacreon of the Guillotine,' as Burke styled him, is one of the most sinister and conspicuous characters of the French revolution, more especially as a member of the Committee of Public Safety during the reign of terror. He was born at Tarbes in Gascony, 1755, and being educated for the bar, met with considerable success as a youthful advocate at Toulouse, besides being admitted a member of the Academy of Sciences for his literary attainments. In 1785 he married a lady of fortune, and it may here be remarked, that his private virtues have been extolled in singular contrast with his perfidious conduct in public life; to which anomaly, perhaps, his moral weakness, and the brilliant talents which made him ashamed of it, and caused him to assume the airs of a bravo without the heart of one, among his more atrocious, or to say the least, less polished colleagues, may be in some measure the key. In 1789 he was sent to Paris, as the representative of his own province in the 'Third Estate' of the 'Etats Généraux,' and took his place with the more moderate reformers. At this period he published a journal entitled 'Le Point du Jour,' and acquired a high degree of popularity by his eloquence both as editor and representative. At first loyal to the king, he was gradually carried away by the rising tide of republicanism, and we find him, on the 17th June, in the ranks of those who provoked the revolution by which the commons of the third estate constituted themselves a national assembly. When this body at length separated, Barrère was appointed a judge in the High Court of Appeal, and in 1792 deputed to the National Convention for the department of the *Hautes Pyrénées*; acting as president, in fact, when the king was interrogated, whose situation in bygone times had excited his most compassionate feelings. From this time he became the mouthpiece of the Jacobins, and voted for the death of the king with the observation, so often since repeated, 'L'arbre de la liberté ne croît qu' arrosé par le sang des tyrans,' (the tree of liberty only grows when watered by the blood of tyrants.) On the 1st of April, 1793, he was elected on the Committee of Public Safety, and constantly acted as the reporter of its projects to the convention, in which employment his ingenious plausibility, and facile wit, were of essential service to those who had else stood grim and stark in the midst of their atrocious conceptions. It was Barrère who created the revolutionary army by the memorable decree, — 'All France, and whatsoever it contains, of men or resources, is put under requisition;' and who gave for the motto on their banners, 'Le peuple Français debout contre les tyrans,' (The French people risen against tyrants!) It was he who denounced Danton on the one hand on a charge of too much moderation, and Hébert on the other for his anarchic doctrines; who stereotyped the scenes of greatest horror in a joke or an epigram, as when he said, — 'Il n'y a que les morts qui ne reviennent pas,' (It is only the dead who do not come back again.) His fear of breaking with Robespierre made him the instrument of cruelties which he jested upon, and which he endeavoured to hide under the conceits in which he clothed them, while his heart

revolted; and if the absence of all principle is rendered more conspicuous in one circumstance than another of his public career, it is in the haste with which he moved the execution of the fallen dictator without trial on the 9th Thermidor; scarcely four-and-twenty hours after he had fawned upon him. The disgusting facility of his conversion did not prevent the reaction affecting himself, more especially as he proposed the continuation of Fouquier Tinville in his office of public accuser. The result was, his trial and condemnation at the bar of the convention, the fall of which, and the political complications of the period, favoured his escape and concealment until the amnesty which followed the 18th Brumaire enabled him to return to Paris. He now presented himself to the senate as a candidate for admission into the legislative body, but Napoleon mistrusted him, and he disappeared till 1815, when he turned up as a member of the chamber of representatives during the hundred days. At the second restoration of the Bourbons, he was compelled to retire by the royal ordinance which expelled the regicides, and resided at Belgium till the revolution of 1830, when he once more returned to his country, and died 1841. He is the author of numerous political and historical works, besides the 'Point du Jour,' and an anti-British journal, entitled the 'Argus,' published under the imperial government. His own memoirs have been published by MM. Hipp. Carnot, and David, in 4 vols. 8vo. [E.R.]

BARROS, JOHN DE, a Portuguese his., d. 1570.

BARROW, DR. ISAAC, celebrated both as a mathematician and a divine, was born in London, in 1630. He was sent at an early age to the Charterhouse School, where, however, his quarrelsome temper, pugnacious habits, and proverbial idleness, occasioned great annoyance to his teachers, as well as deep dissatisfaction and pain to his family. On his removal from that institution to Felsted in Essex, he began to show a better disposition; for applying himself to his studies with spirit and indefatigable industry, his progress was so rapid, and his attainments in various departments of learning so high, that his master appointed him tutor to Viscount Fairfax, of Emely in Ireland, who was at this school. His father, who had early destined him to a learned profession, entered him, in 1645, a student of Trinity College, Cambridge. But his fortune having been greatly injured through his attachment to the royal cause, young Barrow would have been destitute of the means to continue the expensive style of living at that university, had it not been for the liberality of the famous Dr. Hammond, who gave him the benefit of his valuable friendship, and through whose influence he, in 1649, obtained a fellowship in the college. Having finished his literary and philosophical course, he directed his studies with a view to the practice of medicine, and made great proficiency in the subsidiary sciences of anatomy, botany, and chemistry. But,

by the counsel of his uncle, bishop of St. Asaph, and his own growing convictions of the duty imposed on him by his oath as a fellow, he withdrew from the further prosecution of those sciences, and devoted himself to the study of divinity, retaining, however, his strong predilection, and earnest pursuit of mathematics. Disappointed in his hopes of obtaining the Greek professorship, he resolved to dispel his chagrin by visiting the continent, but was so poor at the time, that to meet the expense of his travels he had to dispose of his books. In 1660, he was chosen to the Greek chair at Cambridge; and in July, 1662, he received another appointment more congenial to his tastes, that of geometry professor in Gresham college, London. In 1663, he received the high honour of being the first Fellow elected by the council of the Royal Society after they were incorporated by charter; and almost immediately after he was appointed first professor of a mathematical lectureship founded by Dr. Lucas, at Cambridge. This office he held for six years, and then resigned it to Sir Isaac Newton, having resolved to dedicate the rest of his life to divinity. Several small preferments he obtained in the church, till having by his pre-eminence as a preacher been marked out as capable of filling the most dignified stations, he was, in 1670, created Doctor in Divinity, preparatory to his being appointed Master of Trinity College, and chaplain to the king. Charles had conceived a strong partiality for him, and on bestowing these honourable preferments upon him, said 'that he had given them to the best man in England.' A further honour awaited him, in being elected, in 1675, to the Vice-Chancellorship of the university. But he was not destined to enjoy these honours long, for on 4th May, 1677, he was seized with fever, which in a few days terminated his brief, though brilliant career.—His works in mathematics are still held in great esteem. His sermons, with the exception of two, were posthumous, though he had prepared them for the press. They are remarkable for abundance of matter, treasures of erudition, for splendour of description, and a spirit of glowing piety. Charles II. used to call him 'an unfair preacher, because he exhausted every subject, and left nothing for others to say after him.' [R.J.]

BARRY, MARIE JEANNE DE VAUBERNIER, Countess Du, celebrated for her beauty and infamous licentiousness at the court of Louis XV., commenced her career in a millinery establishment, through which she entered upon the life of a courtesan, and was taken under the protection of the Comte du Barry. Presented at court 1759, when the place of Madame Pompadour was va-

cant, she became the king's mistress, and acquired the most unbounded influence over him. The dismissal and exile of the prime minister Choiseul was decided upon under her influence, guided by the 'corrupt D'Aiguillon,' and the 'time-serving Maupeou,' who were the most implacable enemies of the parliament, which had now maintained a quarrel for nearly a quarter of a century with the court. France, at this period, as the most vigorous and deep-sighted writer of the present age has described it, 'with a harlot's foot on her neck,' was preparing for the fearful struggle of the revolution, in which Du Barry, with so many others who were either the glory or the shame of their country, were doomed to perish. At the death of the king, in 1774, she was ordered by Louis XVI. into the convent of Pont-aux-Dames, near Meaux, but after some time permitted to reside in the chateau built for her by the old king. Here she lived some years in a creditable retirement, but coming to England to procure money for the use of the royal family by the sale of her diamonds, she fell under the displeasure of the revolutionary tribunal, and was condemned to the guillotine at the age of forty-nine. It is the common remark of historians, that France was indebted for much of its demoralization to this prostitute; rather, it might be said, she had the address to avail herself of the incredible corruption that prevailed at the very heart of society. She suffered at the close of the year 1793, uttering the most pitiable cries for mercy on her way to the scaffold. [E.R.]

Hunter, on board a ship in which the celebrated

Flinders was midshipman. Soon after reaching

Port Jackson, he and Flinders fitted out, at their

own expense, a small boat, eight feet long, which

they called 'Tom Thumb;' and in this, with one

boy for their companion, they made two surveying

voyages in 1795 and 1796, along the coast south-

wards. Their report on the country led to the

founding of new settlements. Sent out by the

government in 1797, in a whale boat, with a crew

of six men, and provisions for six weeks, Bass

contrived to make these last eleven weeks, and

performed a voyage of 600 miles. He traced a

portion of the southern shores of the continent, and

found that Van Diemen's Land, instead of being

continuous with it, as Cook and others had

asserted, was separated by a wide strait. The

question was not, however, regarded as quite

settled; and in 1798, on Flinders' return from

Norfolk island, Bass and he were sent out in a

vessel of 25 tons, with instructions to sail

round Van Diemen's Land, and examine the

capabilities of the coasts. Their successful

voyage and favourable report soon led to

further colonization. The strait received the

name of its discoverer. No danger could

check the ardour and daring of Bass. In 1796,

he attempted to penetrate through the

extraordinary rocky barrier which divides the

maritime belt on the east from the interior

plains, and during fifteen days

encountered the greatest perils, ascending

precipices by means of iron hooks fastened to

his arms, and descending by ropes into the

most frightful abysses. Like many previous

attempts, this proved unsuccessful, and it

was not till 1813 that a practicable

pass was found, due west of Sydney. [J.B.]

BAXTER, AND., a Scotch philos., 1686-1750.

BAXTER, RICHARD, a divine of great note among the English nonconformists, was born 12th November, 1615, at Rowton, Shropshire. His father's conversation and example were the means of bringing him under early impressions of religion, and although he for a time contracted evil habits, such as lying, stealing fruit, &c., his juvenile piety was never wholly extinguished. Unfortunately, his education was committed to teachers whose incompetency, or unfaithfulness were such, that he cannot be said to have enjoyed the advantages of regular instruction; and yet, by dint first of his father's counsels, and afterwards of his own genius and industry, he made attainments in knowledge superior to those of most of his contemporaries. His parents, who wished to procure him a place at court, engaged him to the master of the revels; but the bustle and pageantry of the daily scenes in which that situation brought him to mingle were totally uncongenial to a mind like his, fond of contemplation and retirement. With redoubled

zeal he returned after a month's experiment to his studies, and resolving to devote his attention to divinity, prepared himself for the work in connection with the Church of England. Having at the age of twenty-three received ordination, he officiated, first, as assistant at Bridgenorth, where his reputation as a preacher procured him an earnest invitation to become pastor of the church and parish of Kidderminster. In that town his ministry commenced in 1640, and was distinguished by a zeal and success rarely equalled. The unsettled state of the times drove him from that post of usefulness, and obliged him to seek an asylum in various parts of England. Though he espoused the cause of the parliament during the prevalence of the civil war, and became chaplain of a regiment, he was of decidedly moderate opinions, disapproved of revolutionary principles, especially of the violent measures adopted towards the late king, and did not disguise his disagreement, in many respects, with the conduct of both parties, in conducting the affairs both of the church and the state. His integrity and honest independence procured him general respect, notwithstanding which, however, he was subjected to much harassing annoyance. Mr. Baxter, at the earnest solicitation of the people, returned to Kidderminster, and discharged the ministerial functions in that place with all his wonted assiduity for a period of fourteen years. Having begun to entertain conscientious scruples about the *et cetera* oath, he relinquished the Church of England, and repaired to London, where, arriving immediately before the deposition of Richard Cromwell, he preached to the parliament the day preceding their vote for the restoration of the king. Having obtained a license, he preached frequently in the metropolis, till, in 1676, a meeting-house was built for him; but after preaching there once, he was dispossessed, seized by a warrant from the Lord Chief Justice Jefferies, tried and condemned for some passages in his Paraphrase on the New Testament. Through powerful influence exerted in his behalf with king James II., he was pardoned, and on regaining his liberty he resumed his ministerial functions, preaching to large and attached congregations in various parts of London. Mr. Baxter was a most voluminous author, one hundred and forty-five distinct works having proceeded from his indefatigable pen. The chief of these are his own 'Life and Times,' his 'Dying Thoughts,' his 'Saints' Everlasting Rest,' and his 'Call to the Unconverted,' of which 20,000 copies were sold in this country in a single year, besides translations of it into all the languages of Europe. His whole soul was absorbed by zeal for the glory of God, and the salvation of men, and in the discharge of his duty, he was fearless as much in reproving Cromwell and remonstrating with the profligate Charles, as in addressing a congregation of plain and ordinary people. BAYLE, G. L., a French med. au., 1774-1816

BAYLE, MOSES, a member of the Fr. convention and Com. of Safety, proscribed 1795, d. 1815.

BAYLE, PETER, born at Carlat, in the county of Foix, in 1647: the son of a Calvinist minister;—one of the most learned and laborious men of any age;—witness that grand monument he has left, the 'Dictionnaire Historique et Critique.' His own account of the cause of his extraordinary productive power is this,—meriting well a prominent place among the *memoranda* of the ambitious student,—'Amusements, pleasure-parties, games, collations, trips to the country, visiting, and other recreations, necessary—according to what they say—to many literary men, have no place in my manner of life; I lose no time in them, neither do I spend any on domestic cares, or in interfering with anything, soliciting anything, or meddling at all with business. In this way, a writer may accomplish much.'—The events of Bayle's life are eminently characteristic of his habit of mind: at one time a Calvinist; at the next a catholic; then Calvinist again; finally of no tangible creed or even profession or care about faith of any sort:—if his singular logical acuteness enabled him to cut in pieces the arguments then passing current for reasons, the defective force of his moral and intellectual instincts seemed to render him quite as happy and comfortable without a belief as with one. His writings, accordingly, are essentially *critical* and *sceptical*: he delights in showing how those important questions which philosophy would fain resolve are engirt by innumerable difficulties. Take as a specimen his treatment of the position '*There is a God.*' The usual proofs—apparently the soundest—on which one rests this position, that one, for instance, which would infer the *existence* of a perfect Being, from the *existence* in the human mind of a corresponding *idea*—are open to manifold objections. Touching the Divine *essence*, our ignorance seems insurmountable. Though all men might be said to agree as to the *being* of a God, where is their agreement regarding his *nature*; who can reconcile his immutability with his liberty, his immateriality and his immensity? His unity is not demonstrated. His prescience cannot easily be accommodated to the free-will of man; nor his goodness with the physical and moral evil prevailing in the world, or with the eternal punishment of the wicked. His decrees are impenetrable; his judgments incomprehensible. We can reach no higher than *negative* conceptions regarding his divine perfections. . . . Thus Bayle *doubts* rather than *reasons*:—nay, he concludes, in the true spirit of the Pyrrhonist, that Reason is not a safe guide. Never was *style* better adapted to such a thesis; clear, polished, keen, and passionless. No good library should want the Dictionary; and there are few Inquirers who may not derive benefit from its singular pages. Besides this *Opus Majus*, he wrote several miscellaneous treatises, collected in his '*Œuvres Diverses*,' four vols. 8vo. He died 'pen in hand' at the age of fifty-nine, in December, 1706.

BEATRICE, a martyr and saint, 3d century.

BEATTIE, JAMES, the well-known Scotch poet and moralist, was the son of a small farmer and shopkeeper, and was born at Laurencekirk in Kincardineshire, 5th December, 1735. After pursuing his studies with the most brilliant success at Marischal College, Aberdeen, he was appointed usher to the Grammar School of that city 1758, where he enjoyed the society of many distinguished men, especially of Reid, the metaphysician, from whom he acquired the principles afterwards illustrated in his '*Essay on Truth.*' In 1761, being then in his twenty-sixth year, Beattie made his *début* in the literary world as translator of the *Eclogues* of Virgil, and author of several small poems which had appeared anonymously at various times in the '*Scots Magazine.*' In 1765 he published '*The Judgment of Paris,*' and in 1766 a selection of his poems, with the addition of some which had not hitherto appeared. Between this period and 1770 he was preparing his famous essay, which he designed to counteract the baneful effects of materialism, by demonstrating the immutability of moral sentiment, which involves, in fact, the principle of a *priori* instruction and revelation. His personal history during this period acquires some interest from his marriage with Miss Dun, which took place in June 1767, and the friendship of the poet Gray, soon to be terminated by the death of the latter. The '*Essay on Truth*' at once established the fame of its author, who received the flattering recognition of a degree as doctor of philosophy from the university of Oxford, and the offer of the professorship of moral philosophy in the university of Edinburgh, which, for personal reasons, he declined to accept, as he did a handsome living in the Church of England proffered by Dr. Porteus. It was in the flush of his success that Beattie resumed his poetical studies, and gratified the English public with his '*Minstrel,*' a poem, written in the style and stanza of Spenser, and embodying, in the character of Edwin, a transcript of his own ideas and pursuits in his younger days. The first book of this celebrated poem appeared in 1771, the second in 1774, and a new edition of the whole in 1777, and it brought the author so prominently before the public that his merits were acknowledged in 1773 by an annual pension of £200 from the crown, graced, a little subsequently, by a private interview with the king and queen. In 1776 his essays '*On Poetry and Music,*' '*On Laughter and Ludicrous Composition,*' and '*On the Utility of Classical Learning,*' appeared, forming one volume with a new edition of his '*Essay on Truth.*' In 1790 and 1793 respectively, the two volumes of

his 'Elements of Moral Science' were first published, and as a further proof of his industry, there is scarcely an interval between the publication of the 'Minstrel' and his retirement in 1796, in which literature was not more or less enriched by his pen. It is sad to record that the insanity of his wife some years past, and the death of his sons, the younger of whom was suddenly snatched from him at the period just mentioned, affected at last his well-regulated mind. Though he recovered this shock, it was only to pass the remainder of his days in his now solitary home, where he died of paralysis, 18th August, 1803. Beattie has been described by one who knew him as a man of middle size, robust in appearance, somewhat corpulent, and slouching in his gait. 'His features were very regular; his complexion somewhat dark. His eyes were black and brilliant, full of tender and melancholy expression, and in the course of conversation with his friends, became extremely animated.' His eldest son, JAMES HAY BEATTIE, 1768-1790, gave proof of his philosophical and poetical talents in some fragments which were edited by his father, 1794. [E.R.]

BECKETT, THOMAS A., the illustrious, high-spirited, and ill-fated churchman canonized 1173 by Alexander III., was the son of a London citizen, one time a crusader, and was born in London on the festival of St. Thomas, 1117. He received a collegiate education at Oxford, completed by the study of the civil and canon law at Bologna, under the patronage of Theobald, archbishop of Canterbury, and was early carried to preferment

by his undoubted abilities, aided by a handsome person and refined manners; but still more by the jealousy which divided the civil and ecclesiastical powers at that time. On his return from Italy Beckett was appointed archdeacon of Canterbury by his patron, and soon after the accession of Henry II. in 1154, was raised to the dignity of high chancellor; doubtless by the influence of the prelate favouring his own ambition. At this time, it should be remarked, the power of the popes had risen to an arrogant height, and the dispute about investitures, the subjection of the clergy to lay jurisdiction in criminal matters, and various alleged abuses on either side, were subjects of continual and bitter strife between the church and the crowned heads of Europe. It is not likely that Beckett was ever undecided in his own views on any of these subjects, or on the part he was destined to play in the politics of the period; but it is easy to imagine that each party would see the means of advancing its own pretensions in the splendid abilities, the acknowledged purity of life, and the courtly manners of the young churchman. On the death of Theobald, in 1162, the king and the chief prelates were equally urgent for his elevation to the see of Canterbury; but once consecrated, it devolved upon him whether he would serve the church or the state, and he declared for the former without hesitation. The king and his late minister were equally matched for their inflexibility, quickness of resolution, undaunted courage, and statesmanlike abilities; and both were influenced, further than their own consciousness extended, by the spirit of the age. Three years of strife led to the council of Clarendon, convoked by Henry in 1164, when Beckett yielded to the entreaties or menaces of the barons, and signed the famous 'Constitutions,' by which the differences between the church and state were regulated. These articles not only rendered the state supreme in all that concerned the general government of the nation, but virtually separated the Church of England from Rome. The pope, therefore, refused to ratify them, and Beckett, seeing his opportunity, and really repenting of the compliance that had been wrung from him, refused to perform his office in the church, and endeavoured to leave the kingdom, in which, at last, he succeeded, only to draw down the vengeance of Henry upon his connections. The progress of the quarrel belongs rather to the history of the times than a single life. Beckett remained in exile six years, and matters being in some measure accommodated, returned to England in 1170, shortly after the coronation of the king's son, which had been designed by Henry as a means of securing the succession. Beckett's refusal to remove the censures with which the agents in this transaction had been visited, his haughty contempt of the crown, and the sentences of excommunication which he continued to fulminate from the altar of Canterbury cathedral, provoked anew the indignation of the king. It is idle to judge the actions of men in those iron times by the formulas of the present day. The question stripped of all disguise was simply this—whether Thomas à Beckett or Henry Plantagenet was henceforth to be king in England. The Norman lords resolved the matter in their own rude way, when at length four of

them leaving the king's presence in anger, after hearing of some fresh indignity, determined on bringing the controversy to a bloody close. The last scene of this tragedy is well known in all its details. It is sufficient to say, that Beckett was murdered during the celebration of the Vesper service in Canterbury Cathedral, on the 29th of December, 1170. [E.R.]

BECKETT, W., a cel. surgeon, b. at Abingdon, in Berkshire, 1684, d. 1738. Mr. Beckett wrote an 'Inquiry' into touching for the king's evil, and an Essay on curing diseases by charms and amulets.

BECKFORD, WILLIAM, was born in 1760. Ten years afterwards, by the death of his father, whose mayoralty of London was noted in the history of the times, he succeeded to a princely fortune. He was precocious, both in his love of literature and art, in his vigour of thought and expression, and in his retired eccentricity of disposition. After having lived much in France, and visited Italy and other continental countries, he married, in 1783, a daughter of the earl of Aboyne, who died young, leaving two daughters, one of whom became duchess of Hamilton. In 1784 he published in French his Eastern romance of 'Vathek,' which has been admired so warmly by the literary men of our time. Though he sat in more parliaments than one, politics occupied very little of his attention: he soon retired to the continent; and his fondness for architectural construction and embellishment showed itself first in a house he built at Cintra, in Portugal. In the commencement of the present century he began to build on his Wiltshire

[Fonthill Aubey.]

estate his magnificent mansion of Fonthill Abbey, which became all the more famous for the difficulty of satisfying curiosity in regard to it. The cost exceeded a quarter of a million. The pile had not long been completed and fitted up, when, in 1822, it was abandoned and the estate sold. Mr. Beckford spent his latest years chiefly at Bath, indulging his refined taste and his turn for secluded study. In 1834 he published 'Italy, with Sketches of Spain and Portugal,' containing recollections of his early travels, and abounding alike in eloquence and satire; and afterwards there appeared a similar volume, commemorating two Portuguese monasteries. He died in 1844, in the eighty-fourth year of his age. [W.S.]

BECKINGHAM, CHAS., a dram. wr., d. 1780.

BECKMANN, J. A., an economist, 1759-1811.
BECLARD, P. A., a Fr. anatomist, 1785-1825.
BEDDOES, THOMAS, a distinguished physician and chemist, cotemporary with Priestley, and in intimate friendship with Dr. Darwin. He is the author of numerous works, and is characterized by Sir Humphrey Davy, as 'a truly remarkable man, but more admirably fitted to promote inquiry than to conduct it:' 1760-1808.

BEDE, usually named the Venerable Bede, was born about 672, at Yarrow, near the mouth of the Tyne, in Northumberland. At the age of seven he was sent to the neighbouring monastery of St. Peter to be educated, and in a short time he transferred himself to that of St. Paul, which was also in the vicinity. In his nineteenth year he was ordained deacon, and eleven years afterwards he entered into priest's orders. His subsequent life, which was spent principally in the two religious houses referred to, was one of monastic punctuality and discipline, and of constant literary labour. Pope Sergius even could not induce the English recluse to visit Rome. His commentaries on the larger portion of the Old and New Testament are to a great extent compilations from his Greek and Latin predecessors. His well-known 'Ecclesiastical History of the English Nation,' is replete with proofs of its author's industry, honesty, and credulity, and still maintains its place as a high authority. Bede died about the year 735, occupying his last hours with earnest devotional exercises, and affectionate counsels to his younger brethren. His learning, which was great, was equalled by his sanctity. His numerous works have been often printed: the best and last edition in 12 volumes, octavo; London, 1843-44. King Alfred translated into Saxon Bede's 'Historia Ecclesiastica;' a rare honour for a book of church history. [J.E.]

BEECHEY, SIR W., R.A., a distinguished artist, best known for his portraits, 1759-1839.

BEETHOVEN, LUDWIG VAN, was born at Bonn, on the 17th of December, 1770. His father, Johann Van Beethoven, who was a tenor singer in the electoral chapel of Cologne, died in 1792. His grandfather, who died in 1773, was music director and bass singer at Bonn, and performed operas of his own composition during the life of the elector Clemens Augustus. The musical education of Beethoven began under his father when he was only five years old. His next tutor was M. Pfeiffer, for whom the great composer always retained a warm regard, and to whom he felt himself more indebted than all his other teachers. Beethoven acquired his knowledge of the organ from M. Von Der Eden, after whose death the young musician studied under M. Niefe,

who made him acquainted with the works of Sebastian Bach. In 1787 Beethoven met Mozart, who, when he heard the youth extemporize upon a theme given him, predicted his future success. In the year 1792 he was sent, by the elector of Cologne, to Vienna, that he might receive instruc-

[birth-place of Beethoven.]

tions in the theory of music from Joseph Haydn. He soon made the acquaintance of many of the nobility, of the artists, and literati in Vienna. Beethoven was the pupil of Haydn until the latter went to London, when he then took lessons in composition and harmony from Albrechtsberger. At this period of his life, Beethoven was more admired as a performer than as a composer; and it was thought, by the best German critics, that his power principally consisted in extemporary performance, and in the art of varying any given theme without premeditation. About this time he finally took up his residence at Vienna, and composed his first quartettes. In 1800, Beethoven was engaged in the composition of his oratorio—'Christ on the Mount of Olives,' which was first performed on the 5th of April, 1803. In 1804 he finished his 'Sinfonia Eroica,' and in 1805 he wrote his opera of 'Leonora,' known in England as 'Fidelio,' about which time he was first attacked with that deafness which, with other matters, made him distrustful and taciturn, and became the master-malady of his life. It began gradually, but was soon beyond the power of remedy, until at last he could only communicate with the outer world by writing. A decided enemy to flattery, and disdaining to court the favour of any one, Beethoven lived in Vienna depending solely upon the means which his compositions might produce, and was frequently reduced to straits little compatible with the greatness of his genius. The taste of the court had changed, and Italian music had almost banished the grander music of the German masters. In these circumstances he, in 1809, resolved to accept the office of chapel-master at the court of Jerome Buonaparte, then king of Westphalia, with a salary of 600 ducats; and it was only after the archduke Rudolph of Austria and the princess Lobkowitz and Kinsky settled upon him

an annuity of 4,000 florins, that he changed his mind. About this time also he resolved to accept an invitation from the Philharmonic Society to come to England, but his almost total deafness prevented him. In 1810 Beethoven brought out his first mass. In the same year he made the acquaintance of Bettino Brentano of Frankfurt, whose correspondence with Goethe has made the reading world acquainted with the private manners of the great composer, though her narrations are sometimes less full of character than of caricature. Through Bettino, Beethoven was introduced to Goethe in the year 1812, a friendship which reflected quite as much honour upon the rich and courtly poet and minister, as it did upon the poor, but independent and high-souled musician. On the 8th, and again on the 12th of December, in the year 1813, the first performances of 'The Battle of Vittoria,' and his symphony in A major, took place in the hall of the university, for the benefit of the Austrian and Bavarian soldiers disabled in the battle of Hanau. In 1815 Beethoven was exclusively employed in writing harmonies to Scotch songs for George Thompson of Edinburgh. From this period till the end of his life, Beethoven was harassed from various causes, chiefly of a domestic nature, and which ought never to have fallen upon him. These, together with his loss of hearing, begat a habit of gloomy thought, and a violent desire for solitude, till, by slow degrees, his frame, which was naturally robust and healthy, yielded to maladies which were induced by the constant and long-continued mental irritation to which he had been subjected. Forgotten by the Viennese, hardly appreciated by the rest of the world, Beethoven was seized with his last sickness; and the unnatural thoughtlessness and greed of his relatives continued till the period of his death, which took place on the 26th day of March, 1827. Beethoven died unmarried. His portraits, of which there are several, are all like him. He did not receive much education in his early youth, but when he became a man he read a great deal, and was well acquainted with the literature of Germany, and particularly admired the writings of Goethe and Schiller. With Shakspeare's works he was well acquainted, and admired them with the relish of a true artist. He was usually reserved, but when he entered into conversation he became animated, and original in the turn of his thoughts and expression. Beethoven left upwards of 120 works in all styles. His melodies are beautiful and new; and his instrumental music bears the unmistakable evidences of the grandeur and sublimity of his unrivalled genius. In 1845 a grand statue of Beethoven was erected in his native town amid great rejoicings, and in presence of the queen of England. [J.M.]

BEHRING, VIRUS, by birth a Dane, after having performed several voyages to the E. and W. Indies, entered the service of Russia while still

young. Having risen by the usual steps in the service, he became captain-commander in 1722, and was sent by the empress Catharine in charge of an expedition (planned by Peter the Great before his death), whose object was to determine whether Asia and America were united. Crossing Siberia, he sailed from the river of Kamtschatka in July, 1728; and reached lat. 67° 18' N., having passed through the strait since called after him, without knowing it. Discovering that the land trended greatly westward, he concluded that the continents were not united, and returned; without, however, seeing America. In another voyage, in 1741, he touched upon the American coast, in lat. 58° 28' N.; and gave name to Mount St. Elias. In returning, his ship was cast upon an island, since named after him, an outlier of the Aleutian group, and here himself and many of his crew perished. On his discoveries is founded the claim of Russia to that part of America lying west of the meridian of Mount St. Elias, 141° W. [J.B.]

BELISARIUS. 'One of those heroic names which are familiar to every age, and to every nation.' Thus does Gibbon justly characterize the emperor Justinian's victorious general. Belisarius first distinguished himself in the wars between the Byzantine empire and the kings of Persia. In 533, he was placed by Justinian at the head of the army by which that emperor sought to recover the old Roman province of North Africa from the Vandals, who had been in possession of it for seventy years. Belisarius was completely successful in his enterprise, and led the last Vandal king, Gelimer, as a captive to Constantinople. He was then sent on a similar expedition to conquer Italy from the Goths, who held dominion there. He thoroughly effected this purpose, capturing Rome, Ravenna, and other cities, inflicting severe defeats on the Goths in the field, and signaling his own courage and prowess as a soldier, as well as his skill as a commander. The Goths offered to make him their king, but his loyalty was proof against all temptation, and when recalled by Justinian, he promptly returned in submission to the will of a capricious and thankless master. After his departure from Italy, the Goths recovered the greater part of that country, and Belisarius, who in the interval had been defending the south-eastern frontiers of the

empire against the Persians, was sent a second time to Italy in 540. Being ill supplied with money and troops, he could effect but little against the numerous and well-appointed armies of the Goths, and Justinian angrily deprived him of the command with every mark of disgrace. The old general was once more summoned into activity and glory before his death, and saved Constantinople in 559 from a host of Bulgarians, who had suddenly advanced against it. When this signal service was effected, Belisarius was again dismissed with ignominy by his ungrateful sovereign, and ended his days in poverty and neglect; though the story of his having begged his bread in blindness and utter destitution is a mere fiction of later ages. Belisarius died in 561, a few months before the death of the emperor whom he had served so well, and by whom he had been so ill requited. [E.S.C.]

BELL, BEAUPRE, an Eng. antiquarian, 18th c.

BELL, BENJ., a writer on surgery, 1749-1806.

BELL, SIR CHARLES, an eminent physiologist, born at Edinburgh, 1774, died at Edinburgh, 1842. The subject of our memoir was the son of a clergyman of the Scottish Episcopal communion, in Edinburgh, who had other two sons, likewise distinguished—JOHN, as a surgeon, and GEO. JOSEPH, as a lawyer, being professor of law in the university of Edinburgh. Sir Charles Bell early settled in London as a lecturer and surgeon, and in the first capacity proved highly successful, but his scientific tendencies could ill brook the commercial asperities often attendant on surgical practice, and he appears never to have attained the position in his profession, lucratively speaking, which his great talents and acquirements deserved. He was lecturer at the Windmill-Street School, afterwards at University College, and the Middlesex Hospital, and latterly in the university of Edinburgh. The main labour of his life consisted in perfecting his great discovery respecting the nervous system, that mysterious portion of the animal frame. This discovery, second perhaps only to that of the circulation of the blood by Harvey, required an extensive series of experiments upon living animals, which long deterred him from carrying them into execution. But ultimately, by discovering humane methods of procedure, his exertions were crowned with success, and demonstrated that the nerves given off by the spinal cord, the great nerve deposited in the backbone, are destined for one of two purposes; those which leave the spinal cord in front bestow the power of muscular motion, while the posterior roots supply sensibility. When the anterior roots of the nerves of the leg are cut, in experiment, the animal loses all power over the leg, although the limb still continues sensible. But if, on the other hand, the posterior roots are cut, the power of motion continues, although the sensibility is destroyed. His subsequent researches showed that every muscle in the body has two nerves appropriated to it, one for sensation, and the other for motion; the first to carry the influence of the will resident in the brain towards the muscle, and the second to connect the muscle with the brain. It may be truly said that such men as Watt and Bell require no sepulchral monuments, since locomotives, railways, and steam-

boats contribute an ever augmenting immortal tribute to the one, and every student in medical science is a hereditary guardian of the genius of the other. [R.D.T.]

BELL, HENRY, an ingenious engineer, the first in Britain who successfully applied the steam engine to propelling vessels, though Millar's experiments were long prior, and Fulton had launched his first steam-boat on the Hudson four or five years previously to Bell's successful application of steam to the purposes of navigation. In 1811 Bell launched his boat, called the Comet, in reference to the appearance of a large comet that year. He constructed the steam engine himself, and in January, 1812, the first trial of the Comet took place on the Clyde. After various experiments the Comet was at length propelled on the Clyde by an engine of three horse power, which was subsequently increased to six. This engine is still in the museum of Glasgow College. Thus to Henry Bell is due the honour of having first done in his own country, what others who had attempted it—the great Watt himself—had failed in doing, notwithstanding superior advantages of capital. Bell's perseverance and skill were not rewarded with the outward test of success. Had it not been for the liberality of the magistrates of Glasgow, who settled upon him a small annuity, he must have spent the latter years of his life in poverty. He was born in Linlithgowshire 1767, and died at Helensburgh on the Clyde in 1830. A monumental stone to his memory is erected on a rock in the Clyde near Bowling. [L.D.B.G.]

BELLARMIN, CARDINAL ROBERT, was born at Monte Pulciano in Tuscany, in 1542. Entering the order of the Jesuits in 1560, he was ordained priest in 1569. He filled the chair of theology at Louvain for seven years from that period. Going to Rome in 1576, he distinguished himself by shrewd, bold, and popular polemical prelections, and was, as the great champion of the church, elevated to the rank of cardinal in 1599. His latter days were spent in Rome, where he died in 1621. His 'Opus Controversiarum' fills three folio volumes. He has also left a Commentary on the Psalms, several smaller pieces, some of them devotional, and a treatise 'De Potestate Summi Pontificis.' Bellarmine was a man of no mean powers and mental resources; and unequalled as a skilled controversialist among the numerous defenders of the Church of Rome. [J.E.]

BELLINI, GENTILE, an Italian painter, of the same school as his brother Giovanni, 1421-1501.

BELLINI, GIOVANNI, a celebrated Italian painter, was born at Venice about 1426. He belongs to the school of painters known as the *quattrocento*, in Italy, literally the fifteenth century masters, but distinguished as much by their style as their period. This style, lately here designated, very inappropriately, the *preraphaelite*, is well illustrated in Bellini's portrait of the Doge Loredano, in the National Gallery—hard and dry, but exact in detail, and high and positive in colouring.—Giovanni Bellini was one of the first of the Venetian artists to adopt the new method of oil painting in lieu of the old process with *tempera* vehicles, that is, with saps and gums. His best works are in oil; they consist chiefly of madonnas and portraits. He died at the advanced age of ninety, November 29, 1516. Titian and Giorgione were two of Bellini's many eminent scholars. (Vasari, *Lives of the Painters*, &c.; Ridolfi, *Maraviglie dell' Arte*, &c.; Cadorin, *Tiziano Vecellio*.) [R.N.W.]

BELLINI, L., a celeb. anatomist, 1643-1702.

BELLINI, VINCENZO, was born at Catania in Sicily, in the year 1806. Bellini received his musical education from Zingarelli, in the Conservatorio of Naples, and produced, at the theatre San Carlo of the same city, his opera 'Bianco e Ferdinando,' before he was twenty years old. In 1827 he composed 'Il Pirata' for the Scala at Milan, and soon after 'La Straniera' for the same establishment. These operas were succeeded by 'La Sonnambula' (which has perhaps been performed a greater number of times in Great Britain than any other foreign opera,) at Naples, 'I Capuletti ed i Montecchi,' at Venice, 'Norma' at Milan, 'I Puritani,' for the Theatre Italien at Paris, &c. The life of Bellini was unmarked by incidents. He was pure in morals, and his manners, like his compositions, were gentle, mellifluous, and elegant. Subject to pulmonic disease, he was unequal to violent effort of any kind, so he never attempted the lofty or sublime in music. He died of consumption in 1835. A writer (L. W. Tinelli) in the 'Musical World' says of Bellini—'The enthusiasm excited by this astonishing production (Norma) is beyond all description. In a few months the "Norma" became the favourite performance of all the Italian and foreign stages, and crossed the immense distance of the ocean to delight the ears of the transatlantic inhabitants. Soon after this new triumph he was called to Paris, where he wrote, in his greatest style, "I Puritani." It was the last song of the swan! One morning in the month of October, 1835, the inhabitants of Paris hastened to the streets of that immense capital to contemplate the numerous and select crowd which was following a funeral procession. Some of the most celebrated men were amongst the crowd. Sadness and sorrow were in the countenance of every one. A plaintive and moving music added to the melancholy scene. Death had reaped one of the finest flowers of nature. The funeral concourse stopped at the cemetery of Pere la Chaise, where the coffin was deposited, and, one hour after, a modest

cross was raised on the ground, with the following inscription: "Pray for the peace of Vincent Bellini." Bellini was only twenty-nine years of age when he died. His disposition was good, though exceedingly passionate. His appearance was noble and expressive. His genius was vast as creation, and his soul innocent and gentle as the first sigh of love." This is the eulogium of a friend and admirer, let it live in the memory of all musicians. [J.M.]

BELZONI, GIOVANNI, celebrated for his discoveries in Egypt, was a native of Padua. His early studies, which had a view to the monastic life, were prosecuted at Rome, from which his family had originally come. The French invasion of 1798 caused a change in his plans; and in 1800 he left Italy, and visited several parts of Europe. He came to England in 1803, where he soon after married. He was tall and robust in person, of uncommon strength, and commanding mien; qualities which, united to great intelligence and sagacity, perseverance and a love of enterprise, gave him immense influence among the wild people with whom he so long associated. His remittances from home were scanty; and he seems to have turned to profitable account a knowledge of hydraulics which he had acquired at Rome. Often, however, he was obliged to obtain a livelihood by exhibiting feats of strength. Leaving England in 1812, he visited Spain, Portugal, and Malta, and in 1815 went to Egypt, where he was for a short time employed by Mehemet Ali in erecting hydraulic machinery at Cairo. Driven thence by the prejudice of the natives against his improved plans, he visited many parts of Egypt and Nubia, and the shores of the Red Sea, discovering buried cities, rock temples, &c., and displaying the greatest skill in the removal and shipment of such gigantic works as the bust of Memnon, and other remains now in the British Museum. The pecuniary means, besides a personal remuneration, were supplied chiefly by Mr. Salt, the English consul, but partly also by Burckhardt the traveller. In September, 1819, Belzoni left Egypt, and on his way to England visited his native town, where he was received with honour. His 'Narrative of Operations,' &c., was published at London in 1820, in a 4to vol. with atlas. In 1823, accompanied by his wife, he left England for Morocco, with the view of penetrating to Timbuctoo. He had neither commission nor assistance from government, or any society, and except £200 supplied by the Messrs. Briggs of Alexandria, depended

solely on his own resources. Failing to obtain permission from the emperor, he sailed to the Bight of Benin, and was forwarded on his journey by the king of that country. Not long after, however, he was seized with dysentery, and died at Gato, in Dec., 1823. Directions concerning his property, and his last regards to his wife, had been the day before sent by letter to his friend Mr. Hodgson, then on the coast with the brig Swinger. [J.B.]

BENTHAM, JEREMY, born in London in 1748, where he lived during most part of his long life of eighty-four years; one of the most remarkable thinkers and writers England has recently produced—equally estimable as a citizen and a man. Bentham's labours must be divided into two grand parts,—the first by far the least important, although the one through which he is popularly known. As a writer on the Science of Morals, properly so called, he has contributed little that will be permanent in philosophy. Great as a jurist and reformer, especially in our Criminal Laws, he naturally sought to weigh the value of actions by their external effects; and unhappily he transported this conception—correct in its relation to Public Law—into the domain of Scientific Morals, taking as the root of his system, that good and bad, just and unjust, must be synonymous with the *utility* or *inutility* of an action. Reserving discussion of this peculiar theory for the article *Epicurus*, we hasten here to the agreeable task of pointing out Bentham's rare, original, and incontestable merits. He may be said to have been the first thinker among us who gained clear ideas of the cumbrousness and iniquity of our artificial English Laws; and although questions may well be started as to the practicability of his sweeping codification, it cannot be doubted that from his mind most of the statesmen who have since effectively laboured to simplify these laws, drew their best inspirations. On many special doctrines or theories of Law, his speculations threw abundant and important light—for instance, the Doctrine of Punishments and the Theory of Evidence. Discerning the value of Education as a preventive means, he threw himself into that subject with great eagerness—producing his curious *Chrestomathy*. On kindred moral subjects, he also wrote much,—often perhaps not very considerably, always with fearlessness and power. His labours, in fact, attach to every great question of reform which later times have cast up; and there were few men of eminence in his time who did not court a friendship, ever open to the deserving. Mr. Bentham's most distinguished associates were probably *Sir Samuel Romilly* and *James Mill*.—His works were first published in a collected form in the French language, under the care of *M. Dumont*: an English edition has since appeared, edited according to the philosopher's own request, by Dr. Bowring. [J.P.N.]

BENTHAM, THOS., bp. of Lichfield, d. 1578.

BENTINCK, WILLIAM, the intimate friend of William III., created earl of Portland, died 1709.

BENTINCK, W. H. CAVENDISH, third duke of Portland, born 1738; lord-lieutenant of Ireland, 1782; chancellor of Oxford, 1792; home secretary, 1794-1801; first lord of the treasury, 1807; d. 1808.

BENTINCK, LORD GEORGE, a British parliamentary leader, was born on 27th February, 1802. He was the third son of the fourth duke of Portland, and thus descended from the distinguished Dutchman who enjoyed the friendship of William III. He was by his mother, a daughter of Major Scott of Balcomie, connected with Canning, who married her sister, and he made such early acquaintance with political business as he possessed, in the capacity of private secretary to his uncle-in-law. He entered the army and rose to the rank of major, but that profession in time of peace had not sufficient attraction for his stirring temperament, and he took with laborious ardour to field sports and the turf. Though a younger son, the fortunes of the family enabled him to indulge in horse racing without mercenary views, and yet it is generally said that he realized a large sum of money on the turf. His success and general high character in the sporting world arose from a high-handed integrity, which gave him the position of a bold, earnest, honest enthusiast, in occupations pursued by so many through momentary excitement, dissipation, or a base design to profit by the follies of others. In 1826 he entered parliament as member for Lynn Regis, and continued to represent that constituency till his death. He was a very steady attendant, almost always in his seat awake or asleep. But his attendance was not of a character to give him the knowledge of a statesman, since the benches of the House of Commons were his place of rest between unremitting labours in the hunting field and other congenial arenas. Before 1846 he was generally set down as a moderate Whig, but it is evident that his political partisanship rested more on personal alliances than constitutional views. When Sir Robert Peel dealt his final blow at the corn laws and commercial restrictions, the country gentlemen, who thought it was not the necessary progress of sound political economy, but the want of leadership and combination which threatened what they counted their ruin, looked to Lord George as a leader, on account of the energy and skill he had shown in his favourite pursuits. He accepted of the proposal, and became the leader of the opposition, transferring to the interior of St. Stephen's the methods which gave him success in his more congenial occupations out of doors. He made it his twofold occupation to hunt the enemy, and to manipulate statistics into startling momentary results, as in the calculations of the betting book. He knew to the last little or nothing about politics, but his chivalrous bearing and utter unconsciousness of defeat, gave him popularity even with his opponents. The energetic zeal with which he followed his new pursuits broke his constitution, and, seized with an attack of the heart, he dropped suddenly dead on the 28th September, 1848, and was found lying on the road where he had been walking. BERENGER, or BERENGARIUS, was born at Tours, about the beginning of the eleventh century. His earliest education was received under Fulbert at Chartres, a teacher of affectionate wisdom and piety. Berenger showed from the first a liberal spirit of inquiry. For some time he taught in his native city, and gained there the office of Scholasticus, that is, superintendent of the school attached to the cathedral or monastery of St. Martin. Afterwards he was archdeacon at Anger. The name of Berenger is associated principally with the famous mediæval controversy on the doctrine of transubstantiation. He had revived the doctrine of Scotus, that the bread and wine still remain symbols after the consecration, and are not changed in substance; but his doctrine was condemned by several councils, such as that of Rome in 1050. The strife raged for thirty years, and Berenger sometimes wavered, and even formally recanted in 1079, under the terrorism of his ecclesiastical superiors. But he soon retracted, and by Lanfranc and others, under Gregory VII., the controversy was prolonged till his death in 1088. The theological influence of Berenger was lost by his vacillation, but he was one of the revivers of metaphysical study and dialectics, and as has been remarked, 'he continued Scotus Erigena, and prepared the way for Abelard.' His book 'De Sacra Coena,' was published at Berlin in 1834; the manuscript of it having been found by Lessing in 1770 in the ducal library of Brunswick. [J.E.]

BERKELEY, GEORGE, earl of, author of 'Historical Applications,' and member of the privy council to Charles II., died 1698.

BERKELEY, GEORGE, bishop of Cloyne, born in Ireland in 1684; died at Oxford in 1753. The interest connected with this rather remarkable man is measured by that of his system of philosophy, which we shall shortly characterize. It is necessary to a right understanding of Berkeley's speculations that one recall the false conceptions certainly prevailing at his time regarding the mode or manner in which *we know*;—we allude to the Theory of the *Idea*. It was thought that the idea through which we know, and the thing that we know through it, are perfectly distinct. The *idea* of an object was fancied a sort of image of the object capable of being perceived by the mind: just as the mind, in seeing, discerns not the object but the image on the retina. Adopting this to the fullest extent in respect of all that knowledge which we call the knowledge of external things, Berkeley yet held that knowledge of the *mind* itself and of its operations, comes at *once* and without the interposition of any medium—through a simple act of internal perception: from which foundation, his strict logic led to the following singular superstructure. What are termed external objects, being seen not in themselves but through or by *ideas*, what right have we to imagine the existence of these objects at all? Supposing them real, they are confessedly not discernible by the human mind; why then assume their existence? True knowledge, on the other hand, comes to us *directly* respecting the *mind*: is not mind and its phenomena therefore—spiritual entities—the sole reality in the universe? Like Malebranche after him, the good Bishop of Cloyne reached this singular conclusion the more readily, because of the fervency of his religious principles. 'If the principles I entertain,' he alleged, 'come to be admitted among men, the consequences that I think will follow immediately are these—atheism and scepticism must utterly fall.' He assuredly had weighed with little care the consequences inseparable from the concession to logic of a supremacy over our primary intuitions. Scarcely was the ink dry with which he wrote, ere the remorseless dialectic of Hume attacked with equal vigour the existence of the spiritual world—reducing all possible knowledge to the bare fact—*I exist!* It certainly appears singular that even religious fervour could take so extravagant a turn in so acute a man: nevertheless, the moving principle of Berkeley's speculations was a spirit of revolt against the materialistic philosophy that

issued from Locke's 'Essay on the Human Understanding,'—*Alciphron* or the *Minute Philosopher* being mainly a protest against the paradox of Mandeville, that virtue is only an artificial product of policy and vanity.—Berkeley's knowledge was extensive; he was fond of physical science, and he struck out a sound theory of vision. His heart was a noble one, and his life pure. He was valued and admired among the best writers of the day, numbering among his friends Swift and Stella, the Duke of Grafton, Lord Peterborough, and Pope. There is now a good edition of his works in 3 vols. 8vo. [J.P.N.]

BERNOULLI. The family name of a cluster of famous mathematicians living at the period of the revival of science, when Newton evolved the law of the celestial motions, and he and Leib-

nitz invented and promulgated the higher calculus. All distinguished by eagerness in the pursuit of Analysis, and the two elder especially, by much vivacity of temper—they mingled earnestly in the keen commerce and conflict of scientific writers, which so enlivens the history of those times, and renders the details of personal history part and parcel of the history of the progress of knowledge. Our limits confine us within a simple enumeration of these distinguished men, and a bare statement of their main achievements.—1. JAMES BERNOULLI, probably the most original analyst of the group; born at Basle in 1654,—died in 1705. He had great powers of invention, and much taste for simplicity in method and composition. He greatly extended the theory of the quadrature of the parabola, and the geometry of curve lines, spirals, &c. His chief contributions, however, relate to the summation and doctrine of infinite series; and we owe him the first systematic work on the now very important theory of chances. His writings are collected in 3 vols. 4to.—2. JOHN BERNOULLI, brother of James; born in 1667, died in 1748; also a very great analyst. Besides his essays on the management of ships and the elliptical figure of the planets, John Bernoulli wrote on almost every branch of the existing mathematics; and he touched nothing he did not expand and improve. The great age he attained was worthily bestowed on him; he died full of honours. His collected writings fill four 4to volumes.—3. JOHN BERNOULLI, son of the preceding; professor of mathematics in St. Petersburg, where he died in 1726; born in 1695.—4. NICOLAS BERNOULLI, nephew of 1 and 2, born in 1687; died in 1759; professor of mathematics in Padua.—5. DANIEL BERNOULLI, son of Nicolas, a very eminent philosopher, rivaling the glory of the elder brothers of the family. He was born in 1700, and died in 1782. His two great works are the 'Exercitationes Mathematicæ' and his 'Hydrodynamica;' but besides writing occasional treatises and memoirs, he contested, and gained or divided with the greatest mathematicians in Europe, no fewer than ten prizes offered by the Academy of Sciences. No name of the time stands higher than that of Daniel Bernoulli.—6. JOHN BERNOULLI, brother of Daniel, professor of mathematics at Basle, born 1720, died 1770.—7. JAMES BERNOULLI, nephew of the two preceding, born in Basle 1759, died in 1789, too early for science. At this close of the family of the Bernouillis, its former glories seemed about to blaze out again. In the space of about five years, the younger James presented no less than eight memoirs to the Imperial Academy of Sciences, which have been printed in the 'Nova Acta;' and he was a correspondent of other academies besides. Everything he wrote displayed singular acuteness.—It is not often that the historian of Science has to record concerning such a family. [J.P.N.]

BERTHIER. ALEXANDER BERTHIER, prince of Neufchatel and Wagram, was born in Paris in 1753, of higher parentage than that of most of the military chiefs of the French revolution and empire. He saw some service in Rochambeau's auxiliary corps in the American war, and continued in the French army after the fall of the monarchy. It is chiefly as Napoleon's favourite chief of the staff that he acquired distinction. His talents for independent command were slender, but he possessed the power of rapidly comprehending Napoleon's wishes and tactics, and he showed an alacrity and a skill in carrying the imperial orders into effect, that made him most valuable, and procured him high promotion and favour. On the downfall of Napoleon, in 1814, Berthier, like other marshals, professed allegiance to the Bourbons, and he is said to have shown more readiness and zeal in so doing, than became one who had been, like Berthier, the favoured friend, as well as the highly rewarded servant of the ex-emperor. On Napoleon's return in 1815, Berthier quitted France with the Bourbon princes; but he suffered deeply in spirits and in conscience, and at last, after watching a body of Russian troops who were marching through Bamberg against France, Berthier committed suicide. [E.S.C.]

BERTHIER, J. B., an architect, &c., 1721-1804.

BERTHOLLET, F., a Fr. historian, d. 1755.

BERTHOLLET, CLAUDE LOUIS, born at Talloire, near Annecy, in Savoy, 9th December, 1848, died at Paris, 6th November, 1822, aged seventy-four, affords one of the most illustrious examples of a genius for the practical application of science among the *savants* of the last century. Educated for the profession of medicine, in an obscure corner of the country, he came to Paris destitute of friends and acquaintances; but having learned that M. Tronchin, a distinguished practitioner in the metropolis, was a native of Geneva, he made bold to call upon his countryman, and, fortunately for science, was kindly received and patronised by him; and through his means Berthollet was made physician to the duke of Orleans. It was through this nobleman that he was placed in the position of superintendent of the government dyeworks, where he acquired the information contained in his valuable work on this art, and which led him to apply to practice in bleaching, the important fact, discovered by Scheele, of the decolorizing properties of chlorine gas. It would be difficult to estimate, in its true light, either morally or pecuniarily, the

enormous benefits conferred on humanity by this application alone. James Watt introduced this application soon after from Paris to Glasgow. To the chemist Berthollet, too, is due the salvation of his country; for, when hemmed in by Austrian and Prussian troops, and the English navy, her commerce cut off, and the very instruments of self-defence denied her, Berthollet instituted native iron and saltpetre works, and supplied the cannon, swords, and gunpowder to withstand the ruthless invaders. Eminent for his love of art as well as of science, he was chosen by the Directory, in 1786, to proceed in company with his friend Monge to select such works as were best fitted to adorn the Louvre; and in 1798 he accompanied Buonaparte to Egypt on a similar errand. By the illustrious general he was courted as a friend, not only from his simple and unobtrusive manners, so becoming his profession, but also from his force and depth of character, which rendered him a valuable companion. How seldom does the man of science acquire credit for the benefits conferred on his fellows? In no instance is this affirmation more remarkably exemplified than in the discovery by Berthollet of the chlorate of potash, a salt which not only, as an indispensable ingredient in the lucifer match, administers to the convenience of every one, but enables many a poor shivering outcast to supply his daily wants. Berthollet, too, was the discoverer of detonating silver, the first of those compounds so valuable in their application to fire-arms—which are thus rendered independent of the seasons. He discovered, likewise, chlorocyanic, and first showed that the familiar volatile gas ammonia is a compound of 1 vol. of nitrogen and 3 vols. of hydrogen. Although the more modern views of chemical combinations have set aside his views on these subjects, it is impossible to read them without being struck with the ingenuity of his arguments, and the force of his reasoning powers. In one point he successfully combated the opinions of the celebrated Lavoisier, who believed that oxygen was the acidifying principle. Berthollet, on the other hand, showed that sulphuretted hydrogen and prussic acid are distinctly acid, and yet contain no oxygen. Subsequent observations have only strengthened the views of Berthollet. Berthollet was endowed with the greatest liberality and benevolence of disposition, and was destitute of that narrow and contracted selfishness so often complained of in these days of competition, which is too apt to mar the lustre of the scientific character. In his latter years he removed to the village of Arcueil, three miles from Paris, near his friend La Place, for whom he entertained a warm affection. Here he fitted up a laboratory, and formed the Society of Arcueil, composed of a number of young chemists and friends, whom he encouraged by his example and kindness. Their names will show how happily was his friendship bestowed—La Place, Biot, Gay Lussac, Thenard, Collet-Descotils, Decondolle, Humboldt, and his son A. B. Berthollet. The society published three volumes of valuable memoirs. To a chemist, we know of no more sacred place than the hamlet of Arcueil. But the last days of the good old man were dimmed by the suicide, by means of the fumes of charcoal, of his only son, in whom his affections were concentrated. From this sad calamity he never recovered; and, to

complete his misfortunes, his friend, the emperor having been replaced by the Bourbons, science was again, as in so many other instances, sacrificed at the shrine of politics, and the eminent chemist was reduced from a state of affluence to comparative poverty. Death, in 1822, stepped in to his release, and posterity alone can yield some requital by revering the memory of the good Berthollet. [R.D.T.]

BERZELIUS, JOHN JACOB, b. 1779, d. 1848, the son of a parish schoolmaster at Vafersunde, in the south of Sweden, as is said. The subject of our memoir possessed the opportunity of acquiring the elements of a good education in a country where reading and writing are understood to be within the grasp of the poorest peasant. He was educated for the medical profession at the university of Upsala, and obtained his first acquaintance with chemistry from Professor Afzelius, a nephew of Bergman, Ekeberg, and Ghan, to whom chemists are indebted for the establishment of the blowpipe as an indispensable instrument in chemical research. From the period of his first publication, his *Animal Chemistry*, in 1806, till his death, Berzelius's career was one of the most active and industrious of any chemist who ever existed. His mechanical powers of manipulation were of the highest order, and he set himself at an early period to make the most scrupulously accurate analyses. It was from this power of minute investigation that, in company with Hisinger, he was enabled to detect, at the outset of his career, the new earth oxide of cerium, and afterwards selenium and thorium. It was by his accurate investigations that he was enabled to follow up the foundation-stones of the atomic theory laid by Dalton, Thomson, and Wollaston, and assist in raising a valuable superstructure, and

to demonstrate, in 1815, that the mineral world, as had been enunciated by Smithson, is a naturally existing exemplification of the beautiful doctrine of definite proportions. It would be difficult to over-estimate the value of the contributions made to the science by this indefatigable chemist, whose body and mind seem to have been in incessant action for the best part of half a century, whether we view them in his valuable investigations of the constituents of nature, in the various editions of his *System of Chemistry*, which contained a complete digest of the knowledge possessed by chemists at the time they appeared, of chemical substances, or in the annual reports which he published, in continuation of those of Thomson, of the progress of his favourite science. The part which he took, too, in modifying the system of symbols, introduced into the science by Thomson, so as to suit all nations, is highly deserving of commendation, since without symbols it is difficult to understand how chemical constitution could be rendered intelligible in its present complicated condition. The ingenious generalizations which he sometimes made, although generally ultimately found to be untenable, were productive of vast benefit in encouraging and stimulating inquiry. Among these views may be noticed his ideas of the compound nature of chlorine; his theory of electro-chemistry, of isomerism, of catalytism, &c. It is much to be regretted that the free inquiry and liberty of deduction which he claimed for himself he did not always allow to others, and that the closing years of his busy life should have been occupied in a coarse warfare with his contemporaries and the younger spirits of the age, and in an attempt, which ever must prove fruitless, to bind to the chariot-wheels of a past time the new discoveries which uniformly refuse to be attached to old-fashioned inventions. Much of this asperity of literary manner may undoubtedly be attributed to isolation during his earlier years, from the softening influences of life, and to deteriorating habits, which it is understood were too unsparingly encouraged. Berzelius contributed, in a remarkable degree, in disseminating the study of the science over the continent of Europe, by the able pupils who were educated under his eye, and who did not fail to communicate in their turn to their successors the accurate lessons which they themselves had so bountifully received. To have communicated the elements of the science to such men as Gmelin, Arfwedson, Rose, Mitscherlich, and Wöhler, is no small piece of good fortune. No department of the science has escaped the masterly touch of Berzelius; even organic chemistry, which he was desirous of confining under obsolete rules, was indebted to him for many early elucidations, which paved the way for those who were to follow. In no portion of the science were his labours of more value than in that of analyses, the processes depending on an intimate acquaintance with the properties of the various kinds of matter, by which the chemist is enabled to tell, to the most minute fraction, how much of any element is present in a compound. Berzelius was for many years professor of chemistry in Stockholm. During the latter years of his life he retired to the country, and married, and was elevated to the rank of baron. But to the last he took a deep interest in his science, and even when paralysis had denied to him

the power of locomotion, he continued to dictate to his amanuensis his annual report, striving, as it were, to bid against nature, and to lengthen out the space of terrestrial mental existence. [R.D.T.]

BEZA, or THEODORE DE BEZE, was born of noble parents at Vezelai in 1519. His studies were begun at Orleans under Wolmar, a German to whom may be traced his pupil's attainments in Greek. Here he studied law, and having at the age of twenty obtained a diploma, he spent the next nine years in Paris; living in the midst of such enjoyments as an ample fortune can at all times secure in the gay capital of France. Here he published his 'Juvenilia,' a collection of poems, many of which are just in character and gallantry, what might have been anticipated in the circumstances. His own conscience, his secret marriage, and a severe illness, combined in solemnizing his mind, so that at length he fled to Geneva, and publicly avowed his attachment to the protestant reformation. In a very short time he became professor of Greek at Lausanne, and after ten years' labour there he returned to Geneva. From the period of his return to Geneva in 1555 to his death there, October 18, 1605, Beza was identified with the Swiss reformation. He was the first rector of the new academy established there, and he succeeded Calvin in the chair of theology in 1564. After the great Reformer's death, Beza occupied the first place of influence and responsibility, not only in the church of Geneva, but in the neighbouring cantons and in France. In 1577

he was moderator of the great protestant assembly at Rochelle, by which the French confession was emitted. Beza revisited France about 1560, and was introduced to, and favourably noticed by Catharine de Medici and the Cardinal Lorrain, and he occasionally preached in the suburbs of Paris. He was also on the battle-field with the great Condé in 1563. The Greek scholarship of Beza was consummate, and one of his early works at Lausanne was his famous translation of the New Testament into Latin, printed by Robert Stephens at Paris in 1557. In 1565 he published his first edition of the Greek New Testament, making use of a MS., containing the four Gospels and Acts, which usually goes by his name, and which in 1581 he gave to the university of Cambridge. This edition, which is almost the same as that of R. Stephens, was four times reprinted by him, and the last edition of 1598 was taken as the basis of the authorized English version of the New Testament. Beza wrote many other treatises, especially on the power of the magistrate in matters of religion. But it is as an editor, translator, and commentator in connection with the New Testament, that all subsequent scholars hold Beza in high esteem, not only for his own lofty acquirements, but also for the impulse which he gave by his example and his publications to biblical studies. BICKERSTETH, EDWARD, a highly popular writer of religious works, was born 19th March, 1786, at Kirby Lonsdale, in Westmoreland. After receiving the rudiments of learning at the grammar school of his native town, he obtained, at the age of fourteen, a situation in the General Post Office, London, and although that employment put an end for a time to his classical studies, it trained him to those business habits which qualified him pre-eminently for the peculiar work which Providence had in reserve for him. Disgusted with the monotonous routine of his duties in the post office, he turned his attention to the study of law, and obtained admission into the chambers of an eminent London attorney, to whom, after two years' and a-half service, he became principal clerk. At a later period he settled in Norwich as partner to Mr. Bignold, a young and flourishing attorney, and connected himself still more closely with that gentleman by marrying Miss Bignold, his sister, on 5th May, 1812. For many years previously, Mr. Bickersteth had been

under deep impressions of personal religion. Amid all the engrossing avocations of his legal business he attended to the one thing needful, never allowing a day to pass without devoting a portion of it to the regular study of the Scriptures, with private devotion, and adopting various other methods for promoting his personal improvement and his walk with God. The principles he regarded as so vital to the welfare of his own soul he longed to impart to others, and mourning over the multitudes in the town of his adoption who were growing up in ignorance and irreligion, he commenced a Sunday-school by collecting a few poor children for instruction in scriptural knowledge. This school, which gradually increased till it became a large and important institution, encouraged him to try other means of Christian usefulness, and accordingly he originated a benevolent visiting society, a church missionary society, a society for the conversion of the Jews, all of which, in spite of strong opposition from several quarters at first, continued to grow in numbers and influence. Having published his 'Help to the Study of the Scriptures,' which proved an eminently useful and acceptable work, he was earnestly pressed by several Christian friends to enter the ministry. The advice accorded with his own ardent aspirations, and at length a door having been opened by Providence, he was ordained deacon in the Church of England, and preached his first sermon in Norwich, 10th December, 1815. In the beginning of 1816, Mr. Bickersteth undertook a special mission for the purpose of inspecting the settlements of the London Missionary Society in Africa, and after having accomplished the important objects of his embassy, returned to the shores of Britain in the following August. For many years he acted as one of the secretaries of the Missionary Society, and in that capacity led a life of incessant activity, journeying in all parts of the country, and addressing public meetings in behalf of the institution. Resigning this laborious office, he became, in 1829, sole pastor of Wheler Chapel, London; and on 23d October, 1830, he undertook the charge of the rural parish of Watton, Herts. After a life of such indefatigable labour as he had led, this situation was a comparative sinecure. But by multiplying the services, both on Sabbath and week-days, 'he worked,' to use his own phrase, 'as busily as a bee.' In all questions affecting the interests of religion he took a prominent part, for he was looked up to as the head of the evangelical party in the Church of England, and in private he was unwearied in advancing the cause of Christian truth with his pen. The 'Christian Hearer,' the 'Christian Student,' a treatise on 'Baptism,' the 'Testimony of the Reformers,' and many other works, well known in the religious world, attest his piety and zeal. Mr. Bickersteth, in February, 1850, was seized with a paralytic stroke, which soon after carried him off, in the sixty-third year of his age. [R.J.]

BILLAUD-VARNES, JOHN NICHOLAS, was the son of an advocate, and like Fouché, was educated by the Jesuits, but compelled to leave the congregation of the oratory on account of his licentiousness. He remained in obscurity until the outbreak of the revolution, when the revolt and fearful sacrifice of life at Nanci in the month of August, 1790, gave him an opportunity of attacking the government, especially in a work of 3 vols. 8vo, entitled 'Despotisme des Ministres de France.' Between this period and the autumn of 1792 he published several political brochures, remarkable, it is understood, for their brutal vehemence rather than for any originality or show of argument; and it was only on the 10th of August in that year, when the death-struggle of the Swiss guard, followed by the sack of the Tuileries, and the imprisonment of the royal family took place, that he emerged from the obscurity of the Faubourgs as one of the hundred and forty-four who turned out the old municipals, and declared themselves the magistrates of the people. In the horrible massacres of September he was seen standing in his official scarf, short brown coat, and black wig, with one foot on a corpse and the other in a pool of blood, urging the murderers at the Abbaye to continue the work of slaughter, of which, from mere physical exhaustion they were growing weary. He was remarkable on all occasions for his repugnance to any regular form in the administration of the people's wild vengeance, and had a principal share in the erection of the Revolutionary Tribunal, to which Marie Antoinette and many other victims were sent at his particular instance. On the 9th Thermidor he consulted his own safety by joining in the clamorous accusation of Robespierre, and a few days after his fall, was himself excluded from the committee which his cruel heart, and sometimes declamatory eloquence had so often served. The reaction having set in, he was condemned to transportation, and afterwards to death, by the convention, but the sailing of the ship saved his life, and he remained twenty years in Cayenne before he effected his escape. In 1816 he made his way to St. Domingo, where the mulatto Petion was in power as president of the newly-established republic, by whom he was allowed a small pension. On this pittance the 'resolute unrepentant man' contrived to subsist till the world was finally rid of him in 1819. [E.R.]

BIRD, or BIRDE, or BYRDE, WILLIAM, the admired musician, and great pupil of the celebrated Tallis, was born about the year 1540, and is supposed to have been the son of Thomas Bird, one of the gentlemen of the chapel of Edward VI., where Bird received his first instructions in music as one of the singing-boys. In 1563, he was made organist of Lincoln cathedral, which office he retained till 1569, when he was appointed gentleman of Queen Elizabeth's chapel, and in 1575 became organist to her majesty. Up to the period of his death, which happened in 1623, he composed a great amount of vocal music, chiefly sacred, and from the circumstance that the words he chose were, for the most part, portions of the Romish ritual, it is supposed that he was secretly a professor of that faith, though from the appointments he held, he must have conformed to the reformed religion. It is impossible now to name the number of his works, if we include his instrumental compositions, of which no fewer than seventy-three are to be found in Queen Elizabeth's celebrated Virginal book. Bird is, however, now chiefly known by his great canon 'Non Nobis Domine.' And though some persons have sought to deprive him of the fame of its authorship, and have attributed it to Palestrina, nevertheless those best able to judge have never hesitated to regard it as the work of William Bird, and at a time it will be looked upon as a national work and an enduring monument of his greatness as musician. Bird was highly esteemed, both in his private and public capacity. [J.M.]

BLACK, JOSEPH, born near Bourdeaux, 1728, died 1790. His father, a native of Belfast, resided for some years at Bourdeaux, as a wine merchant. He was of Scottish origin, and had married Miss Gordon, of Hillhead, in Aberdeenshire. The young chemist was first at school in Belfast, and afterwards at the universities of Glasgow and Edinburgh. In 1756, he was appointed lecturer on chemistry and professor of anatomy, afterwards of medicine, in Glasgow. Here he remained till 1766, when he was chosen to the chemical chair in Edinburgh. During this period he made the important discovery of the cause of the difference between limestone and quicklime, and showed that quicklime is limestone deprived of a portion of its weight in the form of carbonic acid. It was by this experiment, while yet a student, that he drew attention to the importance of the use of weights, a precaution which had hitherto been neglected by chemists, and from which omission many erroneous theories had been propagated. His second important discovery was that when water changes into steam, 140° of heat enter into it which are not perceptible by the thermometer, and which he termed *latent*. It is obvious that on this fact depends some of the important circumstances with regard to the economy of the steam engine. These two capital discoveries of Black have been of greater service to science than perhaps any equal number of data ever pointed out by philosophers. Dr. Black was a man of elegance, modesty, and indolence. His active life in science terminated in his thirty-eighth year, for after his removal to Edinburgh he engaged in no inquiries, and contented himself with teaching the science. He was beloved as a friend, medical adviser, and teacher, and his name must long occupy a niche in the scientific temple of fame. [R.D.T.]

BLACKBURNE, FR., a theologian, 1705-1787.

BLACKLOCK, THOS., D.D., was the son of an English artisan settled at Annan, in the county of Dumfries, where he was born, 1721. At the age of six months he lost his sight from an attack of the small-pox, yet arrived at distinction as a classical scholar and poet; not, indeed, to very high rank in the latter respect, but to a degree of recognition exceedingly creditable to his taste and intelligence under the circumstances. For the early cultivation of his mind he was indebted to the kind friends who read, for his behoof, the works of Spenser, Milton, Prior, and Addison, and

subsequently to the friendship of Dr. Stephenson, who procured his admission to the university of Edinburgh. His first attempts in poesy were made in his twelfth year, and a few years later gave proof of his passionate love for music. In 1759 he was licensed to preach in the Scotch kirk, and in 1762 was presented with the living of Kirkcudbright, by the earl of Selkirk; but after two years of strife, abandoned this field of labour, in consequence of objections both to his preaching and his blindness, urged by the parishioners. A small annuity was settled upon him at this time, with which he retired to Edinburgh, where he passed the remainder of his life in literary pursuits, partly employed as a teacher. The best of his poetical pieces is 'The Graham,' an heroic ballad. He married in 1762; and in 1767 the degree of D.D. was conferred upon him by the Marischal College, Aberdeen. The last edition of his works was published in 1796, with a life of the author, by Mr. Spense. Dr. Blacklock died at the age of seventy, July 7, 1791. [E.R.]

BLACKMORE, SIR RICHARD, a very indifferent poet of the time of Dryden, in better repute as an honest man and a physician, died 1721.

BLACKSTONE, SIR WILLIAM, a judge and celebrated commentator on the law of England, was born in London on 10th July, 1723. He was the posthumous child of a silk mercer, and lost his mother in infancy. When about seven years old he was sent to the Charter House, where he was ultimately placed on the foundation. He studied at Pembroke College, Oxford, and in 1743 was made a fellow of All Saints. In 1746 he was called to the bar from the Middle Temple. He had written some popular fugitive pieces, chiefly poetical, one of them called 'The Lawyer's Farewell to his Muse.' His qualifications were not of the kind which bring business through the usual channels, and he retired on his fellowship. Finding, however, that his studies took naturally the direction of the law and constitution of England, he opened a course of lectures on the subject in 1753. Mr. Viner, struck by the importance of a foundation for teaching this important department of knowledge, founded the Vinerian professorship, which Blackstone was the first to occupy in 1758. The popularity of his lectures, and of some minor tracts on jurisprudential subjects, opened the way to practice, and he returned to the law courts, entering parliament in 1761. In 1762 he received a patent as king's counsel, and the honorary office of solicitor-general to the queen. About the same time he married Sarah Clithroe, by whom he was the father of nine children. The first volume of the celebrated 'Commentaries on the Laws of England' was published in 1765. The other three volumes followed in rapid succession. No English law book has been at once so popular and so gravely censured. Both the praise and blame were elicited by the same features. In England, so much weight is attributed to the sentences and individual words in which the law is expressed, that its interpreters generally seek safety from responsibility in employing the exact terms in which it has been originally given forth, in statute, decision, or the opinion of some early sage of the law. This practice gives their works a hard, disjointed, piebald appearance, forbidding as a whole, how-

ever valuable the separate parts may be. Blackstone tried to convert the mass into a readable well-arranged book, and succeeded. He has made many people readers of the law, and more or less instructed in it, who otherwise would not have approached the forbidding science. But on the other hand, the deeper practical members of the profession have pronounced his work unsatisfactory and superficial. To make his book consistent and readable, he endeavoured to give a reason for everything, while other writers told it baldly as it stood. The tendency of his commentaries was thus to make whatever existed in the law appear to be exactly what it should be. Now that many of the things which he commended as the perfection of wisdom, have been abolished as tyrannical and absurd, his reasoning in their support sometimes appears sufficiently ludicrous. The disposition to justify things as they were, made his writings acceptable to government, and they were the more so that in accounts of the origin of national institutions, he ever kept out of sight the more violent revolutionary movements by which the constitution was created. Only in his celebrated passage against the game laws does he take a side contrary to what may be called conservative predilections. The 'Commentaries' are still in active use, and ever call for the services of fresh editors. Blackstone disliked political contention, and declined the opening to high promotion offered to him in the office of solicitor-general. He was, in 1770, appointed one of the justices of the King's Bench, and in a few months transferred to the Common Pleas. He died on 14th February, 1780. [J.H.B.]

BLAIR, ROBT., au. of 'The Grave,' 1700-1746.

BLAKE, WM., an artist and poet of singular genius and originality, remarkable also for his extraordinary visions, 1759-1827.

BLAKE. In all the long list of England's naval heroes, there is not a name more glorious than that of Admiral Blake. Perhaps he deserves to be ranked even highest of all, if we look not merely to the number and brilliancy of his victories, but to the originality of his genius, and to the high character of the commanders and the crews whom he encountered and vanquished. Blake tamed the pride of the Dutch navy when it was in the perfection of equipment, discipline, spirit, and skill. He triumphed over Van Tromp and De Ruyter; admirals who, until they coped with Blake, were reputed invincible. Nelson himself never signalized his genius and his bravery against such competitors as these. Robert Blake was the son of a merchant at Bridgewater in Somersetshire, and was born there in August, 1599. He was well

educated, first at his native grammar school, and then at Oxford, where he was distinguished for his strictness in religion, and for his liberal politics. At the age of twenty-seven, in consequence of his father's embarrassments and death, Blake was called on, as the eldest son, to take the management of the wreck of the family business, and to maintain his mother and several younger brothers and sisters. He did this duty in private life for many years; but on the outbreak of the civil war between Charles I. and the parliament, Blake came forward on the popular side, and raised a troop of dragoons, which he personally commanded. Blake's military career has been eclipsed by the superior lustre of his naval achievements; but he was one of the ablest commanders and bravest soldiers that fought for the Houses; and some of his exploits in the west of England showed genius of the highest order. It would be difficult to find parallels, either in ancient or modern history, for Blake's defence of Lyme against Prince Maurice; or for his daring occupation of Taunton and successful defence of that place against Goring. When the war was over, Blake was made a commissioner of the navy, and placed in command of the ships that were sent against Rupert's piratical squadron. Blake was at this time fifty years old. He may have had some acquaintance with a seafaring life when he was a Bridgewater merchant, but besides his natural courage, decision, and promptitude, he must have possessed remarkable quickness of apprehension and fertility of genius to enable him to adapt himself to his new command in naval war, and to inspire those whom he led, with his own daring, alacrity, and indomitable resolution. He was equally active and sagacious as a reformer of the numerous abuses which he found prevalent in the admiralty, and in every department of the service; and Blake did for our navy in the middle of the 17th century what Earl St. Vincent did afterwards for it at the close of the 18th. Blake's successes against Rupert and other enemies of the commonwealth, caused him to be raised to the chief command of the English fleet when war broke out between the English and Dutch republics in 1652. A series of naval battles ensued, which are unequalled in history for the skill and for the obstinate valour displayed on both sides. Once, and once only, the Dutch had the advantage, on the 29th of November, 1652, when Blake was obliged with less than 40 ships to fight Van Tromp with 80 in the Downs. But our English admiral more than redeemed his fame in the February following, when he completely defeated Van Tromp in their great three days' sea fight along the channel. At last, when after two years of desperate warfare, Blake had nearly destroyed the Dutch navy, Holland was compelled in 1654 to sue for peace. Cromwell had turned out the parliament and made himself protector of England during this period, but Blake declared that a sailor's duty was to serve his country against the foreigner, and he continued to guide our fleets wherever the honour of England required. Cromwell sent him to the Mediterranean, where he made our flag universally respected. He compelled the Maltese knights and the Tuscan government to pay for the seizure of some English merchant vessels, and made the

BLA

pope pay also for having allowed them to be sold in his ports. He awed the dey of Algiers into the surrender of all his English captives; and when the dey of Tunis refused to do the same, Blake burnt the pirate fleet under the guns of the town, destroyed the forts, and compelled the haughty barbarians to obey his orders. He did good service in blockading the port of Cadiz, when the Spanish war began; and his last and most daring enterprise was the destruction of the Spanish Treasure fleet and the fortifications at Santa Cruz in Teneriffe in 1657. Even the royalist English called this achievement 'miraculous.' Blake has been censured for rashness in attempting it, but his last and best biographer, Mr. Hepworth Dixon, has proved that the enterprise was as ably planned as it was heroically executed. This was Blake's final service to his country. He sickened as his victorious fleet returned to England, and he died during the very entrance of his ship into Plymouth Sound. It would be difficult to find a character more purely bright than Blake's. He was sincerely religious, and he was as honest and as generous as he was brave. His morals were stainless. His friendships and his domestic affections were warm; but they never betrayed him into weakness; and he sternly cashiered his own favourite brother who showed want of courage in command of a ship at Santa Cruz. Cromwell caused the great admiral to be buried with the highest pomp at Westminster; but on the restoration of the Stuarts, they heaped eternal infamy on themselves by outraging the mortal remains of the hero before whom they and their despotic friends on the thrones of Europe for so many years had trembled. The great admiral was at the age of sixty when he died in his country's service.

BLOOMFIELD, ROBERT, an amiable man and a pleasing descriptive poet, is chiefly remarkable as an instance of the triumph of literary inclinations over external difficulties. He was born in 1766, at a village near Bury St. Edmund's, where his father, a tailor, left him an orphan in infancy, and the widow taught a little school. He was a journeyman shoemaker in London, when he wrote his pastoral poem, 'The Farmer's Boy.' This, the work of his that is most likely to live, was published in 1800, and attained an extraordinary popularity, well deserved in itself, and natural in the barrenness which then reigned in poetry. Among his subsequent volumes were 'Good Tidings, or News from the Farm,' and a collection of 'Rural Tales' and other pieces. His feeble health impeded efforts made to provide for him by persons of rank who took an interest in the self-taught poet; and after much distress and sickness, which in the end affected the mind as well as the body, he died at Sheffield in Bedfordshire in 1823.

 BLUCHER. GEBHART LEBRECHT VON BLUCHER was born at Rostock in Mecklenburg-Schwerin in 1742. His family was ancient but poor. Young Blucher enlisted in a regiment of Swedish hussars at the age of fifteen, but soon afterwards he entered the army of Prussia, the country which

he was destined to serve so ably. He was present in some of the battles of the seven years' war; and acquired a high reputation as a daring and resolute soldier, though his coarse and violent temper brought him into frequent difficulties, and impeded the rate of his promotion. He retired from the service in 1770, in anger at a supposed slight, but returned to it again in 1786, and when the wars of the French revolution commenced, Blucher was colonel of a regiment of Black Hussars. He commanded the left wing of the duke of Brunswick's army in 1783, with great credit for skill as well as courage; and in 1806, in the second war between France and Prussia, he was commander of the Prussian cavalry. After the disasters of Jena and Auerstadt, Blucher signalized himself by the ability of his retreat, and by his desperate resistance before he capitulated to his pursuers. From 1806 to 1813 Blucher lived in retirement, watching eagerly for Prussia's opportunity for rising against her French oppressors. This came after Napoleon's Russian campaign of 1812. Blucher was now seventy years old, but his spirit was as fiery as ever, and there was no general in the war of German liberation whom his countrymen followed with more enthusiasm, or who did more for the rescue of the fatherland. He commanded an army formed partly of Prussians and partly of Russians, which was called the army of Silesia. On August 26, 1812, he routed and nearly destroyed the French army under Marshal MacDonald, at the Katzbach, a victory that redeemed the reverses of Lutzen and Bautzen. Blucher was by Napoleon's own confession, the keenest, the most indomitable, and the most formidable of the foes, who now drove the French back across the Rhine. No reverses disheartened him, no difficulties appalled him; and it was only when held back by the more cautious policy of other chiefs of the allies, that the veteran was ever heard to express displeasure or anxiety about the progress of the war. In 1814, when the allies entered France, Blucher was again the first and the fiercest among Napoleon's assailants. He had the advantage over him at Brienne; he was surprised and severely punished by the emperor at Montereau; but he was soon pressing forwards again upon Paris, fought desperately at Craon, was victorious at Laon, and finally joined in the attack upon Paris on the 30th March, 1814, which caused the surrender of the French capital, and the end of the war. When Napoleon returned from Elba in 1815, Blucher commanded the Prussian army in Belgium, which in conjunction with the British army under Wellington, fought the campaign of Waterloo. Blucher's army was the first that the French emperor attacked; on the 16th of June the obstinate battle of Ligny took place, in which, as Blucher himself remarked, the Prussians lost the day, but not their honour. Though forced to retreat in consequence of this defeat, Blucher had his army rallied and ready for action again before twenty-four hours were over; and on the 18th he marched according to promise to aid Wellington at Waterloo. Blucher came on the field in force towards the evening of that ever-memorable day. He led his columns on Napoleon's right flank and rear, with the intention of not only succouring the English,

but of utterly crushing the French. His success is well known. Often repulsed, and at last fiercely charged in front by the duke's army, the French were unable to hold back Blucher on their right, and were swept from the field in irretrievable ruin. After that decisive battle Blucher advanced into France in conjunction with the duke, and a second time was present at the surrender of Paris. Blucher's fierce animosity against the French made him wish to storm their capital, and he expressed a purpose of shooting Napoleon himself on the very spot, in the ditch at Vincennes, where the Duke D'Enghien had been murdered. He yielded, however, though sullenly and reluctantly, to the sage advice of his English colleague. Blucher died in extreme old age at Krieblowitz, in Silesia, September 12, 1819. He was almost idolized by the Prussian nation, who justly looked on him as the saviour of the country. Blucher knew little of strategy, but he had the good sense to be aware of his own deficiency, and to follow in military plans and manœuvres the able advices of General Gneisenau, to whom he always frankly expressed his obligation. Old 'Marshal Forwards' (as the soldiers loved to call Blucher) exercised an animating influence over his men, which was invaluable, amid the general prostration of spirit which the successes of the French before 1812 had created; and except our own Wellington, no man did more than Blucher towards the liberation of Europe from Buonaparte's military oppression. BLUM, J. CHR., a German lyric, 1739-1790.

BLUM, ROBERT, one of those active spirits raised to eminence by the revolutionary events of 1848. He had spent his early life in so much obscurity that little is known of him. He is said to have been born at Cologne in 1807, to have been a working jeweller travelling about after the manner of the young German handicraftsmen, and to have settled in Cologne in 1830, as box opener of the theatre. Afterwards he excited attention among the friends of advancement in Germany by his contributions to the press, and especially by his exposures of the ultramontane religious party in the affair of the holy coat of Treves. When the parliament of Frankfurt was embodied in 1848, he represented Cologne, and became distinguished as the leader of the extreme revolution party. He had a rapid denunciatory eloquence, whence he was called the German O'Connell. He mixed himself up with the revolutionary movements at Vienna, and on their suppression was condemned by a court-martial to be shot on the 9th of November, 1848. The act was significant, as the beginning of the stern measures pursued by Austria against the liberal party in Germany.

BLUMBERG, C. G., an Orient. scholar, 1664-1735.

BLUMENBACH, JEAN FREDERIC, a celebrated comparative anatomist, physiologist, and naturalist, was born at Gotha in 1752. He died at Gottingen in 1840. Whilst still a child the young Blumenbach exhibited a strong inclination for those pursuits which in after years rendered him so distinguished. He studied first at the university of Jena, then at Gottingen. At this latter place he succeeded in persuading the university to purchase a large collection of objects of natural history, philology, and ethnology, belonging to one

of the professors. He was appointed curator of this museum, which he soon rendered famous by the extensive additions he made to it. Shortly afterwards he was elected professor of medicine in the university; an appointment which he held for sixty years. During all this time he devoted himself with uninterrupted assiduity to the study of comparative anatomy, physiology, and natural history, especially his grand study, the natural history of man. He was the first to establish the division of the human race into five varieties, the Caucasian, Mongolian, Ethiopian, American, and Malay. But the grand idea predominant in Blumenbach's mind, was the subject of the unity of the human species. To establish this he proved from anatomy and physiology that a wide interval, without connection, without transition, separates man from every other species of animal. He shows that not only no species of animal approaches him, no genus does, no family even. The human species is one, and one alone. His numerous works upon this subject, upon natural history, physiology, and comparative anatomy, have obtained for Blumenbach a world-wide reputation. He held highly responsible offices connected with his university and the town in which he lived. He maintained a correspondence with the most eminent philosophers of all countries; received all scientific persons who visited Gottingen, and was justly esteemed the patriarch of the university. The town of Gottingen owed most of its prosperity to him. Seventy-eight learned societies reckoned him amongst their members. Medals were struck in his honour. Each anniversary of his professorship was celebrated by fêtes, and prizes were established in his name. Beloved by his pupils and townsmen, revered by his country, he closed a calm and peaceful life at the advanced age of eighty-eight. [W.B.]

BOCCACCIO, GIOVANNI, is illustrious as one of the three founders of the literature which arose, in the Italian language, in the course of the fourteenth century. Dante's extraordinary poem led the way; Boccaccio and Petrarch were the restorers of Greek learning to Italy, and thus the prompters of a new literary spirit; and, while the latter of the two elaborated the beautiful language of Tuscan in its metrical shape, the former was the earliest writer of symmetrical and polished Italian prose.—Boccaccio was the natural son of a Florentine merchant and a Frenchwoman. He was born either at Florence or at Paris in 1313, was educated at Florence till his tenth year, and was then for six years the apprentice of a merchant at Paris. But his inclination, always averse to commerce, and not less so to law, soon led him, in spite of his father's wish, to devote himself wholly to literary pursuits. His authorship began at Naples, when he was not far from his thirtieth year. His first noted production was the 'Filicopo,' an indifferent prose romance, in which he celebrated, under fictitious names, his attachment to a natural daughter of king Robert. Much more meritorious was the 'Teseide,' a poem in the Italian 'Ottava

rima,' of which measure Boccaccio is commonly believed to have been the inventor. In costume this work is a chivalrous romance, Theseus and the sons of Oedipus being invested with feudal manners and characters, and made the heroes of adventures wearing a romantic, not a classical air; but in regularity of design and purity of language, it was a mighty step beyond the rude effusions of the mediæval minstrelsy. It has interest for us, as having probably prompted the 'Knight's Tale' of Chaucer; while the story was also used by our poet Lidge, and in a fine drama with which Shakspeare has been supposed to have had some concern. At Naples, likewise, about 1350, and on the suggestion (it is said) of Queen Joanna, was composed 'The Decameron,' the work on which Boccaccio's celebrity is most securely founded. There was to be found already, among the literary stores of the earlier middle ages, a vast stock of invented stories, which had arisen in northern France sooner than in any other European country, but had lately begun to be related in the Italian tongue. From those older sources, especially the French familiar tales called 'Fabliaux,' Boccaccio borrowed freely. The same section of the popular literature suggested to him the idea of connecting a number of separate stories by one leading thread. He represents a party of gay ladies and gentlemen as retiring from Florence to a villa in the neighbouring hamlet of Fiesole, during the plague of 1348, and as amusing their leisure by the recital of the stories which make up the greater part of the book. It derives its name from the ten days during which the diversion lasted; and, ten tales being told each day, the number in all is a hundred. In point of style, the 'Decameron' is admittedly one of the masterpieces of the language, in which it is written; it is admirable also for its grace and liveliness in narration. These qualities are, in many of the tales, debased by a lamentable grossness; but some others, such as the 'Griselda,' are not only morally fine and elevated, but seriously and pathetically interesting. The story of 'Giletta of Narbonne' was, indirectly, the original of 'All's Well that Ends Well;' and other pieces of the collection were imitated by Chaucer and by Dryden.—Not long after the composition of the 'Decameron,' Boccaccio came into possession of a considerable patrimony; and thenceforth his favourite occupations were the study of the Greek tongue and its literature, (then hardly known at all in Western Europe,) and the collection of manuscripts of the classical authors. Residing chiefly at Florence, he was employed on several public missions, which gave him opportunities for prosecuting those researches; and one of these made him acquainted with Petrarch, who was ever afterwards one of his dearest friends. About his forty-eighth year the exhortations of a Carthusian monk, strengthened by an alleged supernatural vision, inspired him with thoughts so serious, that he meditated retiring into a convent. The remonstrances of Petrarch diverted him from this step; but the impression which had been made produced a beneficial amendment in his views and conduct, and awoke much sorrow both for the excesses of his earlier life and for the licentiousness of the 'Decameron.' To those later years belong chiefly his works in Latin prose, which, though they were valuable as

aids in the infancy of classical studies, are now curious only as monuments of the past. Some of his smaller Italian compositions likewise are unimportant. His last undertaking was the delivering of public comments on the great poem of Dante, in a lectureship to which he was appointed by the Florentine magistracy. The zeal with which he prepared himself for this task was said to have hastened the decay of his health. He died in Tuscany in 1375. [W.S.]

BOEHM, W. A., a German divine, 1673-1732.

BOEHM, or BEHMEN, JACOB, surnamed 'Teutonicus,' was born at Old Seidenburgh, a short distance from Gorlitz in Upper Lusatia, 1575. His parents being poor, he was employed in tending cattle from a very early age, and afterwards apprenticed to a shoemaker, a business which he continued to follow after his marriage in 1594. He had the good fortune, for one in his station at that period, to learn reading and writing at the village school, and this was all the education he received, the terms from the dead languages introduced into his writings, and what knowledge he had of alchemy or the other sciences, being acquired in his own rude way subsequently; chiefly, perhaps, from conversation with men of learning, or a little reading in the works of Paracelsus and Fludd. Whilst he was a herd boy, as the legend runs, he once retired to a little stony crag, known as the Land's Crown, and there discovered an opening through which he penetrated into a rocky enclosure, where he saw a great wooden vessel full of money, but was too much alarmed to take any of it, and when he returned with his companions they sought often and with much diligence, but never found the entrance again. This circumstance made a deep impression on Boehmen, the rather as a stranger arrived there some years later, who was skilled in the finding out such magic treasures, and taking it away, did indeed enrich himself, but perished by an infamous death, the treasure, it is said, having

lain there under a curse to him who should ever become possessed of it. Another legend, which relates that a stranger, of a severe but friendly countenance, came to his master's shop while he was yet an apprentice, and warned him of the great work to which God should appoint him, exhibits the singular faith of Boehmen in the Divine guidance; and the religious habits in which he was thus encouraged soon rendered him as conspicuous among his profane fellow-townsmen, as his humility and love of peace among the arrogant clergy, by whom he was afterwards persecuted. His study of the Sacred Scriptures had been constant and profound, but more especially, if we may judge from the spirit of his theological system, of the Apocalypse and the writings of Paul. His letters manifest the deep earnestness of his convictions, and the sincerity with which he represented himself as the subject of Divine inspiration. 'Art,' he says, 'hath not written here, neither was there any time to consider how to set it punctually down according to the right understanding of the words, but all was ordered according to the direction of the Spirit, which often went in haste; so that in many words letters may be wanting, and in some places a capital letter for a word; for the penman's hand, by reason he was not accustomed to it, did often shake; and though I could have written in a more accurate, fair, and plain manner, yet the reason was this, that the burning fire did often force forward with speed, and the hand and pen must hasten directly after it, for it cometh and goeth as a sudden shower.' 'I, indeed,' he continues, 'can write nothing of myself, but as a child which neither knoweth nor understandeth anything, which neither hath ever been taught, but only that which the Lord vouchsafeth to know in me.' The genuineness of his humility, often expressed in this or similar language by Jacob Boehmen, and the simplicity of his faith, cannot be doubted by those who have examined his works, any more than the fine religious thoughts, and the depth of mystic wisdom contained in them. The first of these was called the 'Aurora,' or 'Morning Redness,' and was written after he had been for seven days together, as he expresses it, 'environed with the Divine light;' so that he discerned all things in their inward essences, as explained subsequently in his 'Signatura Rerum,' or corresponding forms of things. Experiences of this kind, indeed, were repeated over a period of twelve years, before he was driven to embody his apprehensions in external writing, and when he did so, his MS. was handed about among those who chose to borrow it, until the clergy and the town council interfered, and finally, not only proscribed his writings and prophecies, but poor Boehmen himself, who was constrained to depart for Dresden; a catastrophe which will be better understood when it is known that many passages in his writings are as red thunderbolts launched against oppression and sham religion. The space to which we are limited renders it impossible to give even an outline of his system, but we may observe generally, that it contains the first principles of Oriental metaphysics, as delivered by the ancient sages, and contained in the fragments of their philosophy, and that its brilliant lights and definite outlines only fade away into vacuity, where they ought to be brought

down into the physical nature of things. This defect prevented him from acquiring the world-wide fame of Newton, who applied the principles demonstrably contained in the writings of Jacob Böhmen to the planetary system; and the same deficiency has ever prevented the poor uninstruced seer of Gortitz from ranking with the philosophers, or indeed with the no-philosophers of whom anything intelligible can be reported, down to the present time. The key to all his works, perhaps, is contained in the right understanding of the seven universal properties, three of which are hidden under fire and three manifested; the fire, or Spirit, being as the magnetic blaze which brings the first three into the last; next to which may be the study of fire in ten forms, beginning with the eternal liberty, or silent tranquillity of God without nature; and after this the three principles—darkness, light, and generation. The greatest master of Böhmen's philosophy was a German named Frere, some of whose manuscripts are in the British Museum, and through whom and his acquaintance with the family of Dr. Francis Lee, William Law derived his knowledge, as well as the diagrams by which the principles are in some measure illustrated. As an apostle of religion he has had followers in all parts of Europe, but as he never sought to establish a sect in his lifetime so all efforts of this kind have failed since, and we must look for the real proceeds of his influence in such movements as those of Primitive Wesleyanism and the Moravian Brethren; add to which the most intelligent of the later mystics, followers of Law and Böhmen, accepted the revelations of Swedenborg. Böhmen died happily on Sunday, November 18, 1624. Early in the morning he called his son and asked him if he heard that excellent music, and on his replying in the negative, directed him to open the door that he might hear it the better. Asking afterwards what the clock had struck, he was told 'two,' upon which he remarked that his time was yet 'three hours hence.' When it was near six he took leave of his wife and son, blessed them, and said, 'Now I go hence into paradise!' He then bade his son turn him, and with a deep peaceful sigh, his spirit departed. BOEHME, J. E., a Ger. historian, 1717-1780.

BOEHMER, G. R., a cel. botanist, 1723-1803.

BOERHAAVE, HERMAN, physician, the pupil of Pitcairn. He was the son of the parish clergyman, and b. 1668, at Vorhout, near Leyden, d. 1738. Boerhaave presents a striking example of the successful results of the proper exercise of talent, integrity, and industry. Without friends, and left an orphan when a boy, he became one of the most popular physicians and teachers in Europe, and by the soundness of his views, and good sense, contributed to elevate the profession to which he belonged from the degraded and empirical condition in which it was previously involved. Living at a time when all natural studies together did not embrace so much as one science in the present day, it is not to be expected that any of his labours should now survive. But learned in the knowledge of the medicine, chemistry, and botany of his time, he must be viewed as one of the dispellers of mysticism, and founders of a great fabric which the revolutions of centuries cannot even perfect, while

to his successors must be left the duty of recognizing the efforts of such true creators of science. His works were the 'Institutions of Medicine,' 'Diagnostic and Curative Aphorisms,' a 'System of Chemistry,' and a small work on *Materia Medica*. His memory is still ardently cherished in the university of Leyden, and in the Botanic Garden, where some relics of the great physician are still extant; while a portrait of him adorns one of the halls. Boerhaave was a successful practitioner, as he is said to have left upwards of £200,000. [R.D.T.]

BOESCHENSTEIN, J., a Heb. gram., 15th ct.

BOETHIUS, ANICIUS MANLIUS TORQUATUS SEVERINUS, was born at Rome of a rich and noble family about 470. The first eighteen years of the orphan were spent in diligent study at Athens, and he returned to Rome a young man of unequalled intellectual accomplishment. Soon after he entered the senate as a member of the patrician order, and under Theodoric, king of the Goths, obtained high preferment. Boëthius had been consul in 487 under Odoacer, king of the Heruli, and in the eighteenth year of Theodoric he was elevated a second time to the same dignity. His domestic life was one of undisturbed felicity, and his prosperity had also been crowned by seeing his two sons advanced to consular rank. But a sudden and fatal reverse overtook him, and after more than twenty years of faithful service, he was, during the period of his third consulship, accused of treasonable correspondence, condemned and banished to Pavia, where after more than a year's imprisonment, he was by royal mandate beheaded in prison, October 23, 526. It is said to have been a vindication of the doctrine of the Trinity, that stirred the Arian prejudices of Theodoric and his courtiers against the orthodox philosopher and patriotic statesman. His most famous work, 'De Consolatione Philosophiæ,' was composed during his last year's confinement at Pavia. It has both prosaic and poetical chapters, and dialogues in its five books; and philosophy personified adduces comfort to the prisoner, not from Scripture, but from Plato, Aristotle, and Zeno. His other works are numerous, and on a vast variety of subjects. He translated Plato and Euclid,—his special favourites,—commented on Aristotle, Cicero, and Porphyry, published versions of Ptolemy and Archimedes, and wrote on music, rhetoric, mathematics, metaphysics, and theology. It is hard to say whether Boëthius was a Christian at all in the proper sense of the term. His pure theism, his ideas of prayer, and his trust in a Divine Providence, appear to have been borrowed from those opinions with which Christianity was leavening indirectly so many classes of society, who did not formally enter the communion of the church. His works were published with notes at Basle, folio, 1570. [J.E.]

BOILEAU-DESPREAU, NICOLAS, born in 1636, was the son of an officer of the parliament of Paris, and belonged by descent and connections to a family of lawyers. While his two elder brothers were precocious in youth, Nicolas was slow as well as sickly; and he, the future satirist, was described by his father as a good-natured boy, who would never speak ill of any one. He was a diligent student, but showed little either of invention or of ambition; although, mistaking his vocation as others then mistook it, he wrote a boyish tragedy. At the age of twenty-one he was admitted as an advocate; but his neglect and dislike of professional pursuits scandalized his relations. He was allowed for a time to contemplate the clerical profession, and held for some years a sinecure benefice; which, however, on determining not to take orders, he resigned, refunding also all the profits.—He now betook himself wholly to letters; and, beginning in 1666 his series of *Satires* in verse, which at length amounted to twelve, he was at once hailed as a valuable contributor to a literature, in which Corneille, though in the full career of his genius, was as yet appreciated but by few, while Molière was only beginning to write. French versification, and French style, alike took a new and finer shape in his hands. The didactic kind of poetry to which he had devoted himself, was cultivated with a success still more brilliant in his series of *Epistles*. Even now, if his French admirers hesitate in asserting that the *Satires* come up to the nice perfection of their Horatian models, they extol the *Epistles* as decidedly superior to those of Horace. Boileau seemed to have determined on furnishing materials for completing the parallel. Besides a few odes and other small pieces, which are confessedly poor, he again measured lances with the Roman poet, by publishing in 1673 his '*Art Poétique*,' a poem in four cantos. In the course of that year appeared the first four cantos (increased afterwards by two indifferent ones) of '*Le Lutrin*,' a mock-heroic poem. It celebrates a contest as to the placing of a pulpit, which broke out among the canons of the Chapel of Saint Louis, attached to the Palais de Justice.—He was now high in favour at court, and received, with Racine, a joint appointment as historiographer of Louis XIV. He had, long since, been universally acknowledged by the public voice as one of the most distinguished among those men of genius whose writings adorned the Augustan age of France. He lived in cordial intimacy with most of those literary men who belonged to the first rank, such as Racine, Molière, and La Fontaine; and he was really both a prudent and modest man, and a kindly one, and even exhibited frequently an honourable liberality and generosity. But he had been, and was, merciless to the smaller citizens of the republic of letters; and many enemies were necessarily made by a man who often, by one epigrammatic couplet, was able to destroy the reputation and the livelihood of a poor dramatist or romance-writer. Accord-

ingly Boileau was not received into the Academy till 1684; and then only in obedience to a significant hint from the throne. The later years of his life were embittered by much sickness and infirmity; and he died of dropsy in 1711, bequeathing almost all his property to the poor.—The principal works of Boileau have already been named. They place him as one of the members of a literary triumvirate, to which belong, with him, Horace and Pope. While none of the three is a poet of the highest class, the distinctive elements of poetry are very much more scanty in the French critic and versifier than in either of the others. Pope owed much to him, receiving many hints, and not infrequently translating from him literally; and in the art of terse and striking expression, our countryman, successful as he is, can scarcely be pronounced equal to his model. Pope's juvenile '*Essay on Criticism*' is by no means so masterly as the '*Art Poétique*;' but '*The Rape of the Lock*,' if it wants that air of comic verisimilitude, which is so striking in the '*Lutrin*,' rises far above it through its supernatural and other imaginative ornaments, to which nothing similar is presented by the French poet, or could have been invented by his timid and sluggish fancy. BOLEYN, ANNE, q. of Henry VIII., 1507-1536.
BOLINGBROKE, HENRY ST. JOHN, Lord, an orator, statesman, and philosophical essayist, was born at his father's seat at Battersea, on 1st October, 1678. His family was divided between the two great contending parties of the seventeenth century, and it so happened that the high Tory statesman and sceptical philosopher was educated by a presbyterian grandmother, under the influence of Daniel Burgess, the dissenting divine. Little is known of his early education. In 1700 he married Frances, daughter of Sir Henry Winch-

comb, but there was little happiness in the match, or cordiality between them, for young St. John's habits called for more than the average amount of marital liberality. He made himself renowned for the extent of his dissipation in a very dissipated age. Entering parliament in 1701, he began his political career. His model was Alcibiades, and he was ambitious of showing that the pursuit of pleasure and of political ambition might be united in the character of one possessed of his brilliant attainments. In an age when statesmen were liable to little responsibility, he in a great measure succeeded. With his friend Harley he joined the ranks of the Whigs, and changing with him became his colleague in the celebrated Tory ministry, which in 1710 owed its existence to the triumph of Abigail Hill over the duchess of Marlborough. His bold unscrupulous temper made him the ruling spirit in a government now condemned by all parties for its recklessness. Ere its extinction, however, by the death of Queen Anne, a rivalry between St. John and Harley had ripened to a deadly animosity and struggle for ascendancy. In 1712 St. John was raised to the peerage as Viscount Bolingbroke. It is remarkable that none of the speeches delivered by him in either House have been preserved. Their absence makes a gap in our senatorial oratory. They are reputed to have been very brilliant, and his published works have a full sententiousness much better adapted to oratory than to literature. There has always been a great question whether Bolingbroke was one of those who were plotting for the restoration of the exiled house on the death of Queen Anne, and the light which has been thrown on the mystery in later times, leaves little doubt of his guilt. He immediately felt, along with his colleagues, that he must count on the hostility of the new government. For some time he seemed to court and brave investigation, but on the 25th of March, 1715, following up well-laid arrangements he escaped secretly to France. He was attainted on impeachment, and justified the condemnation by entering the service of the Pretender. He was soon disgusted with this trifling narrow political arena, and showed extreme anxiety to be reinstated at home. He received permission to return, and by special statute his property was restored, but Walpole would not give so dangerous an enemy the means of attacking him in debate, and his attainder was not reversed so as to restore him to his seat in the Lords. He occupied himself in writing bitter pamphlets and other works against the government. He had taken for a second wife the Marquise de Vilette, whose social and religious views seem to have been adapted to his taste. He died on 15th December, 1751. His works on mental philosophy, and the foundations of belief, received with a cry of execration, but now little read, were published after his death. [J.H.B.]

BOLIVAR. SIMON BOLIVAR was born in 1783 at Caraccas in Venezuela in South America. He was educated in Europe, and returned to America in 1809; holding the rank of lieutenant-colonel in the Spanish service. When the revolutionary movements commenced, by which the Spanish provinces in America sought to establish their independence, Bolivar took an active part in them, and in 1813 he was at the head of the army

which liberated the greater part of Venezuela from the government of Spain. He was driven out of Venezuela in the following year by the Spanish troops, but (after one unsuccessful attempt) he forced his way back in 1817, at the head of a force which he had collected at St. Domingo, and recommenced the war of liberation. In 1821 Venezuela and New Granada were freed from Spain, and these two provinces were united into a republic, called Columbia, of which Bolivar was president. Bolivar next took an active part in aiding in the liberation of Peru, and was made dictator of that country in 1822, an office which he resigned when Peru was completely liberated by the victory of Ayachrecho on 9th December, 1824. The inhabitants of Upper Peru formed their country into a separate republic, which they named Bolivia in honour of Bolivar. Bolivar's desire seems to have been to unite all the liberated provinces of South America in one federal republic, but his latter years were passed amid incessant tumults of faction, and frequent outbreaks of civil war, and he died at last broken in health and spirits on the 17th December, 1830. He had previously resigned his presidency of Columbia, and taken leave of the inhabitants of that state in an address, in which he solemnly asserted the purity of his motives throughout his career, and complained bitterly of calumny and ingratitude. Amid the conflicting and obscure accounts of the South American wars of independence, it is difficult to judge correctly on many points as to which the character of Bolivar has been called in question. But his bravery, his energy, and the services which he rendered against the Spaniards are undeniable. Nor should we lightly credit charges of selfish ambition, of cruelty, and perfidy against a man, who unquestionably devoted his own ample fortune, as well as his time and life, to his country; who more than once voluntarily laid down absolute power; who abhorred slavery, and set the example of emancipating the numerous slaves on his own estate; and who entertained the most liberal and enlightened views as a lawgiver, and as an earnest promoter of national education.  BOSCOVICH, ROGER JOSEPH, a learned and profound Jesuit; born at Ragusa in 1711; died at Milan in 1787. The writings of Boscovich are numerous and important. His dissertations on 'Vires Vivæ,' on 'Light,' and on the 'Solar Spots,' gave their author highest rank amongst the physical philosophers and astronomers of the time. He grasped the great conceptions of Newton, and did much to hasten the general acceptance of the theory of gravitation; but his chief claim on the attention of posterity, rests on the speculations in his 'Theoria Philosophicæ Naturalis'—speculations which touch on one side, the afterwards celebrated hypothesis of *monads*, and seem to point towards a physical scheme of Idealism. According to Boscovich the ultimate elements of matter are atoms, or *points* indivisible and without extension. Each atom, or point, being surrounded by numerous concentric rings of influence—alternately of attraction and repulsion, one atom may exist towards any other in various relations, determined by their distance from each other. For instance, the two atoms may be within the sphere of each other's attraction—*then* is the body *solid*: or the two atoms may be within the sphere of mutual repulsion,—*then* is the body *gaseous* and *elastic*; or two atoms may be so placed that they neither repel nor attract, being on the line of indifference,—*then* is the body *liquid*. Gravitation, or universal attraction, is, according to this view, the relation which atoms bear to each other after they have passed beyond the smaller or molecular distances; while the phenomena of physics and chemistry depend upon and arise out of their various and varying relations while they are within these infinitesimal or molecular distances. This singular and probably far from inaccurate conception, destroys the common notion that matter is *brute* and *inert*; and represents the phenomena of Nature as the immediate issue of Active Forces;—a view which the progress of modern science unquestionably favours. ADDRESS

moved in 1642 to Paris, where being destined for the clerical profession, he prosecuted the requisite studies at the college of Navarre. He was distinguished by his attainments in classical and patristic lore—two branches of knowledge which are deemed of indispensable importance in the Roman Catholic church; but to these he added also an extensive and familiar acquaintance with the Sacred Writings, the perusal of which, in a stray copy which chanced to fall into his possession, made a deep and indelible impression on his juvenile mind. At the age of sixteen he began by occasional exhibitions, to evince his extraordinary powers of pulpit eloquence; and having, on his becoming duly qualified for the discharge of the sacred functions, been appointed to the church of Metz, first as canon, and successively as archdeacon and deacon, he there established his reputation as one of the most eminent preachers in France. An invitation to Paris was ere long the result of his high provincial fame; and having by his preaching before the court won the favour of Louis XIV., he was intrusted with the superintendence of the dauphin's education. It was for the benefit of his royal pupil that he composed his abridged view of 'Universal History,' one of the most admired and valuable of his works. On the completion of the prince's studies, he was rewarded for his zeal and fidelity in the discharge of that responsible duty, by promotion to the see of Meaux, and soon after was appointed a counsellor of state, and almoner to the duchess of Burgundy. That elevated position he adorned by the splendour of his talents and the extent of his learning; nor was he less distinguished by his zeal for the diffusion of religion throughout his diocese, and his energetic defences of the catholic church. In fact, his life was divided between the performance of his proper duties as a bishop, and the composition of his controversial works. The strength and sincerity of his religious convictions have never been assailed, any more than his eminent talents and learning have been called in question. But the violence of his temper, and the cavalier treatment he gave to the amiable Fenelon, have exposed him to severe and merited censure. The latter years of his life were passed in retirement. He was a voluminous author. Amongst the numerous works he left behind him, his 'Funeral Orations' are held in high admiration, although it is to be regretted that he often prostituted his great powers of oratory in eulogizing unworthy characters. His efforts in the protestant controversy were met by the energetic opposition of Claude and other divines among the French protestants, as well as of Archbishop Wake in the Church of England. This great genius died at Paris on 12th April, 1704, in the seventy-sixth year of his age. [R.J.]

BOUGAINVILLE, LOUIS ANTOIN DE, was born at Paris, 11th November, 1729, and though educated for the profession of law, joined the army at an early age. Soon after his enlistment, he published a treatise on the Integral Calculus; and during a residence in London as secretary of legation, he was elected a fellow of the Royal Society. In the war which terminated in 1760 with the loss of Canada to the French, Bougainville gained great distinction. In 1763-64 he performed two voyages to the Falkland isles, where he founded a colony, himself being the first projector, and a large proprietor jointly with the merchants of St. Malo. In 1766 this colony was given up to Spain on payment of 500,000 crowns; and Bougainville was sent out, 15th November, to make the formal transfer, and with instructions thereafter to complete the circumnavigation of the globe. He had but two ships, the Boudeuse, 26 guns, 214 men, and the Etoile, store ship. He safely accomplished the object, visiting many islands in the intertropical Pacific, some of which were till then unknown, but without making any remarkable discovery, and reaching St. Malo on 16th March, 1769. He was accompanied by Prince Sieghen of Nassau, and the naturalist Commerçon. Bougainville published a pleasing account of his voyage, which was translated by Forster in 1772. He afterwards commanded one of the ships of war, sent to aid the Americans in their great struggle with Britain. He died at the age of eighty-two, 31st August, 1811. [J.B.]

BOUGAINVILLE, JEAN PIERRE DE, elder brother of the above, was a literary man of some note, and held several important offices in Paris. One of his poems is said to contain the germ of Pope's 'Universal Prayer.' He died in 1763, at the early age of forty-one. [J.B.]

J., Comte De, distinguished as a moderate republican, and also as a political writer and orator, was born 1761, appointed to the civil tribunal at Nanci, 1793, and to the council of 500 in the year 1795. He took an active part in the revolution of the 18th Brumaire, and was remarkable for his fidelity to Napoleon, whom he regarded as the representative of national independence, and of the principles of the revolution. He was proscribed by the Bourbons at the second restoration, and passed some years in exile, when he wrote his 'Tableau Politique des règnes de Charles II. et de Jacques II.' containing his review of the causes which led to the establishment of the English republic in 1649. Buonaparte made honourable mention of him at St. Helena, as a fearless and honest man. The last years of his life were passed tranquilly in the midst of his family. [E.R.]

BOURBOTTE, N., one of those remarkable characters raised to an unenviable notoriety by the French revolution, whose intrepid bearing might be mistaken for heroism, if its fire were not darkened by savage cruelty and ambition without principle. Little is known of his early life, but he was about twenty-seven years of age when deputed to the national convention, 1792, as a member of the Jacobin party. He now signalized himself by voting for

the death of the king 'sans appel et sans surseins' (without appeal and without delay), and afterward of the unhappy Marie Antoinette. Commissioner to La Vendée by the national convention, he gave evident proofs of his military courage and administrative talents, but committed excesses which led to his recall and accusation by the Committee of Public Safety. He had the good fortune to be acquitted, and was subsequently appointed to the army of the Rhine, where he again manifested soldier-like qualities, tarnished by the same faults. In 1794 he commanded openly in the insurrection which overthrew the power of Robespierre, and was on the high road to the dictatorship when he and his colleagues were crushed by Legendre at the head of the sectional forces. Condemned by the revolutionary tribunal, he stabbed himself with dagger, but survived to see his fellow-prisoners beheaded, and to undergo the same fate. He retained his courageous self-possession to the last moment, and manifested in his dying words the unconquerable spirit which animated him. [E.R.]

BOURDON, LEONARD JOHN JOSEPH, a member of the French convention in 1792, is chiefly memorable for the interest he took in national education, and for his part in the denunciation and arrest of Robespierre, on which occasion he shared the command of the national guard with Barras. He was also charged with the translation of the remains of Marat to the Pantheon, and directed the ceremonies of their entombment. When his party was defeated by Legendre, Bourdon was denounced as an assassin, and met the charge by heading a conspiracy which broke out 1st April 1795, and led to his imprisonment at Ham. Restored to liberty by the amnesty of October in the same year, he afterwards appeared in the council of 500, only to hear the same accusation repeated this time by Boissy D'Anglas. The charge was not pressed against him in legal form, and Bourdon was subsequently appointed agent for the directory at Hamburg. Though a violent Jacobin it is by no means clear that he was the sanguinary monster sometimes represented. He died a natural death as master of a primary school in Paris, some years after the re-establishment of authority by Buonaparte. [E.R.]

BOURDON, FRANCIS LOUIS, one of the most sanguinary members of the convention in 1792, obtained his seat by favour of Leonard Bourdon who had been elected for two departments, and allowed his namesake, though not related to him, to usurp one of them. He was notorious for the atrocity of his imprecations in the convention always securing his own safety by attaching himself to the strongest side. He was among the fifty-three deputies condemned to transportation on the 19th Fructidor, (6th Sept., 1797), and died soon after his arrival at Cayenne. [E.R.]

 BOURGEOIS, SIR F., a painter, 1756-1811.
 BOURGET, JOHN, a Fr. antiquary, 1724-1775.
 BOURGOING, JOHN FR., Baron De, a French historian, ambassador of the republic, 1748-1811.
 BOURIGNON, F. M., a Fr. antiq., 1755-1796.
 BOURIGNON, ANTONIA, born at Lille, 1616, is remarkable for her claims to illumination, and her singular history, the former supported by a body of followers who were once numerous in France and Scotland. She was unhappy in her parentage and education, her mother having conceived an aversion for her, and treated her with severity, from her earliest years, chiefly, it is supposed, on account of her uncomely appearance, but at last, perhaps, in revenge of the perverse temper which she had herself excited. As the poor girl advanced in years with no one to love or care for her, she gave her mind to the study of mystic theology, and acquired a morbid conviction of the duty of self-mortification, which she carried to the utmost extreme that her frame was capable of sustaining; at the same time refusing to confess herself to the priests, and declaring that she was guided by the immediate Spirit of God, vouchsafed in answer to her prayers and sufferings. In 1653, when the death of her parents had placed her in possession of a handsome property, she undertook the care of a female orphan asylum, which led, through a series of the strangest circumstances on record, to her arrest on a charge of witchcraft, of which, however, she was acquitted. Wisely avoiding any further entanglement in affairs of this nature, she now busied herself in the diffusion of her principles through the press, and it may here be remarked, that she wrote with great facility in the French, Dutch, and German languages. The opposition of the authorities exposed her to continual vexation and insult, so that her life now, as in childhood, was one of perpetual trial; and still more aggravated by the fatal gift of a preternatural genius which no one knew how to compassionate or control. In her case, as in many others of a similar nature, we have to lament a nobly endowed mind sacrificed in a just revolt against a priest-made religion, for want of the guidance which only the Word of God, accepted in sincerity of heart, and consulted with the utmost simplicity of purpose, can afford. Her principal works are a treatise on 'The Blindness of Man, and Light Born in Darkness,' 'The New Heaven,' 'The Renewal of the Evangelic Spirit,' a 'Treatise on Solid Virtue,' and the 'Truth Discovered.' The substance of all her writings has been formed into a system by the celebrated Poiret, in his work entitled 'Economie de la Nature,' contained in 21 vols. 8vo. She died at Franeker, East Friesland, after passing the last years of her life in ministering to the poor. [E.R.]

 BOYLE, ROBERT, brother of Roger, and son of Richard, earl of Cork, a very distinguished Inquirer of the 17th century; born at Lismore in Ireland in 1626, the year of Lord Bacon's death; died in London in 1691. Boyle was an able and sedulous Investigator of Nature by *Experiment*; and he contributed much to many branches of Physics, Optics, Pneumatics, Natural History, Chemistry, and Medicine;—Pneumatics probably gaining most from his researches. He was one of the foremost of those illustrious men who founded the Royal Society in 1645, for the purpose of improving experimental knowledge, on the plan laid down by Bacon. Boyle's mind was essentially reverential, and he wrote largely on religious topics. He founded a Lectureship at Oxford, which has produced a number of valuable works on the being and attributes of God. [J.P.N.]

BRAHE, P., Comte De, a disting. Swede, tutor of Christina, and fndr. of many universities, d. 1680.

BRAHE, TYCHO, a celebrated astronomer, was born on the 14th December, 1546, at Knudstorp in Scania, and was the eldest son and the second child of a family of five sons and five daughters. Having been adopted by his uncle, George Brahe, and placed under his care, he commenced the study of Latin in his seventh year; and in opposition to the wishes of his father, who had destined him for the military profession, he prosecuted his scholastic studies for five years under private teachers. About three years after his father's death in 1559, he went to the university of Copenhagen, with the view of preparing himself for the profession of the law by the study of rhetoric and philosophy. He had spent little more than a year at college when a great eclipse of the sun, on the 21st August, 1560, excited general interest, and made Tycho an astronomer. Surprised at the close agreement between the calculated and observed phenomena, he resolved to study a science which, in addition to its power of predicting future events, was, in general opinion, connected with the destinies of man. While he was indulging this new passion by the study of *Stadius's 'Tabulæ Bergenses,'* he was sent from Copenhagen, in February, 1562, under the charge of a tutor, to study jurisprudence at Leipzig. There he devoted all his leisure hours to the study of astronomy, making calculations, constructing instruments, and carrying on astronomical observations.—In May, 1565, he left Leipzig to take possession of the estate of his uncle, to which he had succeeded; but in consequence of the opposition made by his parents to his astronomical studies, he quitted Denmark in order to pay a visit to some of the more interesting cities in Germany. From Wittenberg, which he reached in 1566, he went to Rostock, where in a duel with a countryman of his own, he lost his nose, which he very ingeniously replaced by one of gold and silver. Here he remained till 1569, when he visited Augsburg, where he made the acquaintance of John and Paul Hainzel, two distinguished citizens and ardent lovers of astronomy. Paul Hainzel constructed for him, at his own expense, a magnificent quadrant, which exhibited single minutes on its graduated limb, and with which Tycho made many valuable observations during his stay at Augsburg. On his return to Denmark in 1571, Tycho found that his reputation had preceded him. The king invited him to court, and his maternal uncle, Steno Bille, gave him, at the convent of Herritzvold, where he resided, apartments for an observatory and a laboratory. Tycho, most unfortunately, conceived a passion for alchemy, and indulged in the hope of converting the baser metals into gold. He was roused, however, from this dream by the appearance of the *new star* in Cassiopeia, which continued visible from November, 1572, till its disappearance in March, 1574.—After marrying a peasant girl in 1573, and delivering, at the king's request, a course of lectures on astronomy, he visited Hesseland, Frankfort, Basle, and Venice, and returned in 1575 to Ratisbon to witness the coronation of the emperor Rudolph. Tycho's reputation in foreign countries had now begun to excite notice in his own. Frederick II. sent messengers to invite him to his capital, and

Tycho willingly obeyed the royal summons. The king received him with the most flattering attention, gave him a grant for life of the island of Huen, and offered to erect at his own expense all the buildings and instruments that were necessary for carrying on his astronomical and chemical studies. The celebrated observatory of Uraniburg, or the *city of the heavens*, was founded in August, 1576, and supplied with instruments; and within its walls Tycho carried on those observations with which his name is inseparably connected.—Upon the death of Frederick II., and the accession of Christian III., the prospects of Tycho were greatly changed. Although a temporary glory was thrown around himself and his children by a visit from James VI. of Scotland, and other princes, yet his studies were unwillingly tolerated by the Danish court. The nobles grudged him his pension and the magnificent establishment at Uraniburg. The physicians envied his popularity as a medical practitioner, and with such influential enemies, Walchendorff the president, had no difficulty in indulging his own personal dislike to Tycho by measures of injustice and persecution.—Resolved to abandon forever his ungrateful country, Tycho, with all his apparatus of instruments and books, his wife, five sons and four daughters, along with his pupil assistants, and servants, male and female, embarked at Copenhagen to seek the hospitality of a better country. After landing at Rostock in 1579, he went by invitation to the castle of Wandesburg near Hamburg, the seat of Count Rantzau, where his family remained till he was munificently established at Prague, the capital of the emperor Rudolph. This distinguished sovereign gave him the castle of Benach as a residence, with a pension of 3,000 crowns. There he was visited in 1600 by Kepler, for whom he obtained the appointment of imperial mathematician to the emperor, on the condition of assisting Tycho in his observations. Tycho did not long enjoy the liberality of Rudolph. The persecutions and sufferings to which he had been exposed, had preyed upon his mind, and disturbed its tranquillity. An exile from his beloved country, and a stranger in foreign land, his studies lost their power over his mind, and under the influence probably of a painful disease with which he was affected, a temporary delirium overshadowed some of his latest hours. From this painful condition, however, he recovered and resigned himself with true piety into the hands of his Maker on the 24th October, 1601, in the fifty-fifth year of his age. The instruments Tycho were purchased from his heirs by the emperor Rudolph for 22,000 crowns. They were set up in the house of Curtius, and were regarded with such veneration, that not even Kepler was allowed to examine or make use of them. They remained in the same place till the death of the emperor in 1619, when they were carried off, or destroyed, during the troubles which agitated Bohemia.—The island of Huen was, in Tycho's lifetime, sold to a Danish nobleman. The buildings were all demolished, excepting the farm-house, which belonged to Tycho. His dwelling-house and his observatory are marked by two pits and a mound of earth which enclosed the garden. A very full account of his life and labours of Tycho will be found in David Brewster's 'Martyrs of Science.' [D.]

BRAMANTE, DONATO, or BRAMANTE LAZZARI, one of the great Italian architects of the Renaissance, was born near Castel Durante, in the duchy of Urbino, in 1444. He followed in the great path of Brunelleschi, who died almost within a year from the time that Bramante was born. He was originally a painter, and studied the works of Fra Bartolomeo, of Urbino, but first distinguished himself as an architect at the court of Ludovico il Moro, at Milan. Bramante remained chiefly in Milan until 1499; he was employed on the cathedral, and on the repairs of the Basilica of Sant' Ambrogio; and was much engaged in neighbouring cities. In 1500 he settled in Rome; here he took advantage of the opportunities afforded by the ancient ruins of perfecting his knowledge of classical art, and qualified himself for the high position as an architect which he eventually attained. His works, however, are more properly termed Italian than classic, as he accommodated the classic features to the wants of modern society. The Cancelleria Apostolica at Rome, built as the private residence of the cardinal Riario, in 1495, is a fine example, and at the same time is one of the best specimens of the architecture of the Renaissance. The Vatican, however, was the arena of the greatest glories of Bramante; here he carried out vast works for Julius II.; he first joined the Belvedere villa to the old palace of the Vatican, and enlarged and embellished this by the addition of the Court of San Damaso, and the famous Loggia containing the celebrated arabesques of Raphael, with many other improvements. In 1506 he commenced his great work, the rebuilding of St. Peter's. Julius II. laid the first stone on the 18th of April of that year: but Bramante did not live to execute much more than the four great piers which support the dome, which, however, became the key to the whole. Bramante died in 1514; and the great work was carried on by Raphael, aided by Giuliano da San Gallo, and Fra Giocondo, till 1518, and after Raphael's death, in 1520, Baldassare Peruzzi was appointed architect, and continued the work until 1536. Peruzzi was succeeded by Antonio da San Gallo, the nephew of Giuliano, who considerably altered the plan. After the death of Antonio, in 1546, Michelangelo Buonarroti prosecuted the work and completed the dome. After the death of Michelangelo, in 1564, the work was carried on by Vignola, and Pirro Ligorio, under the condition that they were to adhere to the plan of Michelangelo. Ligorio was removed by Pius V. for wishing to infringe this condition. At the death of Vignola, in 1573, Giacomo della Porta assumed the direction, who with Domenico Fontana at length completed the cupola, and fixed the cross, during the short pontificate of Gregory XIV., in 1590. After the death of Della Porta in 1604, the work was carried on by Carlo Maderno, and Giovanni Fontana; and the greatest and most magnificent of Christian churches was eventually consecrated by pope Urban VIII., in the year 1626, one hundred and twenty years after the laying of the first stone by Julius II.—(Vasari, *Vite dei Pittori*, &c.; Platner and Bunsen, *Beschreibung der Stadt Rom*.) BRINDLEY, JAMES, the man who first devoted himself to *civil engineering* as a profession. In Great Britain engineering works were not intrusted to civilians till about the middle of the 18th century, when capitalists began to embark their wealth in speculations that promised a pecuniary return only, without regard to their own neighbourhood being the scene of the projected improvement, or facilities being afforded by it to their peculiar business. The change was the forerunner of increased national means, and by the enlarged field of employment it opened up, gave rise to this new order of professional men,—pioneers of civilization. Brindley was born in 1716, at Thorsett, near Chapel-le-frith in Derbyshire. He followed the usual labours of agriculture until his seventeenth year, without the advantages of even the most ordinary education. But he was a genius—

‘Of mother wit, and wise without the schools.’

He was apprenticed to a millwright, who left him often to work out what the master himself should have designed and directed. Thus his inventive faculties were brought into exercise, and he frequently astonished his employer by the ingenious improvements which he effected, and by the results of his zeal for his master's honour. When his apprenticeship ended he engaged in business on his own account. In 1752 he erected machinery for draining coal pits at Clifton, in Lancashire. The water wheel was 30 feet under ground, and the water was supplied from the Irwell, by a tunnel 600 yards long. This was a work of boldness and ingenuity a century ago, though we may smile at it now! In 1756 he erected a *steam engine* at New-castle-under-Lyne, which was calculated to effect a great saving in fuel over the ordinary Newcomen engine. About 1757 Brindley was consulted by

[Aqueduct over the Irwell.]

the duke of Bridgewater as to the practicability of constructing a canal from Worsley to Manchester. Brindley's success in this undertaking was the means of awakening public attention to the advantages of canals. Had a man of inferior genius, or less dauntless courage, undertaken the works, it might probably have turned out a failure, and the development of our inland navigation might have been deferred some years longer. When the canal

was completed as far as Barton, where the Irwell is navigable for large vessels, Brindley proposed to carry it over that river by an aqueduct 39 feet above the surface of the river! This project was ridiculed by the *practical* men of the day. On much respected individual of the time would not discount the duke of Bridgewater's bill for £500,000 and when the dimensions of the canal aqueduct were communicated to him, he exclaimed:—‘I have often heard of castles in the air, but never was before shown where any of them was to be erected.’ The duke raised the money, however, and in less than one year Brindley completed the aqueduct! Within forty-two years after the duke of Bridgewater's canal was opened, application had been made to parliament for 165 acts for making canals in Great Britain at an expense of £13,000,000. Brindley engineered the great undertakings which opened an internal water communication between the Thames, the Humber, the Severn, and the Mersey, and united the great ports of London, Liverpool, Bristol, and Hull, by canals which passed through the richest and most industrial districts of England. Brindley died 1772, at the age of fifty-six, the victim of intense application to an arduous and exciting profession. He was interred at New Chapel, in Staffordshire. Brindley is reported to have answered a Committee of the House of Commons, when asked for what objects rivers were created:—‘To feed navigable canals. Railway engineers of the present day conceive they are turning rivers to their primitive destination for canals are being converted into railways. Brindley could neither read nor write until late in life, and then but poorly. He had great powers of mental calculation, was of unwearied application an industry, and eminently successful. BRISOT, PETER, a medical an., 1478-1522.

BRISOT, JEAN PIERRE, distinguished in the history of the revolution as leader of the Girondins, was an orator and political writer of the first ability. The commencement of his public career as a journalist was characterized by a singular stroke of vanity, whereby the plebeian appellative of the humble pastry-cook who begot him, was metamorphosed into the name of his birth-place and shone with aristocratic refulgence as ‘De la Vallée.’ In the obscurity of his early life he seems to have acquired all the experience of men at things necessary to a political intriguer. Restless, scheming, and ambitious, he was indefatigable in his zeal for reform, especially for the amelioration of the criminal code and the abolition of slavery. It is difficult to say whether his character was spoiled, or rather made, by the philosophy of Rousseau. Madame Roland, when it became his fate to meet him, was certainly disappointed in his appearance, for she saw no passion in his countenance corresponding to that of his style and was rather struck by the busy mobility of novice than the dignity of an apostle in his conduct.

ersation and manners. When the revolution first dawned he was the advocate of a constitutional monarchy; grewed at by Marat for 'giving his law to Lafayette,' and again as bitterly denounced, especially by Robespierre, for his imprudence in lazying forth the word 'Republic' when his conceptions were changed. While the states-general were discussing the constitution, Brissot associated himself with Condorcet and Clavière as joint proprietors of the *Moniteur*, and in 1791 was returned to the first parliament. His love of occupation, his activity as a senator, as a member of the Jacobin Club, and in the coterie at Madame Roland's—perhaps also his extreme shiftiness in argument—soon marked him out as the head of the middle class republicans, first distinguished by his own name, and called 'Brissoins' by the spirited Camille Desmoulins. His hour of triumph was under the ministry of Roland and Clavière, with whom he, of course, fell at the period of Marat's insurrection, 2d June, 1793, when his name appeared first of the twenty-two Girondins ordered under arrest. He endeavoured to escape disguised as a merchant travelling to Neuchâtel, but was discovered *en route* by the Revolutionary Committee of Moulins, and finally placed with his colleagues, 'all chief republicans,' 'the eloquent, the young, the beautiful, the brave,' at the bar of Fouquier Tinville. Brissot defended himself with the courage of a patriot and the serenity of a philosopher, and though it was not him, but his friend Danton who addressed the tribunal in an epigram, 'I exactly express the feeling of the whole party, We die on the day when the people have lost their reason, ye will die when they recover it!' The philosophical repast in prison, and the chorus of the Marseillaise at the scaffold on the following morning, 31st October, have been often described, and it was at the former that Brissot emphatically said, in answer to the question whether he believed in the immortality of the soul and the providence of God—'I do believe in them; and it is because I believe in them that I am about to die.' His history is that of his party, a well-intentioned and talented body of men, but too scrupulous of forms, too philosophical and studious of theory as legislators, and in a word, hardly audacious enough for the exigencies of the period. He left behind him many works of importance, but especially on criminal jurisprudence. The chief of these are 'Théorie des lois Criminelles,' 2 vols. 8vo, 1780, and 'Bibliothèque Philosophique du Législateur, du Politique, du Jurisconsulte; sur les lois Criminelles,' 10 vols. 8vo, 1786. As to personal appearance, he was a man of small stature, with thin pale features, lighted up by intelligence, and ennobled in circumstances of danger by intrepid determination. His dress and habits had been formed to the Quaker model during his residence in America, where he had taken refuge from the terrors of a 'lettre de cachet,' before the outbreak of the revolution. BROWN, THOMAS, a recent Scottish metaphysician; successor of Dugald Stewart in the university of Edinburgh. Born near Edinburgh in 1778, he died at an early age in 1820. His tastes were literary; and he relished philosophical discussion. When only eighteen years of age he published a refutation of Darwin's *Zoonomia*; the first edition of his *Essay on Cause and Effect* appeared in 1804, on occasion of a singular but unprofitable and ill-managed controversy that had arisen within the Scottish Church: he afterwards issued a fragment entitled *Outlines of the Physiology of the Human Mind*: but his principal work consists of *Lectures*, of which multitudes of editions have been sold in Great Britain and America. Brown likewise paid offerings to the Muses: his poems were collected into four volumes, but they are already forgotten. The metaphysical system—if so it may be called—to which the writings of this philosopher gave currency, is certainly no continuation of what is termed the Scottish School, but rather an effort at revolt, alike against its leaders and doctrines. In the first place, he makes an elaborate attempt to create an impression that the supposed merits of Dr. Reid in refutation of the *Ideal Theory*, are reducible to his successful demolition of a fallacy held by no important metaphysical writer, (excepting perhaps Berkeley and Malebranche)—a pure cre-

ation of Reid's own fancy. On this historical point we shall remark at length under the article *Reid*; suffice it to state here, that Brown has completely failed, and shows besides an ignorance of the true merits of the question, quite remarkable in a man of undeniably quick apprehension. The subject of Sensation disposed of, he next attacks the account given by his predecessor of our mental *faculties*—a word to the use of which he strongly objects; producing instead of the careful description of phenomena occupying the volumes of Reid and Stewart, an artificial classification of specious simplicity, but throwing no real light either on the nature of the more important psychological facts, or their relations. Mental phenomena, he conceives, should be divided into *external* and *internal States* of the thinking principle,—the former being our sensations, the latter the contents of the *Intelligence*. Internal states, he considers, are either the reproduction of ideas of absent objects, by means of what he calls *simple suggestion*, or the perception of their relations, through *relative suggestion*. Adding our *Emotions*, classed into *immediate*, *retrospective*, and *prospective*, Brown conceives he has described and explained all mental phenomena.—It were easy to show that in most of his attempts to simplify, Brown has mistaken and contorted the great facts of psychology; his fatal error, however, is this—an error which may be inferred from the mere phraseology of his system,—he confounds the *will* with merely passive *desire*, from which it had been a prime aim of his predecessors clearly to distinguish it. The *will*, he says, is simply *desire*, coupled with the belief that the object of the desire will follow as an effect. That great faculty, the coequal of Sensibility and Intelligence, the source and condition of human liberty and dignity, is thus purely and simply suppressed; nor was it possible for Brown to evade consequences which ever belong to that suppression;—his philosophy is on the edge of those two abysses, scepticism and fatalism. It is in nowise a favourable symptom either of the taste or acuteness of the time; that these *Lectures* have obtained a currency so wide. If their metaphysics are bad, their style, considered as a philosophical one, is certainly the reverse of commendable. Diffuse and inaccurate, it is wearisome and misleading. Ambitiously rhetorical, its metaphors and digressions, often pleasing by themselves, distract the attention of the student from the *thought*. Brown himself seemed to imagine that a philosophy might be *improvised*: and it is to be feared that his example and writings have done much, to maintain the youth of our time in the delusion, that acquaintance with the Science of Mind may be promoted, and truth discerned, through glib use of the mere forms of philosophical thought. There is no use in such popular philosophy. If an aspect of dialectic is demanded of public instructors now, the time will come, when, to obtain acceptance, they must exercise reflection also. BRUCE, ROBERT, king of Scots, was born in the year 1274. It is unusual to call monarchs by their family name, but Bruce has generally been made an exception, as he rather gained his kingdom by his services than acquired it by hereditary succession. After the death of Margaret of Norway, daughter of Alexander III., there were several competitors for the Scottish throne, chiefly among those adventurous Norman knights who were laterally connected with the Scottish royal family. Among these was a Robert of Bruce—supposed to be a corruption of Bruix, his ancestral domain in Normandy—whose claim was that he was the son of Isabel, second daughter of David earl of Huntingdon, the brother of King William the Lion. On hereditary principle, as we now understand there was, however, a preferable claimant in John Balliol, who was grandson of the eldest daughter of the earl of Huntingdon, and there were many other claimants. The advantage which the English king took of this confusion, and his attempts to subjugate Scotland, are well-known chapters of British history. Had he been less tyrannical, the Scots might have submitted to his sway, but brought in high Norman notions of prerogative and feudal exactions, to which the Scots were unaccustomed. Exasperated and prepared to fight themselves, they offered a good opportunity to a daring and ambitious man who could put forth title to head them as their king. Robert, grandson of that Bruce who had been one of the original claimants, after attending the court of Edward, and for some time hesitating, was at length partly by accident, driven to take up his position as the kingly leader of the Scots. He had been concealing with Cumyn, who had similar claims, a plan for one or other of them starting for the crown, and receiving the assistance of the other who should be largely rewarded with the private estates of both. Cumyn revealed the project, and Bruce, secretly warned, escaped from the English court to Scotland. Unconscious that his treachery was known, Cumyn met the fugitive in the Church of the Franciscans in Dumfries. Hot words passed, and Bruce in his fury stabbing him, he was dispatched by an attendant. The deed of sacrilegious violence, while it occasioned Bruce's excommunication by the pope, drove him in desperation to raise the banner of Scottish nationality. Finding an enemy not only in the English invader, but in the Celtic potentate the lord of Lorn, his cause seemed hopeless. But oppression increased the number of his followers, and at last he gained such substantial success, that Edward resolved to go again to Scotland to crush him. He died on the way, and with his strong hand was removed the Scots rallied larger numbers round the liberator, and put him at the head of a considerable army. Edward I. attempting to restore the English power by leading into Scotland a vast army of the flower of the English chivalry, only brought them to destruction at the field of Bannockburn. This conclusion

battle was fought on the 14th of June, 1314. Its history shows that Bruce was a consummate general according to the tactic of the day. His principle of warfare was what has always proved the best for a poor nation; not to ape cavalry, but to trust in highly trained foot soldiers well placed. His frame was injured by the hardships of his early struggles, and he died on 7th June, 1329. [J.H.B.]

BRUCE, JAMES, F.R.S., the celebrated explorer of Africa, was born on the 14th of December, 1730, at Kinnaird, an estate and mansion near Larbert, in Stirlingshire, which had been in the possession of the family for about 400 years. In 1590, Sir Alexander Bruce, of Airth, made over the lands of Kinnaird to his second son, Robert, a minister of Edinburgh. This Robert Bruce, who was distinguished in the times of the Reformation, had two grandchildren, Robert and Alexander: the former died of his wounds after the battle of Worcester, without issue; the latter, ill requited for his services in the royal cause, died in 1711, leaving two daughters, of whom the eldest, married to David Hay, of Woodcock-dale, Mid-Lothian, was heiress of Kinnaird, and left the property to her eldest son, David, he assuming the name and arms of Bruce. David Hay Bruce was the traveller's father. The Hays of Woodcock-dale were a branch of one of the oldest families in the three kingdoms. There is no foundation for the statement that the family of Bruce is descended from King Robert:—that line was itself a branch, and became extinct on the death of David II., 1371. All the families who have any records, are descended from the youngest of three sons of the fourth Lord Annandale, lineally sprung from Robert de Bruis, who came over from Normandy with William the Conqueror. The name was variously spelt, Brus, Bruis, Bruise, Bruix, and afterwards Bruce.—The subject of this notice was educated in London, Harrow-on-the-hill, and the university of Edinburgh. Obligated to abandon his studies for the profession of advocate on account of his health, he went to London in 1753, in order to make arrangements for settling in India in the way of trade. He here changed his plans, and marrying a Miss Allan, daughter of a rich wine merchant, deceased, he became partner in that business. His amiable wife died within a year, leaving him in the deepest grief. Rallying, however, he set himself vigorously to several studies, which proved of the greatest use afterwards, and had meanwhile the effect of changing the current of his thoughts. In 1757, he went on a lengthened tour to the continent, combining pleasure with business connected with the firm. His father's death the year following, hastened his return. Though he now succeeded to the property, and though his income from it began to improve considerably from the year 1760—owing to the establishment of the Carron iron works—no change took place in his designs. He was, in fact, in daily expectation of an appointment from government. He had made some suggestions about a descent on the Spanish coast, which brought him under the notice of Mr. Pitt and Lord Halifax; and from the latter, in 1762, he received the appointment of consul at Algiers, with the understanding that it was to be temporary, and was to facilitate plans of discovery, which had been discussed between Lord Halifax and himself. Promises

of assistance in carrying out these were made only to be broken; and on his being superseded, in 1765, he left Algiers, and having visited many parts of North Africa, and Western Asia, he reached Alexandria on the 20th June, 1768, and entered, at his own cost, upon that long and perilous journey to discover the sources of the Nile, for which he is famous. The head waters reached by him are now known not to have been those of the principal stream, but of an important branch of the great river, whose sources, though never yet reached, are ascertained to lie close upon the equator, 800 miles south of the point reached by Bruce. His singular adventures going and returning, and during his residence in Abyssinia of two years, are detailed at length in his *Travels*. He reached Cairo, on his return, on 10th Jan., 1773; but remaining in France and Italy for the restoration of his health, he did not arrive in London till June 1774, having been absent twelve years. Returning to Scotland, he was actively engaged for some time in improving his property. He married, May 20, 1776, Mary, daughter of Thos. Dundas of Fingask and lady Janet, daughter of Charles, sixth earl Lauderdale, by whom he had two sons and one daughter. Mrs. Bruce died in 1784. It was not till 1790 that his *Travels* appeared—in 5 vols. 4to. They excited universal interest, and were translated into French and German. Many of his most startling statements, which caused his veracity to be seriously called in question, have been since amply confirmed—among others, that of the horrid practice of devouring flesh cut quivering from the body of a living cow! On the evening of April 26, 1794, when handing a lady down stairs to her carriage, he fell headlong, and was taken up insensible, but without apparent hurt. He expired next morning—in the sixty-fourth year of his age. He was succeeded by his second son, the eldest having died an infant. His daughter married John Jardine, Esq., advocate, of Edinburgh. His remains were interred in the family vault at Larbert.—Mr. Bruce was tall of stature, being six feet four inches in height, his person was large and well-proportioned, and he had a commanding air. He was extremely expert in the use of fire-arms, and of the javelin and lance—no small recommendation among the rude tribes with whom he sojourned. [J.B.]

BRUCE, JOHN, a moral philosopher, 1744-1826.

BRUCE, MICHAEL, one of the minor Scotch poets, was born at Kinnesswood in the county of Kinross, 27th March, 1746, and died of consumption in the twenty-first year of his age, 6th July, 1767. His parents were in poor circumstances, his father being a weaver; but the merit belongs to them of improving the genius which they early discovered in poor Michael by a liberal education, with the view of qualifying him for the ministry. They even sent him to the university of Edinburgh for three or four years from 1762, where he made great progress in his classical and philosophical studies; but the graces of poetry and the *Belles Lettres* were his chosen pursuit, in which the pensive melancholy to which men of genius are so frequently subject, and the gifts of his imagination, could be more freely indulged. There is little to record of his innocent uneventful life. In 1765-6 he was teacher of a school at Gairney Bridge, near

Kinross, and felt the heart-sickness of a disappointed attachment for the daughter of the people with whom he lodged, and who was a pupil of his. Several of his poems have perpetuated the memory of this circumstance, and the best of them is his 'Alexis, a Pastoral,' in which the refinement of the scholar is elegantly blended with the poetical sense of the muse, and the plaintive eloquence of the lover. In 1766 he removed to a school near Alloa, where he composed his 'Lochleven,' a descriptive poem in blank verse, in which he has gratefully remembered the virtues of his tried friends Arnot and Henderson. All this time his health was gradually sinking, and the fatigues of the village school, no longer relieved and hallowed to his heart by the evening instruction of his 'Eumelia,' were more than he could endure. In the winter of this year he abandoned whatever expectation he may have formed in the great business of life, and returned to his parents, that the loving hearts which had watched him with so much solicitude in the morning of his days might hush him to rest in their early evening. His last words are a celebration of the return of Spring:—

'————— but not to me returns
The vernal joy my better years have known;
Dim in my breast life's dying taper burns,
And all the joys of life with health are down.'

The pathos and melody of many passages in this elegy with the 'Alexis' already alluded to, and his farewell to Lochleven, in imitation of 'Lochaber nae Mair,' fairly represent the natural talent of Bruce for poetry. In personal character he was remarkable for ingenuousness and modesty, and, as a matter of course in a poet, for a feeling heart and a lively imagination. Living a few short years, consumed by hard study and anxiety, his poems are few in number. They were published in a volume, with some others added to make a miscellany, but without any means of distinguishing the authors, soon after his death, by his friend and fellow-poet the Rev. John Logan, and at a later period, properly discriminated, in the collection of Dr. Anderson. [E.R.]

BRUNEL, MARC ISAMBARD, a civil engineer of great fame, a consummate mechanical genius, a man of rare singleness of mind and kindly disposition. He was born at Haqueville in Normandy, in 1769—the year that produced so many notabilities. He began an education for the church

at the seminary of St. Nicaise, at Rouen. His genius had a different bent, however, and he so distinguished himself in mathematics and physical science, that the superior of the establishment recommended his adopting another profession. He entered the royal navy of France—constructed a *quadrant* for himself—made several voyages, and returned home in 1792, during the reign of terror. Being a royalist, he emigrated to the United States, where necessity became the mother of his wonderfully fertile invention. He surveyed for canals, planned sawing mills, erected boring mills for the ordnance, was architect of the first theatre in New York (since burned down); and while in America conceived the blockmaking machinery, the success of which should alone give him a conspicuous place in the annals of industrial mechanism. With the block machinery on paper he came to Britain in the year 1800. Lord Spencer, then first lord of the admiralty, became his friend and patron. From this time Brunel continued to reside in England, and refused to entertain propositions made to him to settle abroad, under the auspices of other governments. After much delay, he was employed to make a set of block machinery for Portsmouth Dockyard. With happy discrimination Brunel selected the late Henry Maudslay as the maker of the machines, and thus was laid the foundation of one of the most extensive and perfect engineering establishments in the kingdom. The machines were made *exactly after Brunel's models*. They have been for forty-seven years at work, and no change or improvement in any of them has since been made or suggested. This is a type of all Brunel's work. His plans and drawings were kept to himself till so elaborated that they really contained the essence of all that could be done in simplifying the means to accomplish the end in view. His circular saw for cutting veneers, the machine for winding cotton balls, as inventions in pure mechanism—and the Chatham Dockyard and the Thames Tunnel, amongst works of civil engineering, may be cited in illustration. The first steam-boat that ran on the Thames, and the first double acting steam engine used for propelling steam vessels, were erected under his instructions in 1816.—The history of the Thames Tunnel is too recent and familiar to require that we should repeat it here. Despite its failure, commercially speaking, Brunel continued to look upon it as his greatest achievement, and devoted the latter years of his valuable life in completing it. It is undoubtedly a great and marvellous triumph of skill, and only those who know the extraordinary variety of engineering resources which it called into play, can sufficiently appreciate the talents of the engineer who planned them and superintended their execution. Brunel died in 1849, in his eighty-first year. His son carries his father's fame in full vitality to another generation. Brunel was knighted in 1842. He was V.P.R.S., and corresponding member of the Institute of France. [L.D.B.G.]

BRUNELLESCHI, FILIPPO, one of the earliest and most celebrated Italian architects of the Revival, was born at Florence, in 1377. He was brought up a goldsmith, but devoted himself equally to sculpture and architecture. He paid, also, early attention to perspective, and instructed Masaccio in this science. Brunelleschi joined the competi-

tion, in 1401, for the bronze gates of the Baptistery of St. John, at Florence; but both he and his celebrated contemporary, Donatello, admitted that they were surpassed by Ghiberti, who gained the commission, though then a mere youth; the centre gates were not fixed up until half a century after the competition, 1452.—Brunelleschi visited Rome, where the Pantheon seems to have made a great impression on him, and to have determined him to undertake his great work, the dome of Santa Maria del Fiore, or cathedral of Florence, which had been left unfinished by Arnolfo di Lapo. He returned to Rome in 1417, and made a model of the dome, but without convincing his contemporaries of the practicability of his scheme, until after the great congress of architects at Florence, in 1420, who then looked upon him as mad. At length, however, in 1423, he was appointed sole architect of the cathedral, Lorenzo Ghiberti being at first joined with him; and though he did not live long enough to see his great work quite completed, it was sufficiently advanced to secure its completion by his successors. This dome is the largest in the world constructed of masonry, it being some feet wider than that of St. Peter's at Rome. The angular interior diameter is 78 Tuscan ells, nearly 150 English feet.—Brunelleschi executed many other great works in Florence, and elsewhere; in Florence, are worthy of mention, the magnificent Pitti Palace, the residence of the grand dukes of Tuscany, and the church of San Lorenzo. He died in 1446, and was buried with great pomp in the cathedral.—(Vasari, *Vite dei Pittori*, &c.; Moreni, *Vite del Brunellesco*, &c. 1812; Fantozzi, *Guida di Firenze*.) [R.N.W.]

BRUNO, GIORDANO, a remarkable Italian Inquirer of the 16th century, whose very daring and original speculations derive fresh interest from his fate—he was burnt as an Atheist by the Inquisition at Rome, on 17th February, 1600.

Wearied of shackles inseparable from his first position as a Dominican priest, Bruno fled to Geneva in 1580, where he lived two years. The rigour, the despotism, and intolerance of Calvin, did not, however, suit him; and finding no adequate compensation in the intellectual power, logical acuteness, or vehement courage of that great Reformer, he departed for Lyons, Toulon, and Paris. For some years, indeed, Bruno was a wanderer over Europe; he lived in London at the close of 1583; but led by an unhappy fatality, or through effect of that home-sickness which is part of the moral being of every Italian, he wearied of free and safe lands, and returned to teach in Padua. The Inquisition arrested him, and retained him in prison for two years—vainly attempting to reduce him to recantation. On 9th of February he was degraded, excommunicated, and delivered to the secular magistrate, after the usual disgusting formula—'*That he be dealt with as mercifully as possible, and punished without effusion of blood.*' Bruno exclaimed,—'Your sentence strikes more terror into your own hearts than into mine;' and he died as a brave man ought.—It is far from wonderful that Bruno called down ecclesiastical fury on his head. His writings consist for the most part of keen and scarcely-concealed satire on the Romish Church and priesthood: nor was his philosophy less unacceptable, for, revolting against the despotism of that Aristotle of the middle ages, he took refuge with Plato and the School of Alexandria. His errors lay not in the direction of Atheism, but in that of Pantheism: so far from bringing down the absolute and ever-living Cause towards things or forms finite, he rather inclined to diminish the importance of the created or external universe; nor is it precisely easy to see, in what way he provided for, or saved human liberty and responsibility in his really devout and imposing scheme. We shall characterize his peculiar phase of the doctrine of the 'absolute' under the article *Spinoza*. Bruno wrote very largely. His Italian writings were collected and published at Leipzig in 2 vols. 8vo, in 1830. A very interesting account has recently been given of his life and general philosophy by the French writer *Bartholomess*. [J.P.N.]

[Lucius Junius Brutus.]

BRUTUS, the surname of a Roman family, several members of which appear in history. 1. **LUCIUS JUNIUS BRUTUS**, was the son of Marcus Junius, and of Tarquinia, sister of Tarquinius Superbus (Tarquin the Proud,) the last king of Rome. When still young he lost his father and elder brother by the cruelty of Tarquin; and he himself escaped a similar fate by feigning idiocy; which perhaps gave origin to the surname Brutus or Dullard. The violence offered by Sextus, the son of Tarquin, to Lucretia, the wife of Collatinus, called forth the true character of Brutus. Being a witness along with her husband and father to her injured virtue, he drew from her bosom the knife with which she vindicated her innocence, and bound himself by the most solemn oath to visit the crime of Sextus upon Tarquin and all his accursed race, and to suffer no man thereafter to be king in Rome. The populace were easily excited, and these being readily joined by the army, Tarquin and his family were banished from Rome, B.C. 510. In the following year Brutus and Collatinus, the husband of Lucretia, were elected as the first consuls, and headed the army against the attempts which were made to restore the banished family. When leading the cavalry against Porsenna, who had espoused the cause of the Tarquins, Brutus engaged in single combat with Aruns, the son of the exiled king, and both fell, pierced by each other's spears. 2. **DECIMUS JUNIUS BRUTUS**, served under Cæsar in Gaul; and, on the breaking out of the civil war, B.C. 49, actively exerted himself in promoting his interests. He afterwards obtained the command of Further Gaul, and performed services so important, that Cæsar promised him the government of Cisalpine Gaul, with the prætorship for B.C. 44, and the consulship for B.C. 42. Being thus in possession of the entire confidence of Cæsar, his co-operation was of great value to the other conspirators; and he was accordingly sent by them to conduct their victim to the senate house on the day of the assassination. The motives which induced Brutus to join the conspiracy against his friend and benefactor, are not known. After the death of Cæsar, B.C. 44, he went to his province of Cisalpine Gaul, from which he was expelled in the following year by Antony, to whom the same province had been assigned by the people. He now resolved to cross over into

Macedonia to Marcus Brutus, but his soldiers deserted him on the march; and he was betrayed by Camillus, a Gaulish chief, and put to death by order of Antony. 3. **MARCUS JUNIUS BRUTUS**, son of M. Junius Brutus, by Servilia, sister of Cato of Utica, was born B.C. 85. When the civil war broke out between Cæsar and Pompey, B.C. 49, Brutus, contrary to expectation, joined the party of the latter, and fought under his banners at the battle of Pharsalia, B.C. 48. Having thus incurred the displeasure of the predominant party, he solicited and obtained the pardon of the conqueror, who restored him to his confidence, and generously allowed him to spend his time in his favourite literary pursuits. In B.C. 46 he was made governor of Cisalpine Gaul; and in B.C. 44 obtained the office of city prætor; thus not only acquiescing in the usurpation of Cæsar, but accepting favours and offices from the dictator. The change of mind which at this time took place was effected through the influence of Caius Cassius, by whom he was persuaded to join the assassins on the Ides of March. Failing to enlist the people on the side of the conspirators, he retired to Athens, where receiving a large sum of money, he collected the scattered troops of Pompey, and proceeded to take possession of Macedonia, the province which Cæsar had assigned to him. After making himself master of Greece and Macedonia, he went to Asia and joined Cassius, whose efforts in raising an army had been equally successful. Brutus and Cassius now returned to Macedonia, and met Augustus and Antony on the plains of Philippi, B.C. 42. In the first engagement the army of Augustus gave way before that of Brutus, while Cassius was defeated by Antony. But in a second battle, fought about twenty days later, Brutus was defeated, and fell upon his own sword. [G.F.]

BRUYERE, JEAN DE LA, a native of Normandy, was born in 1644. After having been royal treasurer at Caen, he was appointed, on the recommendation of Bossuet, to give instruction in history to the duke of Burgundy, the grandson of Louis XIV. He remained attached to the court, and died in 1696. In regard to the details of his life very little has been recorded; but a prudent and unobtrusive reserve seems to have accompanied those habits of keen observation, on which mainly his literary fame was built. His 'Characters,' published in 1687, but much augmented in following editions, placed him immediately in the highest rank as a master of French style; and they still entitle him to be named with Rochefoucault and Montaigne, among those writers whom the French regard as most thoroughly acquainted with human nature. The work is unlike the 'Characters' of Theophrastus, (a translation of which was prefixed to it,) in substituting minutely drawn portraits, full of individuality, for outlines of characteristics common to large classes of men; and from those sketches of a similar kind which had been so frequently produced in England during the first half of the 17th century, it differs not only in the variety and particularity of its scenes and figures, but also in the prominence it gives to general maxims, and to reflections prompted by them. It abounds, to an extraordinary degree, both in striking thoughts expressed with epigrammatic force and concise-

ness, and in fragmentary sketches of men and manners, which suggest to every one parallels encountered in actual experience. The attempts which were eagerly made (and which are embodied in a key usually attached to the book) to identify the personages described, proved at once the Parisian love of scandal, and the general conviction that the writer had drawn faithfully from the life. La Bruyère's view of human nature is severe, but less bitterly so than that of Rochefoucault; and he excels in a delicate and philosophical irony, which he applies with especial dexterity in half-hinting his real opinions on questions about which he dissented from his contemporaries and countrymen. BUCER, MARTIN, was born in 1491 at Schelestadt in Alsace. His early life was spent among the Dominicans, who sent him to Heidelberg to pursue his education, and there he had a dispute with Luther on free-will. In 1521 he became a convert to the Reformation. At Strasburg he was both a pastor and teacher of theology for many years. At the diet of Augsburg he incurred such suspicion and danger by opposing the 'Interim,' that he welcomed an invitation from Cramer to come and reside in England. He taught theology at Cambridge with no little acceptance, and died there in February, 1550. Under the intolerant and fanatical reign of Mary, his ashes were dug up and burnt. His works are numerous, and some of his commentaries are still held in repute. Cardinal Contarini said of him,—"That he was able to contend alone with all the doctors of the Romish church." [J.E.]

BUCHANAN, DR. CLAUDIUS, was a native of Cambuslang, in the neighbourhood of Glasgow, where he was born, 12th March, 1766. His father, who was parish teacher of that place, and a very pious man, brought him, both by his precepts and example, under the early influence of religion; and the character and pursuits of his future life took their direction, in all probability, from the impressions received under the parental roof. The family having removed to Inverary, young Buchanan received his education at the grammar school of that town, of which his father had become master; and having made great proficiency in his knowledge of Latin and Greek, he obtained, while yet under fourteen, the appointment of tutor to the sons of Mr. Campbell of Dunstaffnage. During the two years that he continued in that office, he exhibited a prudence and practical knowledge above his years; and what is more, he advanced in piety and strict habits of devotion, in which he engaged daily in a

lonely spot on the sea shore. Repairing in 1787 to London, he there acquired the friendship of the good John Newton, under whose ministry he sat; and having, after a ripened intimacy, communicated to that venerable counsellor his earnest wish to be employed in preaching the gospel abroad, he was introduced to the notice of an eminent Christian philanthropist, Mr. John Thornton, who delighted to spend his fortune in advancing the cause of Christ. That gentleman, having satisfied himself as to the character and principles of the young Scotchman, resolved to undertake the expense of giving him a university education, and accordingly Buchanan was in 1791 admitted into Queen's College, Cambridge. After a very distinguished career at the university, Buchanan was in 1795 ordained by Bishop Porteus, and in the March following sailed for India as a chaplain in the East India Company's service. In that character he was destined to render important services to the cause of Christ; and indeed the name of Claudius Buchanan stands foremost in the history of the propagation of the gospel in India. Amid much opposition he continued his evangelical labours; and having been appointed by the marquis of Wellesley, Vice-Provost of the College of Fort-William in Bengal, he issued in 1804 the first translation ever made of the gospels in Persian and Hindostanee. In 1806 he published proposals for a subscription to aid in translating the Scriptures in fifteen Oriental languages; and through his zealous exertions the British and Foreign Bible Society, the universities of Oxford, Cambridge, and Glasgow, were induced to aid in that important undertaking. To qualify himself by more familiar acquaintance with its dialects, he devoted a year to travel through the Indian continent. On Lord Minto's appointment to the gov.-generalship in 1807, Mr. Buchanan, who considered the course of administration pursued unfavourable to the interests of religion, published his celebrated 'Memoir of the Expediency of an Ecclesiastical Establishment in British India.' Compelled through declining health to abandon the field of his arduous labours, he left India and arrived in England in the month of August, 1808, and after having visited his friends in Scotland, he returned to England, where he preached, and afterwards published 'The Star in the East,' and 'Christian Researches in Asia,' an interesting and eloquent appeal on behalf of missions. He finally settled as incumbent of the parish of Onseburn, Yorkshire, where he died of a paralytic shock on 9th February, 1815. [R.J.]

BUCHANAN, GEORGE, the celebrated Latin poet and historian of Scotland, was born of an old but respectable family in the parish of Killearn, Stirlingshire, February, 1506, and having lost his father when young, was educated by his maternal uncle, James Heriot. He had been at the university of Paris about two years when the latter also died, and Buchanan was reduced to such indigence that he enlisted as a common soldier in the duke of Albany's army, but at the conclusion of the war he was enabled to resume his studies, and took a master's degree in 1528. Between this period and 1539-41 he was employed under various circumstances as a classical teacher, and was residing with the earl of Cassilis in Ayrshire, when his unlucky wit, and the Lutheran principles he had

imbibed, led to his imprisonment for some satirical verses written against the Franciscans. He was fortunate enough to escape from St. Andrew's castle, and finding his way beyond seas, lived some twenty years in exile, undergoing much persecution, even to confinement in the prisons of the Inquisition, yet always recovering himself and living by his professional avocations. About the year 1562 he is known to have been residing in Scotland again, and had the good fortune a few years later to be intrusted with the education of the young prince, (James VI.,) whom he made 'a pedant' because, as he said, 'he could make nothing better of him.' Whether at home or abroad, his literary industry never flagged, and few men have received more uniform praise from the learned, who seem to have vied with each other in celebrating the graces of his style, especially in his beautiful paraphrase of the Psalms, composed in the imprisonment of a monastery, and his Scotch history; at the same time that he is generally blamed as an historian, for writing of things as he was casually informed, and especially for his severe expressions against the unhappy Mary Stuart. The examples of royalty with which he had made acquaintance were hardly calculated to impress him with much reverence for the institution, and his work 'De Jure Regni apud Scotos,' was really a vindication of the democratic control of princes. Sir John Scot, in his short description of Buchanan, quaintly observes:—'He was in so great disgust with the court before he died, that they caused summon him before them sitting in council, for some passages of his history too plain of the king's mother and grandmother; and he had undoubtedly run a great hazard of his life if the Lord had not freed him of the miseries of this world betwixt the citation and the day of comparison.' His life was thus curiously saved on the 28th September, 1581, and as he left no property, he was buried at the expense of the city of Edinburgh. [E.R.]

BUFFON, GEORGE LOUIS LE CLERC, Comte De, an eminent naturalist, was born at Montbard, in Burgundy, in 1707. He died in 1788. Buffon was educated at the college of Dijon. When nineteen years old he travelled through Italy, and it is most probably owing to his having inspected in person the effects of the convulsions of nature, and the proofs of ancient revolutions of the globe in that country, that we are indebted for the works which have immortalized his name. In 1739 he was appointed superintendent of the Garden of Plants; and from that time he devoted his whole life to the study of natural history. He was assiduous in his attention to the duties of his office; and under his excellent management the garden, and museum of natural history attached to it, became the first in Europe. For ten years he devoted himself to his grand work, his Natural History, the first volume of which appeared in 1749, the remaining following at short intervals. The object of this work is to give a general theory of the globe which we inhabit, the disposition, the nature, and origin of the substances which it offers to our view, the grand phenomena which operate at its surface or in its bosom; the history of man, and the laws which preside at his formation, in his development, during his life, and at his death; the nomenclature and the description of quadrupeds and birds, the examination of their faculties, and the delineation of their manners. This work is written with great elegance of style; and his eloquent descriptions, the brilliancy of imagination which pervades them, and the correct taste he exhibited in arranging his subjects, soon made it the most popular book of the kind ever written. An extraordinary impulse was given by Buffon to the study of natural history in his own country; and he has the great merit besides of having spread a love for the study of nature far and wide. The solid anatomical portion contributed to the history of the quadrupeds by Daubenton, added much to its value amongst scientific men; and many of the best works in natural history, that have been written in France since his death, have been published under the name of *Suites à Buffon*. For more than forty years he presided over the church in Zurich with singular prudence and success. BUNYAN, JOHN, the celebrated author of the 'Pilgrim's Progress,' was born in 1628 at Elstow, in Bedfordshire. His father, though a travelling tinker, had taught him to read and write; but seduced by evil example, he plunged into every species of vice, and acquired the character of a notorious and hardened profligate. He became a soldier in the service of the parliament, and was at the siege of Leicester, where having been drawn on one occasion to act as sentinel, he narrowly escaped the fate of his comrade, who was shot by a musket ball from the royalist camp. Many other remarkable deliverances are recorded in his early history, clearly showing that Providence, who threw over him the shield of Divine protection, had some important work in reserve for him. Overhearing the conversation of four pious women, who were talking to each other of the necessity and blessedness of a religious life, and the hopeless misery of the wicked, his conscience was struck; he began to think seriously, and his dissolute companions perceiving a sudden alteration in his conduct, which all their raillery could not affect, gradually abandoned his society. As for Bunyan, he put himself in private communication with Gifford, a dissenting minister in Bedford, whose chapel he attended, and being persuaded that baptism by immersion was the only Scriptural mode of receiving the ordinance, he was in that manner received, in 1653, into the communion of the church. Conceiving himself called to proclaim the gospel, he perambulated the country as an itinerant preacher. After the restoration, this course of life brought him within the grasp of the law, which prohibited conventicles, and as he could not desist from a duty to which he imagined himself specially called, he was condemned to perpetual banishment. This severe sentence was not carried into execution; but he was confined in Bedford jail for the long period of twelve years and a-half. In that place he supported himself and family by tagging laces, and although cut off by his protracted confinement from all opportunity of public preaching, he was, in the overruling providence of God, more extensively useful than while in the enjoyment of unfettered liberty; for having during his leisure hours exerted the extraordinary talents with which he was endowed, he produced the 'Pilgrim's Progress,' a work which has been more extensively circulated, and done more good in the world than any other book, except the Bible alone. Bunyan being at last released through the kind intercession of Dr. Barlow, bishop

BUR

of London, he was chosen pastor of the baptist church in Bedford. Wherever he went, he was attended by crowded audiences, amongst whom were sometimes found persons of high eminence both in the church and state. He died in London, 1688, in the sixtieth year of his age, and was buried in Bunhill cemetery. His other works, 'The Holy War,' and 'Grace Abounding to the Chief of Sinners,' are pieces of great merit, though their fame is eclipsed by his unrivalled allegory. [R.J.]

BURCKHARDT, JOHN LUDWIG, was born at Lausanne, in Switzerland, in the year 1784, or

1785. He studied at Basle, Leipzig, and Göttingen, graduating at the latter. Introduced by Blumenbach, in 1806, to Sir Joseph Banks and the African Association, he was engaged to travel under their auspices in central Africa: and having carefully prepared himself by various studies, he received his instructions in January, 1809. These bore that he was to remain two years in Syria, perfecting himself in the Arabic, thence to proceed to Mourzouk, in Fezzan, from which he was to cross the desert to Soudan, and the sources of the Niger. While in Syria, he visited most places of interest. In 1812 he reached Cairo, and being repeatedly disappointed in finding a caravan to convey him to Mourzouk, he performed various journeys in Egypt, Nubia, Abyssinia, on the shores of the Red Sea, and through Arabia, collecting a great amount of most important information. When, at length, in the autumn of 1817, the long expected caravan was ready to depart, Burckhardt was seized with dysentery, and expired at Cairo, October 15, 1817, in the thirty-third year of his age. His last days were cheered by the kind attentions of Mr. Salt, the English consul; and his death caused lively regret in Europe. His *Travels* occupy 4 vols. 4to, published at different times between 1819 and 1830. [J.B.]

BURDETT, SIR FRANCIS, an eminent popular and parliamentary leader, was born on 25th January, 1770. The younger son of a younger son, it was only after a series of unexpected and calamitous deaths that he succeeded to the title and estates of his ancient and affluent family. Before that event he had in 1793 married a daughter of Thomas Coutts, the banker. He began his eventful parliamentary career by advocating an exposure of abuses in the Coldbath Fields, and other prisons. It was from the popularity thus achieved that in 1802 he was started for Middlesex. After a hot contest of fifteen days he was returned, but the House found the election void, and imprisoned the sheriffs. The contest was still carried on by him in vain at enormous expense. In 1807, when disabled by a wound in a duel, he was started on the memorable contest for Westminster. His friends were successful, and he sat nearly thirty years for that constituency. The main incident in his subsequent career is that in a quarrel with the House of Commons, he attempted to resist the Speaker's warrant for his arrest, and created a disturbance, in which lives were lost. On this occasion the serjeant at arms found him affected by teaching his child magna charta. It was always suspected that his politics were founded more on love of popularity than conviction, and he proved this by capriciously changing them in 1835, and vehemently adopting the other side. When professing democracy he was a thorough aristocrat in personal feeling. His appearance was handsome and commanding, and with his dress and deportment made him the picture of a high bred English gentleman of the old school. He died on 23d January, 1844. [J.H.B.]

Though a painter of great excellence in his time and style, he is better known for his series of woodcuts, chiefly illustrating the achievements and life of the emperor Maximilian; as 'Der Weiss Kunig,' (the wise king), an account of the acts of the emperor Maximilian I., with 237 large cuts, published with the life by Treitzsauerwein, at Vienna, in 1775; and the triumphal procession of the same emperor in 135 large cuts folio, executed in 1519; 'Le Triomphe de l'Empereur Maximilien I.,' accompanied with the ancient description dictated by the emperor himself to his secretary Marc Treitzsaurwein, Vienna, 1796. There is a third curious book of the 'Saints' of the imperial family, also by Burgkmair.—The above works, especially the 'Weiss Kunig,' are very valuable for the great variety and accuracy in detail of the illustrations of the manners and customs of the commencement of the sixteenth century. The blocks of these cuts, and many others by Burgkmair, are still preserved in the imperial library of Vienna. They are only partly executed by Burgkmair, he was aided by Albrecht Dürer, and several other of the principal artists of his time: it is supposed that he actually cut very few of the blocks. The date of his death is uncertain, it is fixed by some authorities as late as 1559. [R.N.W.]

BURKE, EDMUND, a celebrated orator, statesman, and philosopher, was born at Dublin on 1st January, 1730. It has been much questioned whether he was from the beginning what is termed a political adventurer without means of livelihood to keep him independent, or entered on life with a considerable fortune. His family was said to be high and ancient, but his enemies, who were many and bitter, treated this as a common national boast of all Irishmen, and spoke of Burke as a sort of barbarian, who had come from a wild tribe to fight his way on in civilized life by the fierce unscrupulous habits in which he had been brought up. His early education, however, was derived in the calm seclusion of a Quaker seminary at Ballitore in Kildare, where he probably acquired much of the solemn reflective character which tempered his natural ardour. He studied, but not with any known distinction, at Trinity College, Dublin, where he took his master's degree in 1751. He was destined for the bar, and entered the Middle Temple, but legal studies seem to have had no charm for him. His abilities must have been seen in 1752, for it is known that there was then a proposal to choose him professor of logic in the university of Glasgow, though he does not appear to have been, as David Hume was, an avowed candidate. His first literary work, called 'A Vindication of Natural Society'—a close imitation of Bolingbroke, was published in 1756. Immediately afterwards appeared his well-known essay on the Sublime and Beautiful. Its originality of thought, and luxuriant flow of words and

ideas, at once arrested attention; and whatever may be thought of the leading principles, so well ridiculed by Payne Knight, and others, the literary merits of the work entitled it to its high reputation. In 1757 he published his account of the settlements in America, and shortly afterwards co-operated with Dodsley in the 'Annual Register.' In 1763 his ability as a political partizan obtained for him a pension of £300 a-year on the Irish establishment, and the event was rendered remarkable by the indignation with which Burke repelled the claims which the gentleman known 'as single speech Hamilton,' made on his political allegiance, on the plea of having obtained for him this pension. He entered political life, for which he had been industriously training himself, by becoming private secretary to the marquis of Rockingham, when first lord of the treasury in 1765, and at the same time entering parliament as representative of Wendover. At the conclusion of this ministry, he commenced that long opposition to its successors which became memorable from the tone of philosophical and constitutional wisdom with which he pleaded what, after all, was in reality the restoration of his own party connections to power. On the re-establishment of the Rockingham administration in 1783, he was made paymaster-general. His subsequent career is entwined with the history of the period. Its main features are his share in the prosecution of Warren Hastings, and that stern denunciation of the revolutionary progress of France, which caused his dramatic quarrel with Fox and his other old political friends. He made a large contribution to the parliamentary oratory of his day, and his speeches were remarkable for their richness of language and abundance of imagery. He died on July 8, 1797. [J.H.B.]

[Tomb of Burke.]

BURLEIGH, WILLIAM CECIL, Lord, an eminent English statesman, was born in 1520. His father was master of the robes, and thus naturally opened a court career to the capacities of the son. He married in 1541 a sister of Sir John Cheke, who soon dying, after she had given birth to the son who became earl of Exeter, he was united in 1546 to Mildred, daughter of Sir Anthony Cook, the director of the royal

studies. He was appointed master of requests by the Protector Somerset. He was at first involved with the fall of his master, but not expressing any romantic fidelity to him, speedily rose again, and was made secretary of state. His sagacity and caution prevented him from committing himself to the claims of Lady Jane Grey. Though thus commended to Queen Mary, it was neither consistent with his principles nor his caution to aid her efforts for the re-establishment of the power of Rome, and he kept himself apart, offering a modified opposition to the court. He was in the meantime in close communication with the Princess Elizabeth, helped her to evade the dangers surrounding her, and prepared her to occupy the throne. On the day of her accession he took that place as her principal adviser, which he retained while he lived. In 1571 he was raised by the queen, always sparing of her honours, to the rank of baron. The history of his administration is the history of England. He was essentially a statesman of wise management rather than of constitutional views. Taking the immediate results of his policy, no statesman was ever more successful, but looking at ultimate effects, it may be said that he did more than any other man to bring England near to a despotism, and thus to lay the foundation of the civil wars of the ensuing century. It was his principle to make himself acquainted with the individual histories of men, and to dive as nearly as possible to the bottom of their character and intentions. Thus among his characteristic studies was genealogy, and he kept up such a potent system of secret inquiry as Britain never knew before, and has not known since. One of the most unpopular and unjustifiable of his acts was the death of Mary Queen of Scots. He was affected to the extent of a lively apprehension by the massacre of St. Bartholomew, and thought it inconsistent with the safety of England and the protestant cause, that the captive queen should continue to live. He was in general, however, moderate and averse to severity. He lived a moral, domestic life, characterized by the grave deportment of the age. He was neither malignant nor greedy, and left behind him a high name for integrity. He died on the 4th of August, 1598. [J.H.B.]

His first music master was Mr. Baker, organist at Chester; he received further instructions from James Burney, his elder half-brother, organist at Shrewsbury, and he was three years under the tuition of Dr. Arne. In 1749 he

was appointed organist of a church in London, which year he was introduced to Mrs. Cibber, through whom, besides making the personal acquaintance of the literary and scientific men, the artists, actors, and wits of the time, he was induced to compose for Drury Lane Theatre three musical dramas, 'Alfred,' 'Robin Hood,' and 'Queen Mab.' After this period, being in ill health, he went to Lynn Regis in Norfolk, where for nine years he occupied himself in collecting materials for his great 'History of Music,' at the same time filling the situation of organist, with a salary of £100 per annum. In 1760, recovered in health, he returned to London, where he soon procured full employment and gained a high reputation in his profession, and where his eldest daughter, then only eight years old, attracted much attention as a performer on the harpsichord. In 1766 he brought out at Drury Lane a translation of Rousseau's 'Devin du Village.' In 1769 the college of Oxford conferred upon him the honorary degree of Doctor in Music. In the following year he set out on his travels with the object of visiting the great continental libraries, that he might add to the stores of matter he had collected for his 'History of Music.' In 1771 he published his 'Musical Tour,' a work of which his friend Dr. Johnson said when he wrote his account of the Hebrides, 'I had that clever dog Dr. Burney's tour in my eye.' In 1776 the first volume of the 'History of Music' was published, the second appeared in 1782, and the third and fourth in 1789. In this year Edmund Burke procured him the situation of organist at Chelsea College. In 1796 he published his life of Metastasio. He also contributed the principal articles on music to Rees's Encyclopedia. His other literary works were 'An Essay towards a History of Comets,' 'A Plan of a Public Musical School,' 'An Account (written for the Philosophical Transactions) of little Crotch, the Infant Musician,' 'A Memoir of the Musical Festival in Honour of Handel, which was held in Westminster Abbey in 1785.' In the year 1806 Mr. Wyndham procured for him a pension from government of £300, from which period he gave up his intellectual labours. He died on the 15th of April, 1815. Dr. Burney was twice married, and left by his first wife two sons and four daughters, and by his second one daughter. His eldest daughter, already mentioned, was celebrated as a musician. His second daughter, Madame D'Arblay, is known from her novels, 'Cecilia,' 'Evelina,' 'Camilla,' and the 'Wanderer,' which works commenced a new era in light literature. His eldest son, JAMES, sailed round the world with Captain Cook, and afterwards commanded the Bristol, fifty guns, in the East Indies. His second son was the learned CHARLES BURNEY, LL.D. Dr. Burney was on terms of intimacy and friendship with all the eminent men of his day. In all the relations of life, his character is described as exemplary, while his manners were peculiarly easy, spirited, and gentlemanly. [J.M.]

BURNS, ROBERT, the great peasant-poet of Scotland, lived and died within the latter half of the eighteenth century. His father, William Burness, according to the original spelling of the name, was a native of Kincardineshire, whence he migrated, first to Edinburgh, and afterwards to Ayrshire, obtaining employment as he best could as working gardener. He ultimately took a lease of seven acres of land, about a couple of miles from the town of Ayr, in the district of Kyle, where he built, by the roadside, with his own hands, a clay cottage, which is still standing, an object of interest to strangers. To this humble dwelling, consisting merely of a *but* and a *ben*, he brought in due time, a young bride, named Agnes Brown, daughter of a small farmer in the neighbouring district of Carrick, and the first fruit of this union was Robert, born on the 25th of January, 1759. The position of William Burness at that time, and indeed throughout his whole life, was that of a high-minded and noble-hearted man struggling with adversity. Nevertheless, he contrived to give his children a respectable education, Robert, and his next brother, Gilbert, having been placed under an excellent teacher, named Murdoch. In 1766, when the poet was seven years old, his father removed with his family to Mount Oliphant, a farm a couple of miles distant, but for some time afterwards the boys continued to attend Murdoch's school. If the library at Mount Oliphant was small, it yet comprised several good books, including the 'Spectator,' Allan Ramsay's 'Poems,' some plays of Shakspeare, and above all, a Collection of English Songs, which Burns acknowledges to have studied with critical care. In his fifteenth year Robert was the principal labourer on the farm, which was far from prosperous; and to the drudgery and affliction which he endured at this period, his brother Gilbert ascribed that depression of spirits, accompanied at times with an irregular motion of the heart, to which he was afterwards liable. From the miseries of Mount Oliphant, the Burns family fled in 1777 to the farm of Lochlea, in the parish of Tarbolton. In the midst, however, of every hardship, the young men continued to advance not only in learning, but in accomplishments. Robert, with the assistance of his old teacher, Murdoch, had so far mastered the French language as to be able to read it with ease. At Kirkoswald he likewise acquired a smattering of mensuration and land surveying; while at Tarbolton he cultivated his powers of oratory in a debating club. Before this time he had fallen in love with 'a bonnie, sweet, sonsie lass,' with whom he had worked at harvest, and his feelings had vented themselves in verse of no very noticeable merit. Not long, however, after the indifferent song of 'Handsome Nell,' he produced the inimitable lyric of 'My Nannie, O.' In the hope, according to his brother Gilbert, of being able to marry, he became a flax-dresser at Irvine; but at this occupation he continued only six months, during which time he was initiated into the mysteries of freemasonry, and acquired some additional knowledge of the world, together, it must be confessed, with some little laxity of morals. His return to Lochlea was a return to a

quiet and correct mode of life. About this time a visitor described the Burns family at meal-time as having 'books in one hand and spoons in the other.' Inspired by a volume in his possession of letters from the pens of the best English authors, the poet aimed at epistolary excellence, and kept copies of such of his own communications to his friends as pleased him. In 1784, William Burness, 'the priest-like father' of the 'Cottar's Saturday Night,' died, leaving his family involved in a ruinous litigation. With what little they could rescue from the wreck at Lochlea, Robert and Gilbert Burns entered upon the farm of Moss-giel, in the parish of Mauchline. The former, in his new and responsible position, determined to read agricultural books, calculate crops, and attend markets. In place, however, of becoming a good practical farmer, he became only a great poet! It was at Moss-giel that he produced his most masterly pieces, including 'The Cottar's Saturday Night,' 'Address to the Deil,' 'The Jolly Beggars,' 'Halloween,' 'To a Mouse,' 'The Holy Fair,' 'Man was made to Mourn,' and others on which his fame chiefly rests. His powerful satires on the 'Unco Guid,' including the merciless and somewhat profane verses entitled 'Holy Willie's Prayer,' together with some transgressions against the laws of morality, stirred up many enemies, particularly among the 'Old Light' clergy. On the other hand, his genial, not to say convivial disposition, manly independence of character, and brilliant poetical parts, gained him a host of friends, and his first volume, printed at Kilmarnock in 1786, was largely subscribed for, and yielded him a clear profit of £20. With this money it was his intention to proceed to a situation in Jamaica, as book-keeper on the estate of a Dr. Douglas, in order to escape from the consequences of an intrigue with Jean Armour, the daughter of a master-mason in Mauchline, who ultimately, however, became his wife. With his attachment to 'bonnie Jean,' was mixed up a romantic affection for a Highland girl, named Mary Campbell, the subject of some of his most beautiful and high-toned effusions. The extraordinary favour, however, with which his poems were received by the critical world, induced him to proceed in 1788 to Edinburgh, with the view of getting out a second edition. His reception in the Scottish capital was of the most dazzling kind. In the society of the earl of Glencairn, Lord Monboddo, Mr. Henry Erskine, Dr. Robertson, Dr. Blair, Dr. Adam Ferguson, Dr. Blacklock, Mr. Henry Mackenzie, Mr. Fraser Tytler, and other celebrities, he was exhibited as a 'lion,' and the force, originality, and brilliancy of his conversation seem to have produced even a greater impression than his poetry. Admired and marvelled at by eminent men, Burns exerted a still more wonderful fascination over beautiful women. Among the latter was Mrs. Jas. M'Lehose, a wronged and deserted wife, about his own age, with whom he entered into a singularly romantic and imprudent correspondence, under the Arcadian names of Sylvander and Clarinda. His second edition was at length published by Mr. Creech, and realized for the poet a profit of £500, the list of subscribers having extended to thirty-eight pages. This was the culminating point in the

career of Burns. Out of the funds of which he was now in possession, he lent his brother Gilbert, who was still struggling with the unfortunate farm of Moss-giel, the sum of £180. With the rest he took various tours through Scotland, a professed 'rustic bard' and man of genius, writing diaries and letters, scratching impromptu verses on the windows of inns and taverns, and inditing passionate love-strains to ladies and damsels of every degree, with whom he had the slightest possible acquaintance. After three months' rapturous raving to Clarinda, together with sundry other episodic attachments, he formally installed Jean Armour as his wife; and having leased from Mr. Millar of Dalswinton the farm of Ellisland, on the banks of the Nith, between five and six miles from Dumfries, he once more turned his attention to agricultural pursuits; but in reality chiefly occupied himself with railing at fortune, and writing the most exquisite songs in the world. In August, 1789, he entered the excise with a view to eke out his insufficient income. His duties, however, which compelled him to ride some two hundred miles in the course of every week, interfered with the business of his farm, and in 1791 he abandoned the latter, and established his head-quarters wholly in Dumfries as an exciseman. The emoluments of his office did not exceed £70 a-year. Although poor, however, and often pinched for money, he was never in absolute want; and it is remarkable, that although contributing assiduously, first to Johnson's 'Scots Musical Museum,' and afterwards to Mr. Geo. Thomson's 'Melodies of Scotland,' he always seemed to resent any offer of remuneration as an affront. The written, collected, or altered songs contributed by Burns to these two miscellanies amounted to 284 in number. At Dumfries Burns lived about five years, leading a somewhat irregular life, occasionally getting into trouble on account of his capricious temper, or his democratic sentiments, resenting fancied slights by pungent epigrams, but still retaining many warm friends, and penning lyrics which were destined to live for ever. Broken at length in health, owing, it is said, to his having slept all night on one occasion in the open air, this extraordinary man expired at his house in Dumfries, on the 21st of July, 1796, in the thirty-eighth year of his age. Immediately after his death all Scotland was touched with remorse at having suffered her greatest son to perish in poverty and neglect. Subscriptions to a large amount were raised for behoof of his widow and family; costly monuments were erected in various quarters to his memory; and ever since, his fame has continued to increase. Although fond of representing himself as 'unlettered,' and as bred 'at the plough-tail,' it may be doubted whether there was anything either in the position, or in the training of Burns, unfavourable to the full development of his genius. His brightest effusions were born of his toils, aspirations, and sufferings. In several other respects, the humbleness of his station in life was an advantage. It heightened the surprise occasioned by his writings, and procured for him an amount of substantial patronage which has been too much overlooked. That his career was prematurely cut short must always be a matter of regret to those

who remember that 'Tam o' Shanter,' 'Bruce's Address,' and the celebrated parting song of 'Ae Fond Kiss,' were among his later productions; but in his poetry and in his life, which are inseparably associated, he has left a sufficiently splendid impression. The moral failings which he himself acknowledged and deplored, are more easily forgiven than defended. Even, however, if there is something to condemn in his character, there is much more to admire and honour. His poverty never betrayed him into any mean or sordid action, or lowered the manly integrity and sturdy independence of his character. In literature his place is among the great ones of the earth. Much of his prose composition is laboured and inflated; and his letters to Clarinda, in particular, present a strange and incongruous mixture of friendship and folly, religion and wild passion. But his poetry is replete with fire, humour, and pathos, combined with perfect simplicity and naturalness. One main secret of his success was his almost always writing directly from nature. His Jeans, Marys, and Peggies, were creatures of veritable flesh and blood. He even seemed to be continually working himself into fits of love, for the mere purpose of finding subjects for his muse; while his intense admiration of natural scenery, in place of venting itself in cold description, was generally associated with some engrossing human emotion. Hence it is that he rarely fails to find his way to the hearts of his readers, and that he has succeeded in bequeathing to his country and the world, the most admirable body of lyrical composition, whether as regards force of expression or tenderness of sentiment, to be found in the literature of any age or nation. His poem was published after the restoration, the first two parts in 1663 and 1664, the third in 1678, and its popularity from the first was unprecedented. Two collections of the author's posthumous poems have appeared in 1719 and 1759, respectively, but his reputation rests exclusively on the 'Hudibras,' which, for its pungent wit, ludicrous casuistry, and droll humour in the description of life and character, is unparalleled in the language.

BUTTON, SIR THOMAS, was employed in 1612 by the merchants of London to prosecute the discoveries of Henry Hudson on the N.E. coast of North America. He was the first who reached the east coast through Hudson's Strait. With his two ships, Resolution and Discovery, he passed the winter at the mouth of Nelson's River, west side of Hudson's Bay, lat. 57° 10', and showed extraordinary sagacity and tact in keeping up the health and spirits of his crews. In the following summer he made some important discoveries northwards, and returned home in the autumn of 1613, but was not again employed. He was first patronised by Prince Henry, son of James I., and received the honour of knighthood as a reward for his services. [J.B.]

BYRON, JOHN, second son of William, Lord Byron, was born November 8, 1723. He went out with Anson, as midshipman on board the *Vager*, and was wrecked on the west coast of South America, about lat. 47°. An Indian Canoe conveyed him and his companions, after thirteen months' dreadful sufferings, to the island of Chiloe. Thence they made their way northwards, being treated by the Spaniards with the utmost kindness, though the nations were at war, chiefly in consequence of the fame which had spread abroad regarding Anson's lofty chivalrous behaviour towards some Spanish ladies whom he had made prisoners. 'Byron's Narrative' of the sufferings and adventures of himself and his companions, published in 1745, after he returned home, is one of the most interesting accounts of nautical adventures ever given to the world. Being constantly employed afterwards, as well in war as in peace, he performed many brilliant services, of which the most worthy of mention is the destruction of a French squadron in Chaleur Bay. In command of two ships he made a voyage to the South Sea in 1764. In 1769 he was made governor of Newfoundland. In 1778 he commanded a fleet in the West Indies, and soon after rose to the rank of Vice-admiral of the White. He is better known, however, by the humbler title of commodore. He had a family of two sons and seven daughters, by Sarah, daughter of John Trevanion, Esq. of Cartrays, Cornwall, whom he married in 1748. Byron died in London, April 30, 1786, enjoying to the last a well-earned reputation. Captain Byron, one of his sons, was father of the poet, who thus oddly alludes to his ancestor's misfortunes in describing those of one of his heroes:—

—his sufferings were comparative
To those related in my grand-dad's narrative.' [J.B.]

BYRON, GEORGE GORDON, Lord, was the descendant, and became the head of an ancient and noble family. Commodore Byron, the celebrated voyager, was his grandfather; and his father, Captain Byron, a profligate and extravagant man, married Miss Gordon, an Aberdeenshire lady of old descent. The poet was born in London, on the 22d of January, 1788. Two years afterwards, his father having fled from his creditors to the continent, where he soon died, Mrs. Byron Gordon sought at Aberdeen a residence suited to her scanty resources, which seem to have been in no way aided by the then Lord Byron, her husband's uncle, a retired and despondent man. In the course of the eight years spent in Scotland, she, a violent and misjudging woman, acted as if it had been her aim to weaken all the good tendencies in her son's fine nature, and to aggravate all the bad ones. Capricious alternations of severity and indulgence cherished his hereditary hastiness of temper, and pampered his proud wilfulness into selfish defiance; a constant change of teachers, and of methods of teaching, cherished habits of desultoriness and inattention in the boy's studies.

Byron was already a spoiled child, when, about the commencement of his eleventh year, his grandfather's death made him the possessor of the family title and property.—His mother, left by the guardians to take her own way, now spoiled him more than ever; while at the same time she subjected him to fruitless and tormenting operations, designed to remove the lameness which, caused at his birth, she had taunted him with from childhood in her fits of anger. Improvement, both in temper and in industry, began on his being placed in an excellent private school at Dulwich; but the promising prospect was destroyed by his mother's constant interferences; and he remained at this place for no more than two years, and these broken by frequent and long visits to home. He was next removed to Harrow, where, though somewhat rebellious, and a very careless student of the Classics, he was liked as a generous and spirited youth, and went through a good deal of miscellaneous reading. During his school days at Harrow, and before he had entered his eighteenth year, he formed an attachment which, though doubtless poetized and magnified in his own imagination afterwards, was probably more genuine and ardent than any he felt in mature life. The lady was Miss Chaworth, two years older than himself, the heiress of estates in the neighbourhood of his

[Newstead Abbey.]

patrimonial mansion of Newstead Abbey in Nottinghamshire, and the near relative of a gentleman who had been killed in a duel by the preceding Lord Byron. He has immortalized her marriage and melancholy fate in 'The Dream' and other poems.—Entered at Trinity College, Cambridge, in the autumn of 1805, he resided for two years. His career at the university was eccentric, profuse, and on the whole idle; but he read zealously when the humour seized him, acquiring a very considerable amount of stray knowledge; and a few persons of talent, with whom he had become intimate, were quite aware that he was a young man of no ordinary promise. While he was still at the university, he circulated privately copies of a thin volume of verses, which was prudently reserved for friendly readers and soon suppressed. But before the end of 1807, and when in his twentieth year, he was rash enough to face the public with the 'Hours of Idleness,' a collection of poems, from the very best of which no one would have ventured to presage

the strength he was soon to exhibit. This strength was brought to a point by the anger which the young poet felt at the famous criticism on his book in the 'Edinburgh Review.' Studying the satirical poets as models, and collecting every available piece of gossip that could point an ill-natured jest, he at length, in 1809, poured forth his wrath, all the warmer for the nursing he had given it, in his poetical satire 'English Bards and Scotch Reviewers.' Scurrilously personal, and indiscriminately contemptuous of all the literary celebrities of the day, this poem showed powers which evidently wanted only maturity and fit guidance to achieve very great things.—In the same year he embarked with Mr. Hobhouse on a two years' journey on the continent, in the course of which he visited the Peninsula, extended his travels to Greece and Turkey, and, with his poetical enthusiasm now fairly awakened, composed in great part the first and second cantos of 'Childe Harold's Pilgrimage.' The publication of these, in the spring of 1812, when he had just completed his twenty-fourth year, made him at once the most popular poet of the time. The few who had already learned to appreciate Wordsworth and Coleridge, found, in the new poet, a freedom both from the affectations of the one and from the obscurities and eccentricity of the other; while there were united with these a poetic elevation and richness not exceeded by either. The popularity, again, which Scott had won, by the 'Lay,' 'Marmion,' and the 'Lady of the Lake,' was already beginning to suffer from the satiety produced by bad imitations; and the Scottish minstrel's favour with the public waned rapidly, when Byron, deserting the meditative poetry of the 'Pilgrimage,' adopted, like Scott, the seductive form of the metrical romance, and gave it the charm of novelty by choosing Turkish and Grecian stories. In 1813 appeared his wildly striking fragment 'The Giaour,' and the more regular 'Bride of Abydos,' 'The Corsair' and its sequel 'Lara,' followed in 1814, and were accompanied by the 'Ode to Napoleon Buonaparte.' In the beginning of 1816, the first and most characteristic series of Lord Byron's works was closed by the appearance of 'The Siege of Corinth' and 'Parisina.'—While he was thus building up his poetical fame, his domestic history underwent several changes, to which he was no way slow in inviting attention. 'Childe Harold,' the sated voluptuary, seeking to refresh his sick heart amidst the magnificence of nature, but contemplating all things through the medium of a cynical and despondent philosophy, had been avowedly presented as an idealized portrait of the young poet himself, bitterly convinced, by a premature experience, of the hollowness of worldly pleasures, yet unable to discover any higher truths, in the contemplation and realization of which happiness might be attained. Till the publication of the earlier cantos of 'Childe Harold,' Byron's proud and sensitive spirit had been tempted to misanthropical discontent by the equivocal position he held in society, partly through accidental circumstances, partly through the reputation of his youthful irregularities. But the stamp thus imparted on his earlier poetry was too much in accordance with his natural temperament to be easily effaced. The exaggerated and theatrical exhibition of his

own character, in the persons of his heroes, was repeated even in those of his tales, which were written while he was the idol of fashionable society and enjoyed the prospect of domestic happiness and when misfortune and opprobrium darkened round him, the petulant rashness of ill-trained youth passed into a permanent mood of morbid and haughty defiance, to which his later poems gave utterance with increasing eagerness and constancy. With as little power as any great poet ever possessed, of observing or delineating the character and passions of other men, Byron was not true to nature, unless when he drew his materials from within but his poetry, thus unreal and fantastic in all representations of human life, has the singular charm which belongs to the self-drawn image of a nobly endowed with the poetic elements of greatness, and vacillating in its moral aspect between the extremes of goodness and of evil.—In the autumn of 1814, after having passed some years in the round of extravagant and unsatisfying dissipation into which he had been initiated even in boyhood, Lord Byron married the daughter of Sir Ralph Milbanke. The marriage proved unhappy: both parties, through causes which have never been clearly explained; pecuniary embarrassments aggravated dissension; and in the beginning of 1816, soon after the birth of a daughter, Lady Byron quitted her husband's house never to return. Very soon afterwards Lord Byron left England, which he never again set foot. His first place of residence was in the neighbourhood of Geneva, where the sublime scenery of Switzerland, and the society of the poet Shelley, co-operated in awakening his mind to an elevation and purity of poetic inspiration such as he never reached before or afterwards. Here were written 'The Prisoner of Chillon,' and the third canto of 'Childe Harold.' The influence of Swiss landscapes lingered fondly in his imagination during the next stage of his travels. It gave birth to 'Manfred,' which, with all its faults, ethical and dramatic, is perhaps richer in poetical imagery and sentiment than any of his other works. In the end of 1816 he took up his abode at Venice, where he remained for three years, visiting Rome and there gathering materials for the fourth canto of 'Childe Harold.' His residence at Venice was disgraced by low and gross debauchery; and, as there was greater refinement, there was no real improvement of morality, in a more lasting attainment which he next formed for the Countess Guiccioli, and which is not recommended to our English feelings or notions, even by the countenance vouchsafed to it by the lady's father and brother. In the beginning of 1820 Byron followed the countess and her family to Ravenna; where, when they became engaged in political plots, which soon caused his Italian friends to be banished from the papal states. Pisa then became the abode of the party. Here Byron received Mr. and Mrs. Shelley, and afterwards Mr. Leigh Hunt, and with these coadjutors attempted unsuccessfully a periodical called 'The Liberal.' His poetical vein, however, flowed freely during his residence in Italy. Besides 'Manfred' and the last canto of 'Childe Harold,' and several works which are universally admitted to be poor, he then produced 'Mazeppa,' 'The Lament of Tasso,' and his Dramatic Poems, of which, while 'Cain' abounded

the old leaven, the tragedies indicated, morally, though not poetically, an inclination to rise into a higher and purer region. Other inclinations, however, were betrayed by a new class of poems, in which the strength and versatility of the poet's genius were strikingly displayed. They were modelled on the burlesque poetry of the Italians, which had hardly been emulated in the English language except by Frere. Byron's first attempt in this path was 'Beppo'; and the ethical looseness of this lively piece became exaggerated into open depravity, while it was accompanied at first by much noble poetry, and always by much stinging wit, in the notorious cantos of 'Don Juan.'—That Byron was secretly weary of aimless profligacy, and eager for opportunities of honourable action, may be inferred from his willingness to take part in the abortive Italian conspiracies. A more promising field was now opened to him, soon after the unfortunate death of his friend Shelley. The London Committee of Philhellenes requested him to take part in the

emancipation of Greece; and he enthusiastically accepted the invitation. He sailed from Genoa in July, 1823, and began his philanthropic exertions in the island of Cephalonia. In January, 1824, he landed at Missolonghi, already labouring under illness, which he had aggravated by bathing in the sea in the course of his last voyage. Disappointments in the great object of his expedition gathered round him, and were bravely borne; but his health was further injured by anxiety, and by repeated exposure to bad weather in an unhealthy climate. He died at Missolonghi, of rheumatic fever, or its accompanying inflammation of the heart, on the 19th of April, 1824, soon after having celebrated, in affecting verses, the completion of his thirty-sixth year. CABANIS, PIERRE JEAN GEORGES, a very celebrated physician and philosopher, belonging to a recent school; much concerned with the events which marked the close of the last and the beginning of the present century in France. He was born in Conac in 1757, and died in Paris in 1808. Cabanis was closely associated with the greatest men of the revolution; it was he who gave Condorcet that fatal dose of *stramonium*, through whose energy he escaped death by the guillotine; Cabanis attended and ministered to Mirabeau during his last illness, and he was the favourite physician of Napoleon. Considerable interest still attaches to the physiological and psychological speculations of Cabanis; whoever desires fullest acquaintance with the best compacted physiological theory of mind, must indeed betake to this author. A thorough disciple of Condillac; starting with it as an axiom that all our ideas are but compositions and transformations of our sensations, (see CONDILLAC and LOCKE,)—he sprang at once to the physiological expression of that theory, viz: that *thought or soul* is the secretion of vital organs—a result or phenomenon of vital structure. 'If,' says he, 'Condillac had known the animal economy better, he would have seen that *soul* is a *faculty*, not an *existence*.' Among the physiological schools prevailing during the times in which he lived, the position of Cabanis is apparently as follows. There are *three* of these schools; the *first* discerns in the animal economy nothing save peculiar *physical* phenomena, evolved by the same laws which rule inorganic sequences;

the *second* admits that independently of physical phenomena, life is a set of special actions, or consists of vital *properties*; the *third*, to which Cabanis belonged, and which he represents, concedes that with material elements, some peculiar vital *principle* has been conjoined. Although this principle did not in the mind of Cabanis have any relation with intelligence or reason, nevertheless the concession—far from insignificant in France at the time—seems gradually to have opened his mind to those more advanced views expressed in his famous letter to M. Faurel, in which he declares at least for the *possibility* of the existence of the moral system governed by this principle, after the dissolution of the organism. The student will find enough to repay perusal in the works of Cabanis. His style is literary, distinct, and strong; and he has thrown much light on the really physiological and physical phenomena of our human nature. A good edition of his collected works has recently appeared in Paris. [J.P.N.]

CABEZA DE VACCA, a Sp. navig., 16th c.

CABOT, SEBASTIAN, was born at Bristol, about the year 1477, but the precise date is uncertain. His father, John Cabot, or Gabotta, was a Venetian, who, in the pursuits of trade which occupied him, had occasion to reside at intervals in England. He seems to have been a man of superior intelligence and information, interested in the progress of discovery by sea, and possessed of considerable wealth. He returned to his native country when Sebastian was four years old, but came again to England while his son was still young,—and hence the belief long prevailed that Sebastian was a native of Venice. Having already, at the age of eighteen or nineteen, acquired the knowledge necessary for a commander, imbued with his father's tastes, and fired by that spirit of enterprise which the discoveries of Columbus were

everywhere exciting, Sebastian projected an expedition across the N. Atlantic, ostensibly, it is said, with the important practical object of discovering a N.W. passage to Cathay, the 'Land of Spice.' Henry VII. gave his countenance to the scheme; and under government auspices an expedition was fitted out, and intrusted by patent, dated 5th March, 1496, to John Cabot, and his three sons, Louis, Sebastian, and Sautius. They were authorized to occupy and possess all lands in the name of the king, who reserved a fifth of the profits; but the right of traffic was to belong to the patentees exclusively. In May, 1497, the expedition sailed from Bristol under command of Sebastian, his father and brothers most probably accompanying him. On the 24th June he reached the coast of Labrador, about lat. 56°, and was thus the first to discover the continental land of the Western world—Columbus, in his third voyage, not having entered the Orinoco till August, 1498. Nothing else is known of this voyage; but it appears that he returned almost immediately to England, and made two other voyages in 1498 and 1499, the latter being to the Gulf of Mexico, but no records of them have been preserved. About this time, John Cabot seems to have died, Louis and Sautius to have settled in Italy; of Sebastian all trace is lost till 1512, when he arrived in Spain, having been sent for by King Ferdinand, who had formed a higher estimate of his genius and merits than had been entertained in his own country. He enjoyed honour and a handsome emolument till the death of Ferdinand in 1516. The enemies of Columbus then became his, and he was obliged by the annoyances which he suffered to return to England. In 1517 Henry VIII. sent him, with Sir Thomas Perte, on a voyage to the N.W., during which he reached lat. 67½°, and entered Hudson's Bay—but no details are known respecting his discoveries. After this voyage he visited Spain, and was reinstated in honour and income by the emperor Charles V. Having visited the banks of the great river, first named by him the La Plata, in command of an expedition intended for the Moluccas, and performed several other voyages, he came again to England in 1548; and soon after was granted a pension of 250 merks, (£166 13s. 4d.) by Edward VI., and appointed grand pilot of England. By his advice, the expedition of Willoughby and Chancellor was sent out in 1553; which, though failing in its primary object, the discovery of a N.E. passage to Cathay, had a far more important result in the establishment of trade with Russia. Cabot was afterwards made governor of a company of merchant traders to that country. So sanguine were the promoters of this expedition, that they had the ships sheathed with lead to protect them from the worms in the water of the Indian Ocean—a contrivance long practised by the Spaniards, but now for the first time used in England, and therefore most likely suggested by Cabot. He appears also to have been the first who gave steady attention to the variation of the compass. The pension which Cabot enjoyed was continued till 1557, four years after the king's death; it was renewed to him by Mary, jointly with one William Worthington, of whom very little is known. All his maps and documents

were given to this person, who either destroyed them, or handed them over to Mary's husband Philip of Spain;—no trace of them has ever been found. Cabot was now in his eightieth year; he seems to have died soon after, though nothing is certainly known either of the time or place of his death. Of high genius and acquirements, steadily pursuing through a long life one great object, infusing into the marine of England a spirit of enterprise which has animated it ever since, and opening up new sources of trade which gave an impulse to her commerce, Cabot must be regarded by us as one of the most illustrious navigators. The confusion and misrepresentation which long prevailed regarding him were fully cleared up by the author of a 'Memoir of the Life of Sebastian Cabot, Illustrated by Documents from the Rolls,' London, 1831, who has placed the events of his life in their true light. CABRAL, F., a Portuguese missionary, author of 'Letters from Japan and China,' 1528-1609.

CABRAL, PEDRO ALVAREZ DE, was sent out by the king of Portugal soon after the return of Vasco de Gama, in command of a fleet of thirteen ships, with 1,200 fighting men, and a number of Franciscan monks as missionaries, with the object of making settlements in the East Indies. He was the first who had the boldness to adopt the route now generally followed in order to reach the Cape without incurring the delays and dangers of the coast voyage. His plan was to sail S.W. till he should gain the latitude of the Cape, and then cross the Atlantic twice. Following this route from the Cape Verde islands, he came in sight of the coast of Brazil, about lat. 10° S., on 3d May 1500. Coasting S. as far as lat. 17°, he took possession in name of his sovereign, and the fort then erected at Porto Seguro is still preserved. His ship was sent home with the news; and although Yanez Pinzon had visited this coast on the part of Spain three months earlier, the claim thence derived was waived, and the sovereignty of Brazil secured to Portugal. In crossing to the Cape Cabral lost four ships in a dreadful storm which lasted twenty days. With the rest he reached India, made some settlements, and returned in July, 1501, with rich cargoes. Yet he was coolly received by his master, on account of the great loss of life which had been sustained, though without any fault on the part of Cabral, who was undoubtedly a navigator of high ability. CÆSALPINUS, ANDRE, a celebrated botanist, was born at Arezzo in Tuscany in 1519. He died at Rome in 1603. Destined for the medical profession, he was educated under Luke Ghines, at the time director of the public gardens at Pisa. It was this undoubtedly which gave him such a love for that branch of study by which his name is most favourably known to posterity. After teaching medicine and botany at Pisa, he was invited to Rome, was made physician to pope Clement VIII., and elected professor of medicine at the college of Sapienza. His medical and philosophical works, of which he wrote a considerable number, are seldom now looked into; and were it not for his book 'On Plants,' the name of Cæsalpinus would probably ere this have been forgotten. Previous to his time naturalists had studied plants more as classics and physicians than as botanists. Cæsalpinus was the first who studied them according to nature; and the publication of his system, though very imperfect, forms a decided era in the study of botany. His method was founded upon the parts of fructification and the germination of the plant; and his observations upon these two subjects have laid the foundation for the natural arrangement of plants formed on the differences of the cotyledon, and the more artificial divisions of Linnæus drawn from their sexual distinctions. Ray, Tournefort, and Linnæus, unite in giving him great credit for his botanical knowledge, and are not above acknowledging the assistance they derived from him in their systems of botany. In his work 'De Plantis,' Cæsalpinus, amongst other things, shows that he had a tolerably good idea of the circulation of the blood. Indeed a knowledge far beyond the age in which he lived, is the grand characteristic of Cæsalpinus.

CÆSAR, AQUIL. J., a Gr. *savant*, 1720-1792.

[Julius Cæsar—From an Ancient Statue.]

CÆSAR, CAIUS JULIUS, the dictator, was born on the 12th of July, B.C. 100. Connected by birth with Marius, and afterwards by marriage with Cinna, he was naturally placed in opposition to the dictator Sulla; and the injuries and insults which he received from the dominant party led, perhaps, to that settled purpose of breaking the power of the aristocratical party, which he cherished from his first appearance in public life. At an early age he distinguished himself both in the camp and in the forum; and had he devoted his great mind to the study of eloquence, he would, doubtless, have been a formidable rival of his great contemporary, Cicero. At the age of twenty-three, (B.C. 77,) he made his first appearance in the forum as a public accuser; and though forced for some time by his youth to act a subordinate part, he steadily kept in view the grand object which he had proposed to himself, and used every means to increase his popularity. He served as quæstor in Spain, B.C. 68, was elected ædile for B.C. 65, and in the following year was made pontifex maximus at the age of thirty-six. When prætor-elect in B.C. 63, during the famous Catilinarian conspiracy, his avowed hostility to the aristocracy excited a suspicion that he was himself privy to it, but no proof was adduced even by his enemies. In the following year he obtained the province of Further Spain, and there first displayed that genius for war which has entitled him to be ranked among the greatest generals of the world. Returning to Rome in B.C. 60, he found Pompey ready to desert the aristocracy; and having succeeded in effecting a reconciliation between him and Crassus, he formed

with them the coalition which is known in history as the First Triumvirate. By the influence of his new friends he was elected to the consulship for B.C. 59, and, while in office, obtained the provinces of Transalpine Gaul, Cisalpine Gaul, and Illyricum, with six legions, for five years. Having thus obtained the command of an army, and the management of an important war, he proceeded to prepare himself for the struggle which he foresaw was impending at Rome. His field of operation afforded him peculiar advantages; the Gauls were the hereditary enemies of the Romans, and the glory of subduing them could not fail to increase his popularity; while the opportunity of passing the winter in the north of Italy enabled him to watch the proceedings of parties in the capitol. During the next nine years he was occupied in the subjugation of Transalpine Gaul; having also twice (B.C. 55 and 54) landed in Britain, and received the submission of the inhabitants of the southern portion of the island. The interval of Cæsar's absence from Rome had produced a great change in the state of parties. Pompey, jealous of the fame of a man to whose elevation he had mainly contributed, had effected a reconciliation with the aristocratical party; and, aided by their support, resolved to crush the conqueror of Gaul. Accordingly in B.C. 49, a decree of the senate was passed, 'that Cæsar should disband his army by a certain day, and that if he did not do so, he should be regarded as an enemy of the state,' the predominant party relying on the influence of Pompey, to whom the management of the contest had been intrusted. But the feelings of the army were entirely with Cæsar; and he, finding that his men were ready to follow him, crossed the Rubicon, which separated his province from Italy, and thus commenced the civil war, the issue of which invested him with dictatorial power. In three months he made himself master of the whole of Italy. Proceeding next to Spain, the stronghold of Pompey, he reduced it to subjection; and, after passing a short time in Italy, followed his opponent into Greece, and brought the contest to a final issue on the plains of Pharsalia, 4th Aug., B.C. 48. The battle of Pharsalia decided the fate of the Roman empire: Pompey fled to Egypt, but was murdered as he landed on the coast; and Cæsar, who followed him, speedily quashed all opposition in the eastern portion of the empire. After a short residence in Rome in B.C. 47, he proceeded to Africa to prosecute the war against Scipio and Cato, who had there collected a large army, and finally brought it to a close on the 6th of April, B.C. 46, by the battle of Thapsus, in which the Pompeian party were completely defeated. In his absence Cæsar had been elected dictator for ten years; and his return to Rome was signalized by four magnificent triumphs. Devoting himself now to the duties of a legislator, he corrected various abuses which had crept into the state; reformed the calendar, thereby conferring a real benefit on the civilized world; and exercised his unlimited power with a degree of moderation which affected even his enemies with surprise. But his career was destined to be short; a conspiracy against his life was formed at the beginning of B.C. 44; and on the Ides, or 15th of March, he perished by the hands of assassins in the senate house, in the fiftieth year of his age.

As a warrior, a statesman, and a man of letters, Cæsar was one of the most remarkable men of any age. [G.F.]

CAGLIARI, PAOLO, commonly called PAOLO VERONESE, was born at Verona in 1528. He was the pupil of his uncle Antonio Badile, and having earned considerable reputation in Verona and its vicinity, settled finally in Venice, where he was the rival of Titian and Tintoretto, and where he died in 1588. Paul Veronese may be accounted among the first of the *machinist* painters, many of his works being little more than ornamental schemes, such as the celebrated 'Marriage at Cana' in the Louvre, containing 120 figures, or portions of figures, of the natural size. The magnificent architectural backgrounds to some of these works are said to have been executed by his brother Benedetto Cagliari. The St. Nicholas in the National Gallery, though small, is a fine example of his style: the chief attraction of his pictures is their gay and rich colouring; they are further distinguished for their great freedom of execution, but are often careless in drawing, and for the most part purely capricious in costume.—(Ridolfi, *Maraviglie dell' Arte*, &c.; Zanetti, *Della Pittura Veneziana*, &c.) CAJETAN, (THOS. DE VIO, cardinal,) so called from his birth-place, Gaeta, in Latin Cajeta, was born in 1469. At the age of twenty-nine he published a noted book in defence of the papal prerogative as to the calling of general councils, and was in consequence raised successively to the bishoprick of Gaeta and the archbishoprick of Pisa. In 1515 he was created cardinal. As the papal legate, he met Luther at Augsburg, and was significantly outwitted by the reformer. Cajetan relied on philosophy and Peter Lombard, but Luther appealed to the Bible and St. Paul. The cardinal's last years were spent in writing learned commentaries on the scholastic philosophy, and on many books of Scripture. He died in 1534. [J.E.]

CALDERON DE LA BARCA, PEDRO, the Shakespeare of Spanish literature, was born at Madrid, of a noble family, in 1600. After having completed his studies, he was for some time attached to the court; after which he served for several campaigns in the Low Countries and in Italy. He had already become famous as a dramatic poet, when in 1636 he was called to Madrid by Philip IV., a patron of letters, and himself a play-writer. From this time he was fixed at the court, and produced dramas with incessant rapidity. After he had reached his fiftieth year he took holy orders, and now busied himself oftener in composing dramatic pieces on sacred subjects. His life was spent in an affluence and popularity very unlike the fate of Cervantes, and did not close till he was very old. He died in 1681 at earliest, and perhaps some years later.—Calderon was either the founder of the Spanish drama, nor in any respect an improver of its forms or ideas. It had been completely developed before the death of Lope de Vega, which happened while Calderon was still young. But he brought to it both a wealth of fancy, an intensity of feeling, and a fertility and

dexterity of invention, which were not paralleled by any other Spanish dramatist, and hardly by those of any other country. Full scope was given for his powers by the structure of the Spanish drama, in which the irregularities of the old English school were not equalled merely, but far outdone. As a painter of character he has little either of strength, of precision, or of accurate observation; he is neither a master of human nature nor a poet of the highest order, while Shakespeare was both; and, indeed, the lyrical cast of all his works gives them the air of dramatic poems rather than of poetic dramas. But, within his own circle of thought and sentiment, he treads with a vigorous and elastic step; and there are very few poets that have stronger attractions for minds keenly alive to the poetical and the romantic.—Calderon's dramas are said to have amounted to not fewer than five hundred; a surprising number, (though not more than a fourth of Lope's,) and a number which precluded the possibility of deliberate care in construction. The principal of those which have been preserved are distributable into three groups. The first contains his comedies of familiar life, the 'Comedies of Cloak and Sword,' as they were called in Spain. These are equally remarkable for their grace and fluency of dialogue, and for their poetic beauty; for the liveliness and interest which animate the stories of the best of them, their general ingenuity in situation and incident, and the equivocal morality and singular violations of good taste which prevail in them all. From among them may be named, 'The Fairy Lady,' 'Welcome Evil, if it Come Alone,' and 'Give Time to Time!' The second division consists of the Heroic Comedies, among which are to be found some of the very finest and most dignified of his works. His masterpiece is usually held to be one of these, 'The Constant Prince,' which represents with profound pathos the self-sacrifice of Don Fernando of Portugal, in an unsuccessful expedition into Barbary. The 'Heraclius' became famous in France, Corneille having been asserted to have imitated it. The singular play, called 'Life is a Dream,' unites poetical imagination with melancholy reflectiveness in a way which imparts to it a charm altogether peculiar. The third class of Calderon's dramas embraces his Religious Pieces, or 'Sacramental Acts,' (Autos Sacramentales,) compositions which bear a strong resemblance to our own miracle-plays of the middle ages, and are, like them, deformed by fantastic extravagances of religious opinion and feeling. Some of them, however, are beautifully poetical. One of the most characteristic, held also by some critics to be the best, is 'The Devotion of the Cross,' a strange farrago of the wildest supernatural inventions, and the most impractically-motived exhibitions of human conduct, but breathing a poetic spirit which is wonderfully impressive. One of its main incidents is the legend of one dead man shivering another, which had been used in a narrative poem of Lidgate, our old monk of Bury. [W.S.]

CALLCOTT, JOHN WALL, the son of Thomas Callcott, bricklayer and builder, was born at Kensington, Gravel-pits, in the county of Middlesex, on the 20th of November, 1766. At a very early age he gave indications of that love of literature, and for the acquisition of knowledge, which distinguished him in his after life. At seven years of age he was sent as a day-boarder to a neighbouring school, where he remained five years, made considerable progress in the Latin language, and commenced the study of Greek. He acquired the first rudiments of music from Henry Whitney, organist of Kensington church, to whom he was introduced in the year 1778. In 1779 he began to practise upon the spinnet, with the view of becoming an organist. In 1780 he learned to play upon the clarionet, and made his first essay in musical composition. In the meantime he continued to improve himself in classical learning, and acquired a knowledge of French, Italian, and German, and made an attempt to master the Hebrew and Syriac languages, while mathematics and algebra also occupied his attention. About the year 1782 he became intimate with Drs. Arnold and Cooke, whom he always regarded as his first patrons. In 1783 he obtained the situation of assistant organist at the church of St. George the Martyr, which he held till 1785. At this time his musical compositions were both numerous and varied; but the connections he had formed induced him to make glee-writing his particular study. His first glee, 'O Sovereign of the Willing Soul,' was written in the year 1784. In 1785 he obtained three medals from the Catch Club, for a catch, a canon, and a glee. In the same year he took his degree of Bachelor in Music, and in 1786 he had two medals awarded him by the Catch Club. In 1787, Dr. Arnold and Callcott established the Glee Club, which has ever since continued to form one of the most attractive musical societies in London. In this year he was admitted among the honorary members of the Catch Club, and received two medals. In 1789, and every year till 1793 inclusive, he obtained all the four medals by the club, and took his place as the most popular glee-writer of the day. In 1789, as colleague with Mr. Evans, he entered upon the office of organist at St. Paul's, Covent Garden, which situation he held until the church was destroyed by fire six years afterwards. In 1790 Haydn arrived in England, and Callcott became one of his earliest pupils; and in the same year he

took his degree of Doctor in Music at Oxford. In 1791 Callcott was married, and on that occasion he wrote the words and music of his glee 'Triumphant Love;' and the following year was appointed organist in the chapel of Female Orphans, which place he held till 1802, when he resigned in favor of Mr. Horsley. In 1797 he commenced to collect materials for a musical dictionary, which was never published, but which led to the publication of his musical grammar, which appeared in 1805. Shortly after this he was appointed to succeed Dr. Crotch as lecturer at the Royal Institution, but his list of arduous and unremitted study weakened his mind, which at length sank under the burdens he had laid too heavily upon it. He died on the 15th of May, 1821. Dr. Callcott was one of the brightest ornaments of the British school of music, and he had the strongest claim to esteem and reverence as a man. His works are well known to all glee clubs, but are much too numerous to be mentioned by name here. A fine selection of his glees, edited by his son-in-law, William Horsley, Mus. Bac., Oxon, was published in 5 volumes in the year 1824. [J.M.]

CALMET, AUGUSTINE, was born in 1672, near Commercy. After studying at Breuil and Port-a-Musson, he entered the order of Benedictines, assuming the vows finally in 1689. Afterwards he was removed to Münster as sub-prior. For a short time he held the priory of St. Lay, and he was abbé of St. Leopold of Nancy when he was removed to Sénonès, where he died in 1757. Calmet was a biblical scholar of no mean pretensions and acquisitions, as is shown by his *Commentaire Littéral*, by his *Dictionnaire de la Bible*, and by many dissertations on biblical subjects. His dictionary is well known in various English translations and abridgments, the most famous of the former being that of C. Taylor, in 5 volumes quarto. [J.E.]

CALONNE, CHARLES ALEXANDRE DE, controller-general (or finance minister) of the French government from the fall of Necker, 1783 to 1787. His name is chiefly memorable as the last of the plodding, intriguing, accommodating, and unprincipled statesmen by whom the French monarchy was hurried to the declivity of the revolution; and especially for his daring experiment of assembling

the notables' on the 22d of February, 1787. Instead of extricating him from his difficulties, this measure really proved the signal of the revolution, as it did of Calonne's disgrace and exile. He was born at Douai, 1734, and educated for the law, which he dishonoured by his treacherous conduct to his client La Chalatois. He is the author of numerous political works and financial memoirs, the best of which may be his 'Tableau de l'Europe in November, 1795.' Buonaparte permitted him to return to France in 1802, where he died on the 30th of Oct., about a month after his arrival. [E.R.]

CALVI, LAZZARO, an Italian painter, d. 1606.

CALVIN, JOHN, (CAUVIN JEAN), was born at Noyon, in Picardy, 10th July, 1509. Law and theology were combined in his earliest studies. He received, when he was but twelve years old, a benefice in the cathedral of his native town, and, at the age of seventeen, there was added to this previous gift the pastoral cure of Monteville. At his father's request he pursued legal studies at Orleans and Bourges. His mind, however, had been gradually opening to the errors of popery; and, in the place last named, he openly avowed himself a disciple of the reformation. In 1532 he proceeded to Paris, but, having provoked the Sorbonne by his zeal for the new doctrines, he was obliged, with his friend Cop, to quit the city in haste. Under the anticipated patronage of the queen of Navarre, he returned to the French capital in 1534, but the fate of his previous visit again pursued him, and he retired to Basel, then travelled into Italy, visited the duchess of Ferrara, soon came back, and arrived, 1536, as if by accident, at Geneva—the city with which his name is now immortally identified. His early labours and stern discipline did not at first suit the Genevese, and he was banished along with Farel. The reformer halted at Berne for a time, and then removed to Strasburg, in one of the churches of which town he laboured as pastor with all his characteristic activity and decision, and not without marked success. In 1541 he returned to Geneva—or rather was recalled—and from that period till his death, his labours were unremitting in the pulpit and from the press. As a citizen, as a pastor, as an ecclesiastical ruler and reformer, and as a correspondent and counsellor of foreign churches, he was instant 'in season and out of season.' The literary work which he executed is almost incredible, especially when we consider the weak and emaciated constitution in which his indomitable spirit was lodged. Frequent headaches and frequent fastings to relieve those spasms,—nocturnal study with a dim lamp suspended from the canopy of his humble bed—watchful anxiety, and domestic bereavement—contributed to shorten his life, and on the 27th of May, 1564, he died at the age of fifty-five. He

had previously summoned the syndics of Geneva to his deathbed, and solemnly adjured them to persevere in their adherence to the pure gospel of Christ. The works of Calvin comprise commentaries on nearly the whole of the Bible—in all of which, with varying success, the mind of the sacred writers is simply and forcibly expounded, without the parade of erudition, but with a clear perception and logical analysis of the process of inspired thought and argument. His 'Institutes,' published at the early age of twenty-four, are a remarkable monument of precocious ability, and not only speedily gained for its author a European renown, but contributed in no ordinary degree to strengthen, fortify, and extend, the protestant reformation. The Latinity of the long dedication to the king of France is remarkable for its elegance and purity. His numerous tracts against popery have wit as well as wisdom in them—especially the one called the 'Inventory of Sacred Relics.' His voluminous correspondence has been partly published, but a very large collection of letters remain in MSS. in the library of Geneva. The industry of M. Bonnet has, during the last two years, discovered many others, and collected them with a view to speedy publication. Of the system of theology named Calvinism, espoused so extensively in France, Britain, and America, this is not the place to speak. The merits of Calvin have been acknowledged by men of very opposite sentiments—as even by Simon and Bayle. No one now will justify Calvin's share in the burning of Servetus. The other reformers, even the gentle Melancthon, vindicated the sad tragedy. It will not suffice to say that Calvin was drawn into the measure, or that the fate of Servetus was in accordance with the law of the state, and therefore beyond the control of the reformer. Calvin distinctly understood his own part in the business, and felt that compassion was to yield to conscience. The only apology for him is, that Calvin was not, in the matter of religious liberty, before his age. He was no exception to the general rule. Cranmer sent Joan of Kent to the stake, and himself in a few years followed. Five Genevan disciples of Calvin were burnt in France about the same time that Servetus was committed to the flames in Geneva. John Knox and Peter Dens use the very same argument and imagery for the capital punishment of heretics. Nay, Servetus himself admitted the legal theory under which he suffered; for in his work called *Restitutio*, published a few months before his own death, he says expressly that the crime of blasphemy is worthy of death—'simpliciter'—'without dispute.' Similar doctrines are propounded in old books of Scottish theology, by Samuel Rutherford, and in 'The Hind Let Loose.' It took a long time to teach protestants that man is responsible to God alone for his belief, and that liberty of conscience is a universal birthright. [J.E.]

CAMBACERES, JEAN JACQUES REGIS DE, duke of Parma, prince of the empire, &c., born at

Montpellier 1753, died at Paris 1824. Though a child of the revolution, and from the first favourable to its progress, the ambition of Cambacères was rather constructive than otherwise, and added to his education for the law, well qualified him for his great share in the preparation of the civil code, and the judiciary organization of France. He possessed the rare talent of preserving his credit for patriotism, without committing himself to the strife of parties, and in 1799 was associated with Napoleon Buonaparte in the consulate. It does not appear that the first consul had much regard for him, and his conduct must be regarded as equivocal, at the least, when it is considered that he rose to fresh honours under the second restoration. The real product of his political activity is fairly represented by his 'Projet du Code Civil, et Discours Preliminaire,' published 1794, and the practical application of it in following years. The most distinguished of his relations were his brother, STEPHEN HUBERT DE CAMBACERES, archbishop of Rouen, and peer of France, a most esteemed prelate, 1756-1818; BARON CAMBACERES, his nephew, and one of Napoleon's generals, 1778-1826; and his uncle, the ABBE DE CAMBACERES, distinguished as a religious writer and preacher, 1721-1802. [E.R.]

CAMBON, JOSEPH, one of the more violent Jacobins of the French revolution, was born at Montpellier, 1754, and returned to the legislative assembly, 1791. He is chiefly memorable as the reporter of the finance commission, by which some kind of order was eliminated from the confusion left by Calonne and his predecessors, and the basis laid for the subsequent financial prosperity of his country. Whatever share he may have taken in the agitation of the period, the merit belongs to him of pursuing this one aim with steady perseverance. He was disliked by Robespierre, and contributed to his fall on the 9th Thermidor, (27th July, 1794,) but was shortly afterwards compelled to save himself by flight. In 1815 he reappeared on the public stage as a member of the representative assembly, and in 1816 was driven into exile as a regicide. He died at Brussels in 1820. [E.R.]

CAMILO, F., a Spanish painter, 1610-1671.

CAMOENS, LUIS DE, is the only Portuguese poet who enjoys a European celebrity. He was of noble family; and his ancestors on the father's side were Spanish. He was probably born at Lisbon; and the date of his birth was 1527, or a few years earlier. After having been educated at Coimbra, he passed some time in courtly society at Lisbon; but an attachment to a lady of distinction brought on him a sentence of banishment to Santarem, where he composed several of his poems and is said to have planned or begun that which is the greatest of them. He then volunteered into the fleet, distinguished himself against the African Moors, and lost his right eye in an attack on Ceuta. On his return he found himself neglected and poor; and in 1553 he embarked for India, declaring a resolution of never again seeing his native country. Escaping from a storm, in which the other vessels of the fleet foundered, he reached the Portuguese settlement at Goa; and sixteen years passed over him in the East, amidst perilous adventures, and continual disappointments and misfortunes. He failed to obtain employment in the public service, and entered as a volunteer in two expeditions, the one to Cochin, (in which almost all the Europeans were destroyed by the climate,) the other against the pirates of the Red Sea. A versified satire on the abuses of the government, provoked the viceroy to banish the poet to Macao, where he lived for five years, glad to support himself by the fees of a small

[Grotto of Camoens at Macao.]

office. In this period his great poem is believed to have been completed. He saved the manuscript with difficulty on being shipwrecked on the coast of Cambodia, when at length allowed to return to Goa. Here he was twice imprisoned, first on a groundless charge of malversation in office, and again for debts which he was unable to pay. He

now took up arms again, in the service of the governor of a remote settlement; and there, weary and dispirited, he was tempted to sail for Europe in a homeward-bound vessel which happened to pass. He returned to Lisbon in 1569, as poor and prosperous as he had been when he departed. He published his noble poem, but gained by it neither fame nor profit. The public were blind to its value; and the government and court were otherwise occupied. It was probably about this time that Camoens would have died of hunger, had not a black servant begged for him at night in the streets. In 1578 King Sebastian, embarking on his fatal expedition against Morocco, perished in the bloody battle of Alcazar; and, while his mind had been diverted alike from administration and from literature by his chivalrous dreams, his successor, an aged churchman, was engrossed by ecclesiastical business and dismayed by public calamities. The great poet of the nation was left to his fate. He died in a public hospital in the year 1579.—Camoens left untried hardly any department of poetry, from the tragedy to the sonnet; and high praise is given to many of his smaller compositions. But his immortality was caused by the magnificent heroic poem which we commonly call 'The Lusiad.' The name he himself gave to it was 'Os Lusíadas,' that is, 'The Lusitanians,' or 'Portuguese.' He designed in its ten books to celebrate the glory and greatness of a nation, as to which he triumphantly declared that it was soon to surpass the fame and mastery of all others in the world. The main story the voyage in which Vasco de Gama rounded the Cape of Storms, and discovered the passage to India; but the whole history of Portugal is engrafted on this stock. Nearly a third of the poem is occupied by a narrative of the rise of the kingdom, which Vasco delivers to the king of Melinda, much in the manner of Æneas's tale to Dido; and occasion is taken for introducing minor incidents and characters in shorter episodes. A plan embracing a field so wide, could not well be executed without making too heavy demands on the attention of the reader; and undoubtedly there are few who do not feel the poem, as a whole, to be wanting in interest. Another weakness lies in the want of local truth which pervades it, and which exhibits itself both in the scenery and in the characters. The work abounds in supernatural machinery, which is nothing else than a repetition of the heathen mythology, while it often passes into undisguised allegory. Nor is any attempt made at describing exactly either the landscapes or the manners of the East: all is general and uncharacteristic. But the glow of patriotic and warlike animation, the frequent pathos, (as in the story of Inez de Castro,) and the constant affluence of imagery beautifully poetical, combine in presenting us with a series of pictures, such as is very rarely to be met with in poetry, and fully sufficient to vindicate the place of Camoens as one of the greatest among modern poets. The diction and versification, also, are pronounced by competent critics to possess the very highest merit. [W.S.]

CAMPAN, MADAME DE, a lady of the royal household, celebrated for her memoirs of Marie Antoinette, 1752-1822.

CAMPANELLA, THOMAS, a distinguished

Spaniard of the 16th century, no less remarkable from the originality of his writings, than through the extraordinary reverses of his life. The contemporary of Bacon and Des Cartes, he ranks with Giordano Bruno and a few others, as evidence that the time had come for a successful revolt against the philosophy of the Peripatetics and the Church. Like Bruno, his tendencies were towards Platonism; many of his views, also, were tinted with mysticism. He had, however, a clear conception of the nature of metaphysics; and he has contributed one of our many 'Utopias' to political theory, in his 'Civitas Solis.' Campanella found in the Spanish government a mortal foe. Seven times did he undergo the horrors of the *question*; he passed seven years in a dungeon—supporting his courage and nourishing his soul, with thought. At length he escaped to France, and found a protector in Richelieu, with whom the hatred borne him by Spain was sufficient recommendation. Campanella's works cannot be overlooked by the thorough student of metaphysics: the more important of them have been recently collected and published in Germany. [J.P.N.]

CAMPBELL, MAJOR-GEN. SIR NEIL, British resident at Elba in charge of Napoleon, died 1827.

CAMPBELL, THOMAS, was born at Glasgow in July, 1777. His father, descended of a good family in Argyleshire, was a Virginia merchant; but before the birth of the poet, the youngest of his eleven children, he was in decayed circumstances, and subsisted on small annuities from mercantile societies, and by receiving young men into his house as boarders. Thomas, after distinguishing himself at school, passed through the university of Glasgow with high reputation, which, however, was gained less by steady industry or exact learning, than by the precocious brilliancy of his essays in prose and his versified translations from the classics. Till the end of his life, Greek was his favourite study; and he was vainer of his proficiency in it than of his poetry or the fame it brought him. His studies at college were assisted by a bursary or exhibition, and by the hard-won gains of private teaching; and he became successively, for short periods, tutor in two families in the west of Scotland. The poverty of his family precluded his pursuit of the more ambitious professions; and a few months spent as a copying clerk in Edinburgh, disgusted his sensitive and indolent mind with the drudgery and captiousness of the attorney's chambers. This migration introduced him to the notice of literary men; and to the encouragement and criticism of Dr. Robert Anderson, more than to anything else, was owing his

prosecution of poetical composition.—One of his first printed efforts was 'The Wounded Hussar,' which appeared when he was about twenty years of age. About the same time, living in humble lodgings in Edinburgh, and supporting himself by private teaching of the classics, and by obscure drudgery for booksellers, he was composing poetical fragments, which were gradually incorporated into 'The Pleasures of Hope.' This poem, published in 1799, in its author's twenty-second year, became immediately and deservedly famous; and though, in spite of advice, he sold the copyright absolutely for sixty pounds, the publishers, on its success, were for some time very liberal to him; and the reversion of the copyright became profitable in his declining years. Being now determined on making literature his profession, he spent upwards of a year in Germany. A great poem, 'The Queen of the North,' ardently projected, was soon dropped; but he transmitted from abroad, to the *Morning Chronicle*, several of his finest lyrics, among which were, 'Ye Mariners of England,' and 'The Exile of Erin.' He had intended settling in Edinburgh, where he had long been intimate with Jeffrey, Brown, Scott, and Stewart, and most of all with Alison; and with this design he set down his parents in that city. To them, indeed, to his mother after her husband's death, and to his sisters always afterwards, he was steadily and honourably affectionate and generous.—In 1803, however, he found it advisable to remove to London; and in the same year, uncertain though his prospects were, he married his cousin Miss Sinclair. Next year he obtained an engagement with the *Star* newspaper, from which he received about four guineas a-week, chiefly earned by translating foreign gazettes. About the same time appeared 'The Battle of the Baltic.' For seventeen years from this date he inhabited a house at Sydenham, near London. In 1805 his circumstances were improved by a pension of two hundred a-year bestowed by Fox's administration; partly, perhaps, for zealous advocacy of Whig principles, but prompted also by his poetical celebrity, and by the necessities of one who was always thriftless, and disqualified, both by temperament and by feebleness of health, for steady labour as a bookseller's hack. In 1807 was published one of the fruits of his taskwork, 'The Annals of Great Britain,' for which he received three hundred pounds from an Edinburgh bookseller. In 1809 appeared 'Gertrude of Wyoming,' to which, the year after, 'O'Connor's Child' was annexed. The place which Campbell justly holds as one of the classics of English poetry was now securely gained, when he had only reached his thirty-third year; and, though his life was but half spent, it may safely be said that nothing which he afterwards wrote was worthy to be ranked with his earlier achievements. His time, in fact, was thenceforth frittered away in desultory and occasional studies, and in toils which had no higher purpose than the subsistence of his family; and the exquisite delicacy and correctness of taste, which give such a charm to his finest poems, did no more than impede him in his prose writing. The romantic glow of imagery and sentiment, which had inspired, in youth, his ethical meditations, and which had risen into a more manly enthusiasm in his

martial lyrics, died away amidst the hurry and coarseness of real life; and the poet certainly wanted the leisure, and probably wanted the native vigour of thought, which might have furnished him with other and severer themes, and prompted a new tone of poetic inspiration.—In 1812 he delivered, with great popularity, six lectures on poetry at the Royal Institution: two years afterwards, a long visit to Paris, while the masterpieces of Grecian sculpture and Italian painting were still unremoved from the Louvre, gratified his classical taste, and suggested much of attractive reflection. Soon afterwards a legacy from a Highland cousin placed at his command the income of a sum, which in the end exceeded four thousand pounds. In 1819 appeared his well-selected 'Specimens of the British Poets,' accompanied with criticisms, which written with very fine judgment and fair knowledge, are the only prose compositions of Campbell that are likely to be remembered. In 1821 he became editor of 'The New Monthly Magazine,' to which he contributed a good many critical essays and poems; and the editorship, though never carefully attended to, was retained for ten years. During these years several events occurred. The ill success of 'Theodric' disappointed him grievously. His surviving son, (the other having died in infancy,) was now, at the age of fourteen, pronounced to labour under mental aberration which proved to be hopeless; and in 1828 his domestic calamities were completed by the loss of his wife. In 1825 he was chiefly occupied in organizing the London university, visiting Berlin to obtain information for the purpose. In November 1826, he was elected rector of the university of Glasgow; and, exerting himself actively in promoting and suggesting reforms, he was re-elected twice afterwards. About and after the close of this period, also, very much of his time was taken up with the affairs of the Polish refugees.—In 1831, having resigned his first editorship, he for a short time edited the *Metropolitan*. Seven or eight months from September, 1834, were spent by him in Algiers, which he seems to have had no purpose in visiting except that of making a book. He executed this design in his 'Letters from the South.' Among several pieces of drudgery which he now performed was his 'Life of Mrs Siddons.' 'The Pilgrim of Glencoe,' the last of his considerable poems, published in 1842, was no successful even in his own estimation. His health long uncertain, was now irretrievably shattered, and fond of society, and often tempted to convivial excesses, he had taken but too little pains to preserve health, especially since domestic distresses had fallen so heavily on him. His affairs too, became much embarrassed; and in July 1843, giving up the last of several houses he had successively occupied in London, he retired with his niece to Boulogne. There, after a winter of suffering, he died in June 1844. [W.S.]

CAMPE, J. H., a German author, 1746-1818.

CAMPEGGIO, LORENZO, cardinal nuncio to the court of Henry VIII., 1474-1539.

CAMPER, PIERRE, a celebrated anatomist and naturalist, was born at Leyden in 1722. He died in 1789. He was educated as a medical man, under Albinus, Gaubius, and Musschenbroek. After he had taken his degree, and paid the last duties

his parents, he visited England and Paris, where he made the acquaintance of such men as Hunter, Sir Hans Sloane, Buffon, &c. He successively filled the chairs of philosophy, medicine, and surgery, at Franeker, Amsterdam, and Groningen. At the latter place he spent ten years devoted to study and the duties of his professorship, and used to say these years were the happiest of his life. He was twice elected deputy to the assembly of the states, and was at length nominated councillor of state. Camper possessed a singular facility for acquiring languages. He spoke fluently Latin, English, German, and French, and read Greek and Italian with ease. The dissertations and memoirs upon medical subjects which he published, extended his fame to all parts of Europe; but it is upon his profound knowledge of comparative anatomy applied to the study of natural history, that his chief reputation depends, and it is by it that his name will descend to posterity with the greatest éclat. One of the great objects of Camper's life, was to show from anatomical details applied to natural history, that there is a regular gradation in animal beings from man downwards, and a scale of proportions by which it might be demonstrated how all living beings are connected one with another in the general system of creation. He was one of the first to lead the way in the study of Palæontology, and in a memoir upon fossil bones, after examining and comparing a series of those with the skeletons of animals existing at the present time, he arrived at the conclusion (since his time so ably carried out by Cuvier) that certain species of animals have at different times been destroyed by various revolutions of the globe. One of his most striking discoveries was that of the bones of birds containing air. It was known that the bones of birds were light, and possessed no marrow; but it was reserved for Camper to show from anatomical demonstration that there was a direct communication between the cavities of the bones and the lungs. Hunter made the same discovery soon afterwards. Camper's memoirs upon the organs of hearing in fishes—on the anatomy of the orange-outang—on the origin and colour of the negro—and on the facial line as applied to characterize the different races of man, show great talent and observation; while the zeal with which he undertook the cure and prevention, by inoculation, of the terrible epizootic which raged amongst the horned cattle in Holland in 1768, proved him to be a patriotic citizen, as well as an enlightened anatomist and physician. CANDOLLE, AUGUSTIN PYRAMUS DE, a distinguished botanist, was born at Geneva in 1778. He died in 1841. From the age of sixteen he devoted himself to the pursuit of botany. He took himself to Paris, where he attended the lectures of Cuvier, Lamarck, Fourcroy, Vauquelin, &c., and prosecuted his botanical studies under Jussieu and Desfontaines. He adopted the natural system, and became one of its most distinguished supporters. In 1807 he was elected professor of botany at Montpellier. This chair he resigned upon the restoration of the Bourbons, at which time his native city was restored to its independence. Thither he retired, and was appointed in 1816 to the chair of natural history, which was expressly instituted for him. His botanical works are numerous and excellent. The 'Prodromus Systematis Regni Vegetabilis' is the most important, though he did not live to complete it. His incessant studies, it is to be feared, at last told heavily upon his constitution. For some years his health was declining, and though in 1840 he undertook a journey as a relaxation from his labours, he did not derive any decided benefit from it. M. De Candolle was distinguished, in addition to his great and deserved reputation as a botanist, for his activity in promoting measures of public utility, such as the improvement of agriculture, the cultivation of the arts, the advancement of public instruction, and the amelioration of the legislative code of his native city. CANNEMAN, ELIAS, a Dutch statesman, principal agent in restoring the house of Orange, 1813.

CANNING, GEORGE, a distinguished British statesman, was born in London, on 11th April, 1770. He began life in circumstances little likely to have fostered a statesman. His father, a man of good family, suffering from the light in which his connections viewed an imprudent marriage, died while George was an infant. The widow was subsequently twice married, tried the stage, and, though there was no blot on her reputation, by a wandering and rather discreditable life, justified the distaste towards her of the Canning family. It is, however, among the amiable features of this statesman's character, that, when he was attracting the attention of the world, and must have felt

his mother an impediment to his prospects, he treated her with uniform kindness and public respect. He was educated by his maternal uncle, a merchant in the city, and studied at Christ Church, Oxford. He early showed the versatility of his powers, by not only taking a high academical position, but gaining a host of admirers among his own contemporaries by his conversational powers and efforts in light literature. His early association with Sheridan marked him out as a probable acquisition to the Whigs, and a dramatic anecdote is told of Godwin having been sent to offer him the championship of the friends of the people—an offer on which he is said to have deliberated ere he rejected it. In 1793, however, he entered parliament as a supporter of Pitt. His opinions were naturally liberal, but his fastidious taste, and somewhat scornful temper, revolted against popularity, and thus it was, that, while he joined the Tory party, he carried into it a decided practical leaning to Whig principles. While the aristocracy have charged him with betraying them, he wrote in the 'Antijacobin,' and other quarters, some of the bitterest satires against democracy that have appeared since the days of Theophrastus. He took office, as under-secretary of state, in 1796. In 1800, he married one of the daughters of General Scott of Balcomie, in Fifeshire, whose large fortune rendered him no longer liable to the imputation of being an adventurer. On the return of the Tory party to power in 1807, he was made foreign secretary. In 1809, in consequence of a quarrel with Castlereagh, which produced a duel, he resigned his office. He soon afterwards commenced his pleadings for catholic emancipation, which tended so greatly to the consummation which he did not live to see. He was on the eve of his departure to be governor-general of India when the death of Castlereagh, in 1822, made him yield to the urgent demands that he should strengthen the ministry by taking office as foreign secretary. In 1825, he performed one of his favourite achievements in the acknowledgment of the independence of the Spanish settlements in South America. In February, 1827, he succeeded Lord Liverpool as prime minister. The chancellor, Eldon, and some other members in the government, of high Tory principles, resigned office on the occasion, in a peculiarly emphatic manner: and Canning sought and to a considerable extent obtained the support of the Whigs. But in his short career he was so severely harassed by the opposition of his former colleagues, that he died on 8th August, 1827, exhausted both in body and mind. [J.H.B.]

CANO, ALONSO, a celebrated Spanish painter and sculptor, and also architect, was born at Granada in 1601. He studied at Seville, sculpture with J. Montanes, and painting under Pacheco and Juan de Castillo. He was appointed painter to Philip IV., and practised some time at Madrid, but settled finally at Granada, where he established a considerable school; he died there in 1667. The extent and versatility of his powers have procured Cano the title of the 'Michelangelo of Spain;' his pictures are rich in effect, and display great vigour of execution; they are numerous at Seville, Madrid, Toledo, and Granada, where are still preserved some celebrated altar-pieces.—(Can Bermudez,

CANO, JAMES, a Portug. navigator, 15th ce.
CANO, J. S., a Spanish navigator, died 1526.
CANOVA, ANTONIO, one of the most celebrated sculptors of modern times, was born in the village of Possagno, near Treviso, in 1757. He was sent at an early age by the Venetian government to complete his studies in Rome; for which purpose he was granted a pension of 300 ducats per annum for three years. This judicious liberality of the Venetian government was the indirect cause of Canova's settling in Rome, and similar in a great measure contributed to the revival of the arts in the nineteenth century. His first work noted was the group of Theseus and the Minotaur; this was succeeded by the great monuments of popes Clement XIII., and XIV., and Pius VI., which raised the reputation of Canova above that of all his contemporaries; the monument of Clement XIII. is that in St. Peter's of which the celebrated reposing lions form a part.—Canova's works are extremely numerous, and are generally beautiful, combining nature with classic beauty and proportion; his extraordinary ability, and perhaps industry also, are well displayed in a noble collection of casts after his works, preserved together in the academy at Venice, among which Hercules in the tunic of Deianira hurling Lich into the sea from the rock, is a most imposing group. Some of his best works are preserved at the Vatican, as the Boxers and many others; the celebrated Venus is in the Pitti Palace at Florence; the three Graces are in this country. Apsley House is a colossal statue of Napoleon. Canova died at Venice, October, 1822, and a magnificent design which he had made for a public monument to Titian, was with slight alteration adapted, and in 1827 executed by some of his pupils in commemoration of his own memory; it is the church of the Frari.—Canova was in every sense a most successful artist; his reputation European; he amassed great wealth, and was created marquis of Ischia by the pope; there is a portrait of him by Sir Thomas Lawrence.—(Mansueti, *Vita di Antonio Canova*, 1827; Canova's Works by Moses, &c., &c.) CARACCI. The name of a celebrated family of painters of Bologna.—AGOSTINO CARACCI, was born at Bologna, where his father carried on the business of a tailor, in 1559. He was placed first with a jeweller, and studied painting afterwards under Prospero Fontana, Domenico Tibaldi, and Cornelius Cort; with the last he practised also engraving. Agostino was the most active teacher in the academy opened by the Caracci in Bologna in 1589 until 1600, when he went to Rome; he was then employed by his brother Annibale to aid him in the Farnese Gallery there, for which he executed the 'Cephalus and Aurora,' and the 'Triumph of Galatea;' the cartoons of these two frescoes are in the National Gallery. But the brothers disagreeing, Agostino retired to Parma, where he died shortly afterwards, March 22, 1602. He was more distinguished as an engraver than painter. — ANNIBALE CARACCI,

the younger, brother of Agostino, was born at Bologna in 1560; his father intended him to be a tailor, but his cousin, Ludovico Caracci, induced him to follow painting, for which Annibale showed decided ability, and in which his cousin gave him all necessary instruction. After carrying on conjointly with his brother and cousin the celebrated academy of Bologna for ten years, Annibale was invited by the cardinal Farnese to Rome in 1600, and he there executed the celebrated frescoes, known as the 'Farnese Gallery,' for that cardinal, receiving a salary of £25 a-year besides maintenance. This great work was finished in 1604, when Annibale received a further donation of 100 guineas. It was preferred by Poussin to all the works in Rome after the frescoes of Raphael; it has been engraved by Carlo Cesio. Annibale appears to have been an invalid after the execution of this work, for he did little more in Rome, and died there 15th July, 1609; he was buried in the Pantheon by the side of Raphael.—LUDOVICO CARACCI, the founder of the eclectic school of Bologna, was born there in 1555; he appears to have been very dull in his youth, and at the school of Prospero Fontana was known as the *oz*, (il bue.) He studied afterwards many masters in various places, as Correggio, Julio Romano, Titian, and others, and in endeavouring to combine their several beauties led to the establishment of the principle of eclecticism, and was actually the founder of the academic system.—He was the real head of the academy of the Caracci established in 1589, and after the departure of his two cousins for Rome, carried on by him alone until his death in December, 1619. Domenichino, Guido, Albani, and Lanfranco, were among the numerous distinguished scholars of this celebrated school. Ludovico's principal works were the frescoes of the convent of San Michele in Bosco, near Bologna, long since perished, but existing in the prints after them by Giovannini. There are several excellent oil pictures by Ludovico in the gallery of Bologna.—(Bellori, *Vite de' Pittori Moderni*, &c.; Baglione, *Vite de' Pittori*; Malvasia, *Felsina Pittrice*; Wornum, *Descriptive and Historical Catalogue of the National Gallery*.)

CARAVAGGIO, MICHELANGELO MERIGI, commonly called MICHELANGELO DA CARAVAGGIO, where he was born in 1569, was originally a mason's labourer, but while still young gained so considerable a position as a portrait painter at Milan, that he was induced to try his fortune in Venice, where he became a student of the works of Giorgione; and he eventually established himself in Rome. His poverty was a serious obstacle to his success in the great capital of the arts, for some time, when he was obliged to work for the Cavaliere d' Arpino; but his celebrated picture of the 'Card Players,' and shortly afterwards a few religious pieces, of which his masterpiece is the 'Deposition of Christ,' now in the Vatican picture gallery, established his reputation as one of the principal painters of his time.—

Caravaggio's good fortune was of short duration: being of a violent temper, he killed a companion in consequence of a dispute at a game of tennis. He fled to Naples, thence he went to Malta, and spent some time at Palermo; but finally having obtained the pope's pardon for the act of homicide, he set out in 1609 in a felucca for Rome; he was arrested on his way by mistake, by a Spanish coast guard, and when he gained his liberty he discovered that the crew of the felucca had gone off with all his property; he wandered despondingly along the coast to Porto Ercole, where, what with disappointment and the extreme heat of the weather, he was seized with a fever, and died in a few days, at the early age of forty.—Caravaggio was a great colourist, but his pictures are black and heavy, and so ordinary in their general treatment of form and accuracy, that his style was designated the *naturalist*, in contradistinction to the prevailing *ideal* taste of the time. He had many imitators, who are called *naturalisti* and *tenebrosi*; the celebrated Spagnoletto is the most distinguished of his followers. This taste was much spread in Spain, and had its votaries in France and the low countries. Valentine and Honthorst (Gherardo, della notte) were decided imitators of Caravaggio.—(Bellori, *Vite de' Pittori*, &c., Rome 1672.) [R.N.W.]

CARDAN, JEROME, one of our true 'curiosities of literature,' born in Pavia in 1501, said to have caused his own death in 1576, that he might not, by living longer, falsify his prediction of that event! There are not many characters more difficult to delineate by a few sketches than Cardan's. Of great industry, undoubted originality and power, and extensive acquirements, his fame yet rests for the most part on his pure charlatanerie. As a moral entity, if indeed the term can with decency be applied to him, he was also a mass of contradictions; he loved knowledge, sought appar-

ently for truth, and experienced high aspirations nevertheless he never shrunk from deceit and falsehood; his practical life full of disorder; his scientific faith worth nothing—he stole from Tartaglia and published as his own the famous rule for the solution of cubic equations. He wrote of everything—often advancing knowledge; but he pretended to deal with all difficulties under the sun. He said that, like Socrates, he had a demon like Swedenborg afterwards, he claimed supernatural insight during the *extasis*;—it is not improbable that he was affected by that singular modification of vitality now known as *mesmerism*. I were useless to recount seriously the opinions of man so strange and disorderly; nor can we undertake to reckon up even the topics on which he wrote. His productions fill 10 volumes folio; the oddest of them being the treatise 'De Vita Propria,'—something of the cast of Rousseau's 'Confessions,' as full of vanity, of insincerity, of passion of eloquence. Cardan's fame, while he lived, resulted from his skill as a physician, and his astrology. He was doubtless helped in his profession by superior acquaintance with chemistry; to which one may safely give the credit of his celebrated cure of the archbishop of St. Andrews. As might have been expected, his private life and affairs were ever in confusion: one son fell under the axe of the public executioner, because he had poisoned his wife; another was shut up in prison for safety's sake, at the instance of his own father.—These notices may help the imaginative to conceive something of Cardan. CAREY, WILLIAM, was born on 17th August 1761, in the village of Paulerspury, Northamptonshire. Although his father was clerk of the parish he early displayed a tendency to dissent, and having announced his adherence to the principles of the baptist persuasion, was in 1783 baptized the river Nen, and soon after chosen pastor of small baptist church in the neighbourhood Northampton. While assiduous in the discharge of his official duties, he prosecuted his studies with intense ardour in private, and was greatly distinguished for the extent and variety of his knowledge, his accomplishments embracing all the modern European languages, and several branches of science, particularly botany and natural history. In 1787 Carey was removed to the pastorate of more numerous church in Leicester, where

beck comprising many educated members, he had better scope for the exercise of his natural and acquired talents. But his mind was absorbed with visions of missionary enterprise among the heathen; and while on a visit to Mr. Fuller Kettering, along with Dr. Ryland and Mr. Hatcliffe of Olney, he laid the foundation of a Baptist missionary society, of which he himself became the first agent and the brightest ornament. Accompanied by his wife and sister-in-law, he embarked on 13th June, 1793, for India, and after experiencing some very trying vicissitudes, he chose Madras for his station; but the Indian government having refused their permission to any permanent establishment of a missionary kind, he was obliged to quit that place. Through the influence of the governor, who was exceedingly favourable to the missionary cause, Mr. Carey now established his head-quarters at the Danish settlement of Serampore, where, assisted by Messrs. Marshman and Ward, his efforts for the Christian good of a populous and extensive province were followed by a degree of success far exceeding his most sanguine expectations. Carey was appointed by the marquis of Wellesley to the professorship of Bengalee in the College of Fort-William, and as he voluntarily added to the duties of this chair instruction in the Sanscrit and Mahratta languages, he became familiar with the leading dialects of India. Many literary works connected with this department of mental philosophy proceeded from his pen. But his greatest achievements were in the province of biblical translation, having been the main instrument in issuing new versions in upwards of forty of the Indian languages, and bringing the Scriptures within the reach of three hundred millions of human beings. Under these indefatigable exertions the health of Dr. Carey at length sank, and he died in 1834, in the seventy-third year of his age. [R.J.]

CARNOT, LAZARE NICOLAS MARGUERITE, characterized by Bourdon de l'Oise as 'the man who had organized victory in the French armies,' is one of the fairest and most steadfast characters in the history of the French revolution. He was distinguished in early life for his application to the exact sciences, and the mathematical and philosophical works which he has left behind him are no mean monument of his genius and industry in the pursuit of his favourite studies. But it is as a military engineer and minister of war under the revolutionary government and the empire that the reader of history is most interested in him. He was born in 1753, and was only eighteen years of age when his skill in fortification and tactics procured him an appointment as second lieutenant in a corps of engineers. In 1783 he received the laurel crown from the academy of the ancient capital of Burgundy for his eulogium of Vauban, and in 1791 was sent to the legislative assembly by the Pas-de-Calais. In the convention he voted for the death of Louis XVI., and in the Committee of Public Safety was implicitly and exclusively trusted with the direction of the military operations, a trust which he fully justified by his admirable conduct of affairs on the defection of Dumouriez. His influence and daring in the committee, where he always opposed himself to the dictatorial ambition of Robespierre, Couthon, and St. Just, was due to his 'cold mathematical head,' which enabled him to organize so many armies and send them all to combat with the *prestige* of victory. After the revolution of the 18th Brumaire, he was some time minister of war, but voted against the consulate for life and the empire, and when all hope of the republic was lost, retired from public life and devoted himself to literary and scientific pursuits. The disasters of 1812, and the dangers which threatened France, recalled his public spirit, and he frankly offered his sword to the emperor, who appointed him to the command of Antwerp, and on his return from Elba restored him to his old functions as minister of war. He opposed the second abdication, but it was in vain, and Napoleon manifested his esteem and regret in the memorable words,—'M. Carnot, I have known you too late!' He was proscribed at the restoration, and died at Magdeburg in 1823. Some of his brothers have also acquired a name in French history, of these we may mention **JOSEPH FRANÇOIS CLAUDE**, a magistrate and writer on criminal law, born 1752; and **CLAUDE MARIE**, a military officer and minister of state, born 1755, whose identity, perhaps, is sometimes confounded with that of his brother Lazare.  CARR, SIR JOHN, au. of several 'Tours,' d. 1822.
 CARR, W. H., a clergyman, and patron of the fine arts, distinguished for a bequest of pictures to the National Gallery, died 1830.

CARRA, JEAN LOUIS, a political and historical writer, condemned with the ill-fated Girondists by the revolutionary tribunal, 1793, was one of the earliest in the field at the outbreak of the French revolution, as editor of the 'Annales Patriotiques.' He was born in 1743, and though his parents were in narrow circumstances, received a liberal education. He was a man of adventurous spirit, and astonished Mirabeau by offering to raise all Germany against the emperor with only 'fifty thousand men and twelve printing presses.' He is worthy of remembrance as the chief instrument in exciting a vindictive feeling against the royal family, and this, perhaps, may be considered his real part in the revolutionary drama. His condemnation with the illustrious party of the Gironde, was an honour to which he was scarcely entitled, and is a sign, at least, of his improved taste as he approached the end of his career. Having when a young man spent some time in the Danubian provinces, he published a work on the history of Moldavia and Wallachia, with an essay upon their actual state in 1776. [E.R.]

CARRANZA, B., a Fr. ecclesiastic, 1503-1573.

CARRARA, FRANCIS, lord of Padua, memorable for his wars with the Venetians, died 1393. His son of the same name, after a long struggle with them, strangled in a Venetian prison, 1406.

CARRE, REMI, a writer on singing, 1706-1773.

CARRE, W. L. J., a wr. on civil law, 1777-1832.

CARREL, NICOLAS ARMAND, one of the most sincere patriots and noble-minded men of modern times, chief editor of the *National*, and author of several historical works, was born at Rouen, 1801, and killed in a duel by M. Girardin, 24th July, 1836. He received a military education at St. Cyr, and fought in the auxiliary legions of Spain in the late struggle against absolutism. He took the direction of the *National* after the revolution of 1830, and distinguished himself by his fine spirit and patriotic sincerity. He was extremely sensitive in points of honour, and had fought several duels before his last fatal rencontre with his more wily opponent. He bears the reputation of a good man, and was much beloved by his friends in private life. His principal work is a 'History of the Counter-Revolution in England.' [E.R.]

CARRERAS, JOSE MIGUEL, a patriotic Spaniard of South America, engaged with his two brothers, JUAN and LUIS, in the revolution of Chili, and executed in 1822, as the latter had been 1818.

CARRIER, JEAN BAPTISTE, born 1766, was

an obscure attorney, brought into note by the progress of the French revolution, and sent to the national convention, 1792. His memory is held in execration for deeds of horror without a parallel except in the similar scenes of iniquity enacted by his rival in cruelty, Collot D'Herbois. He was sent to Nantes in October, 1793, to assist in repressing the civil war commenced in La Vendée by the priests and royalists. He selected his committee, to give an air of legal sanction to atrocities, from the very refuse of the canaille, and at length dispensed with all form whatever, and executed his prisoners *en masse*, no less than 15,000 being disposed of by fusillades or drownings in one month, with whose corpses the waters of the Loire were literally infected and the banks strewn. The refinement of cruelty with which this was accomplished, and the obscenities with which he seasoned his repast of blood, almost surpass belief. He was at length recalled by the Committee of Public Safety, and on the fall of Robespierre, condemned by the revolutionary tribunal and executed. A memoir upon the life and crimes of Carrier was published by Babeuf in 1799. Care should be taken not to confound this monster with a professor of civil law, and author of various treatises on jurisprudence, born 1770, who must have felt it a misfortune to bear precisely the same names. [E.R.]

Walpole 1730-1741; in office again as secretary of state 1742-1744; and as president of the council from 1750 till his death, 1763.

CARTERET, PH., a naval officer, 18th cent.

CARTIER, JACQUES, a native of St. Ma who, in 1534, under commission from the king of France, took possession of Canada in the name of his sovereign. The next year, he returned, ascended the St. Lawrence, or Hochelaga, as the Indians called it, as far as a beautiful island containing a picturesque and fertile hill, which named Montreal, royal or king's mount, close which was an Indian village, called by him a ci also named Hochelaga. Cartier wintered in the river, and returned home on the breaking up the ice. He did not effect a settlement; a not having taken home any specimen of gold or silver, he did not receive much favour from master; so that in the expedition of M. Roberval sent out as viceroy in 1540, Cartier had no higher appointment than that of pilot. [J.]

CASSINI. The family name of several dis-

tinguished observers and astronomers.—1. JOHN DOMINIC, born in Piedmont in 1625: the first professor in the Royal Observatory in Paris, which was founded in 1670. Cassini was one of the earliest to conjecture that the comets, like the planets, move in regular curves; he published valuable observations on Jupiter's satellites; but his fame chiefly rests on his discovery of four of the satellites of Saturn. He laboured also at measurement of the meridian through France. He died in 1712.—2. JOHN JAMES, son and successor of the foregoing, also enriched science with valuable observations and discoveries—in physics as well as astronomy. Through an unfortunate misapprehension he maintained in opposition to Newton that the figure of the earth is an *oblong* spheroid; and as the contest grew keen, the French sovereign sent out two commissions, one to the equator, the other to the polar circle, to decide it. These are the famous commissions, the first under Bouguer and La Condamme, the second under Maupertuis, &c. Newton's view was of course confirmed. Cassini died in 1756.—3. CASSINI DE THURY, CÆSAR FRANCIS, second son and successor of James. Also a good and laborious observer, he was chiefly occupied with the measurement of the meridian in Europe. He observed also a transit of Venus, and wrote much on parallax and refraction. He died in 1784, and was succeeded in the observatory by his son, COUNT JOHN DOMINIC, with whom terminated a family illustrious in the scientific annals of France.

CASTILLON, J. F. SALV. DE, a phil., 1709-91.

CASTLEREAGH, ROBERT STEWART, mar-

quis of Londonderry, a British statesman, was born on 18th June, 1769. In the Irish parliament, where he first sat, he was reputed to belong to the opposition, but obtaining a seat in the English Commons, he chose the ministerial benches. On his accession to the title of Castle-reagh, in 1797, he returned to the Irish parliament. As secretary of state, he made great and successful efforts for the achievement of the Irish Union, and he was one of the statesmen most prominently marked out on that occasion for the wrath of the Irish people. He sat for Down in the united parliament, and in 1805 became the war and colonial secretary, resuming these offices on the restoration of his party in 1807. In 1809, a dispute, in the unfortunate Walcheren expedition, drove him to a duel with Canning, and the resignation of his offices. In 1812, he again became foreign secretary; and in 1814 and 1815 he represented Britain at the settlement of Europe by the congress of Vienna. He was popularly charged with connivance at the aims of the European despots; and yet, arbitrary as were his principles, it is now understood that his liberality and firmness did much to check the tyranny and rapacity of the continental monarchs. In April, 1821, he succeeded his father as marquis of Londonderry in Ireland, but this did not prevent him from retaining his seat in the House of Commons. He was a man of fine person, and commanding manner, and could look a proud defiance when assailed, which often elicited the admiration of his many adversaries. He was a ready but bad speaker, and his contorted and jumbled similes have often been quoted with much ridicule. In the session of 1822, he seemed to be suffering severely from over-exertion and excitement, and on the 12th of August he deliberately terminated his days by a slight incision in the carotid artery. CATHARINE PARR, queen of Henry VIII. 1543, afterw. wife of Sir Thos. Seymour, d. 1548.

CATHARINE DE MEDICI, the only child of Lorenzo de Medici, duke of Urbino, and Madeleine de la Tour, a French princess, sister-in-law of the duke of Albany, was born 1519, and married to the duke of Orleans, afterwards Henry II. 1533. During her husband's lifetime, who was mortally wounded at a tourney, 1559, the political history of Catharine possesses little interest for us. He was succeeded by their eldest son, Francis II., who also died the following year, 1560, when Catharine was named regent of France during the minority of her second son, Charles IX. The great events which now succeeded each other, and which belong to the early history of the reformation, were the battle of Dreux, fought between Guise and Condé 1562; the truce concluded between the rival interests represented by these leaders, 1563; the league of Bayonne formed against the protestants, and the recommencement of the religious war, 1566; the battle of St. Denis, and the death of Montmorency 1567; the battle of Jarnac, and assassination of Condé, 1569; the appearance of the courageous Jeanne D'Albret with her son Henry of Navarre afterwards Henry IV., in the camp of the protestants, and the battle of Mont-Contour, 1569; the peace of St. Germain, to which Catharine submitted under the dictation of Coligni and the protestants, 1570; and the treacherous massacre of St. Bartholomew, 1572.—In 1574 Charles IX. died of the fruits of his debaucheries, and Catharine's third son, who had been elected king of Poland the previous year, succeeded under the title of Henry III., the virtual government of the kingdom still remaining with the queen-mother, who alone preserved it from total anarchy. In 1577 Henry of Navarre was the recognized leader of the protestants. In 1576 the famous catholic league was formed, and the duke of Guise appointed chief of the crusade. In the next year or two, the war had been renewed from one end of France to the other, and the kingdom was threatened with entire destruction by the rival factions. In 1588 Henry of Navarre gained the battle of Contras. In 1588 the people of Paris were in insurrection the states-general were assembled at Blois, and the duke of Guise was assassinated in the palace. In the following year Catharine died. A bare outline of the political complications which produced these events would fill many pages, but they all turn upon the struggle between the catho-

ic and protestant leaders which rent the kingdom to pieces, and the reckless determination with which the daughter of the Medici endeavoured to maintain the royal authority. To estimate her conduct with perfect fairness the character of the age must be considered, and especially the pretensions of a severe Calvinism, its vast network of affiliated societies overspreading France, and the social revolution which it threatened. We have no wish to apologize for the crimes of a Medici, but to understand how they were possible. If a woman without human sympathy occupied the throne of France, can we contrast her cold heart and plotting intellect with an example of Christian meekness and womanly tenderness in the curule chair of Geneva! As we venture to read history, the massacre of St. Bartholomew stamps the period, rather than this single actor in it, with deserved infamy, and when we have said this, enough remains in the Machiavel-like subtlety of her policy, and the dark ambition which did not scruple at the debauchery of her own sons, to justify the hatred of her memory. It should not be forgotten that the lurid colours in which this extraordinary woman has been painted are brightened by commanding talents, and by that taste for art, hereditary in the family of the Medici, which has graced her adopted country with the palace of the Tuileries, and which commenced a new era in arts and literature. CATINAT, NICH., a Fr. marshal, 1637-1712.

CATO, the Wise, or the Sagacious, was a name first given to Marcus Porcius Cato the Censor. I. This extraordinary man was born at Tusculum, a municipal town of Latium, B.C. 234. At the usual military age he commenced his career as a soldier in B.C. 217, the year in which Hannibal was laying waste the north of Italy; and served again under Fabius at the capture of Tarentum (B.C. 209), and under Claudius Nero in the memorable battle on the banks of the Metaurus (B.C. 207). His fame, however, does not rest on his military achievements alone. In the intervals of war he employed himself in cultivating his hereditary farm, adopting the simple habits and manners of the peasantry; and soon became conspicuous among them for superior intelligence, prudence, and sagacity. Having in this way attracted the notice of L. Valerius Flaccus, a young nobleman of considerable influence, by whom his military talents, eloquence, and integrity were duly appreciated, he was induced to remove to Rome; and there, aided by the support of his patron, soon

began to distinguish himself in the forum, and became a candidate for office. Passing through the subordinate offices of quaestor, aedile, and praetor, and exhibiting in these the principles which he had adopted in youth, he was elected consul in B.C. 195, along with his friend and patron Flaccus. In Hither Spain, which was assigned to him as his province, he displayed military genius of a very high order, which speedily reduced the whole country to subjection. In B.C. 191, he distinguished himself greatly in the battle of Thermopylae, and there seems to have finished his career as a soldier. Cato henceforth appears as an active and leading citizen, taking a conspicuous part in every public measure. The great epoch in his life was his election, in B.C. 184, to the censorship, the duties of which he performed with the fearless strictness of an ancient Roman. His unshaken firmness in checking the luxurious habits of the nobles, and in assailing their crimes and vices, exposed him to great obloquy; but he pursued the course which he had prescribed to himself regardless of the consequences. With all his rusticity, Cato was a friend to literature, and was one of the patrons and admirers of the poet Ennius. He applied himself in old age to the study of Greek literature, and is represented by Cicero as an ardent admirer of the historians, philosophers, and orators of Greece. Cato died in B.C. 149, at the age of eighty-five, leaving behind him 150 orations, which were admired for many ages; a work on rural affairs, entitled 'De Re Rustica;' and an historical work entitled 'Origines.'—II. MARCUS PORCIUS CATO, surnamed Uticensis (of Utica), the great grandson of Cato the Censor, was born B.C. 95. Even when a boy, he is said to have given indications of sturdy independence; and as he advanced towards manhood, he displayed that decision, severity, and harshness of character which marked him out from his contemporaries during the remainder of his life. Taking his great ancestor as his model, he adopted his principles and imitated his conduct; strengthening his vigorous constitution by exposure to cold and fatigue, and bearing physical infirmities with a degree of patience worthy of the Stoic philosophy to which he had attached himself. He commenced his military career in B.C. 72, as a volunteer, in the servile war of Spartacus; and afterwards earned a high reputation as a military tribune in Macedonia. After some time spent in the study of his favourite philosophy, and in diligent preparation for the duties of official life, he was elected quaestor for B.C. 65; and acting on the principles which he had prescribed to himself, corrected various abuses which had been sanctioned by his predecessors. As the supporter of Cicero, in B.C. 63 in all his measures for suppressing the Catilinarian conspiracy, he decided by his speech, on the 5th of December, the motion that the conspirators should be put to death. Along with the senatorial party he strenuously opposed the coalition of Caesar, Pompey, and Crassus, in B.C. 60; but the supporters of the triumvirate dexterously removed him from the scene of action by conferring upon him an appointment which called him first to Cyprus, and afterwards to Byzantium. When praetor in B.C. 54, he was exposed to the outrages of the mob, in consequence of his endeavours to put a stop to the bribery and corrup-

tion which prevailed. On the commencement of the civil war in B.C. 49, Cato joined the party of Pompey; and, after the battle of Pharsalia, proceeded to Africa, where the hopes of the republican party were finally extinguished by the battle of Thapsus (6th April, B.C. 46). The town of Utica alone remained in the interest of the followers of Pompey; and Cato, failing to inspire his countrymen who were collected there with courage to endure a siege, resolved not to outlive the downfall of the republic. After providing for the safety of his friends, and instructing them as to the means of effecting a reconciliation with the conqueror, he spent the greater part of the night in perusing Plato's *Phædo*, and then inflicted on himself the wound of which he died in the forty-ninth year of his age. Caesar's estimate of Cato's character is shown by the exclamation which he uttered when he heard of his death: 'Cato, I grudge thee thy death, since thou hast grudged me the glory of sparing thy life!' CAVALIERI, BONAVENTURA, a very eminent Italian mathematician; the pupil of Galileo and friend of Torricelli. Cavalieri's chief work is on the 'Geometry of Indivisibles,' in which he details an artifice by aid of which curve surfaces, &c., may be quadrated. In one respect this method must be reckoned the logical predecessor and herald of the infinitesimal calculus. Cavalieri wrote also on trigonometry, astronomy, and astrology. He died in 1647.

CAVENDISH, THE HON. HENRY, born at Nice 1731, died at London 1810. The father of Mr. Cavendish was Lord Charles Somerset, a cadet of the house of Devonshire. But unlike the class to which his family belonged, the chemist had no sympathies with his fellow-men, either above or below him. He made important discoveries; but when we are acquainted with his history and his self-seclusion, the wonder is that his researches were not more abundant. Compare the millionaire chemist with the poverty-struck, but indefatigable

and noble-spirited Priestley, or with the calm and amiable Black, and we have an intellectual machine contrasted with talent accompanied by humane and generous hearts. 'We start, for soul is wanting there,' Mr. Cavendish was a profound mathematician, electrician, and chemist. Dr. Black, who had discovered carbonic acid, laid the foundation of pneumatic chemistry. Cavendish is usually said to have discovered hydrogen (although it was prepared by Mayow, Boyle, and Hales long anteriorly), and placed the second stone on the great superstructure which was afterwards to be raised by Priestley and others. That common air consisted of oxygen and nitrogen was known; but Cavendish demonstrated (1783) that it consisted by volume of 20.833 oxygen and 79.166 nitrogen—a result which has been thoroughly confirmed by subsequent experiments. He likewise demonstrated the exact constitution of water, although it is confidently affirmed that James Watt at the same time knew its composition, and that his views were known to Cavendish. Cavendish likewise showed that nitric acid is composed of nitrogen and oxygen—Priestley having previously found that electric sparks, when passed through air, turned litmus red, Cavendish added potash to the solution, evaporated, and obtained nitre. While there is scarcely any doubt that there has been a tendency to overrate Cavendish at the expense of others, he must be always ranked as one of the first of English chemists, who has, by the accuracy of his experiments, assisted in laying the sure foundation of the science. [R.D.T.]

CAVENDISH, THOMAS, was the son of a gentleman of fortune in Suffolk. Coming into possession of his father's property in 1585, he applied his ample means to the fitting out of a stout barque of 120 tons, and accompanied Sir Richard Grenville to the West Indies and Virginia. The object is not ascertained; but of a second voyage, on which he sailed in July, 1586, the purpose certainly was to recruit his finances, wasted in personal extravagance, by plundering on the western sea-board of S. America. England and Spain were long at open war, and among men of fortune this practice was not uncommon in the days of Elizabeth, a commission from the queen being previously obtained. He had only 123 men, and three vessels, respectively 120, 60, and 40 tons burden, for the fitting out of which he had to sell or mortgage what remained of his estates; with these he circumnavigated the globe in twenty-five months, making important surveys in Magellan Straits, plundering and burning many towns of the Spanish colonies, and capturing on the coast of California the great annual galleon, 700 tons burden, laden with valuable merchandise, and 122,000 Spanish dollars. He also reduced to its proper length the distance between Java and the Cape, which the Portuguese had made much too great; and reaching home in safety, 'rich enough to purchase a fair earldom,' he was knighted by Queen Elizabeth. His ill-gotten wealth being dissipated in three years, he embarked in a joint-stock expedition of a like kind, but on a larger scale; this proved unsuccessful from disagreement among elements discordant from the first; and while on his return, in 1593, he died at sea of vexation and fatigue, at the age of twenty-nine. He was the first to point out the

importance of St. Helena to the English government. [J.B.]

CAVENDISH, SIR W., a gentleman in the service of Cardinal Wolsey, and afterwards of Henry VIII., by whom he was knighted, 1505-1557. His son of the same name, created duke of Newcastle, distinguished in the civil wars as a royalist, 1592-1676. A descendant of the same name, third earl of Devonshire, and friend of William III., 1640-1707. JOHN, Lord Cavendish, brother of the last named, and chan. of the excheq., d. 1796. CAVOLINI, PH., a naturalist, 1756-1810. CAWDREY, DAN., a controversial wr., d. 1664. CAWTON, THOS., and his son of the same name, both dist. as Oriental scholars, d. 1659 and 1677. Rome 422-432; the second, 1143-1144; the third, 1191-1198; the fourth, eighteen days only, 1241; the fifth, founder of the Celestines, 1294-1296.

CELESTIUS, a heretic of the 4th century.

CELLARIUS, CH., a Germ. savant, 1638-1707.

CELLINI, BENvenuto, a celebrated sculptor and goldsmith, was born at Florence in 1500, and was brought up as a musician (a flute-player) by his father. He entered the service of Clement VII. at Rome, at an early age, as goldsmith and musician; his active services for this pope and other art-patrons in Rome, especially Porzia Ghigi, were altogether suspended by the sack of the city in 1527, by the soldiers of the constable Bourbon, whom Cellini boasts of having killed in the act of scaling the walls. Cellini returned to Rome a few years afterwards, and continued his works for the pope. Cellini executed several designs also in France for Francis I., for the palace at Fontainebleau, but a portion only were carried out. He returned to Italy in 1545 and executed his celebrated bronze of Perseus with the head of Medusa, now in the Loggia de' Lanzi'.—Cellini married at the age of sixty, and died in 1572, leaving two daughters and a son.—Though an able sculptor, Benvenuto Cellini is more distinguished as a goldsmith, or for his ornamental works; he has been long the coryphæus of silversmiths, and until quite recently, was unrivalled as a metal-chaser, but he is now surpassed by several of the modern artists of France, especially M. Antoine Vechte.—Cellini's style is that peculiarly known as the Renaissance, in which scrolled shields or cartouches, and strapwork perform a prominent part; his works are also conspicuous for a minute imitation of natural objects, as in the celebrated silver hand bell made for Clement the VII., formerly in the possession of Horace Walpole. Cellini is the great model to this day of the principal ornamental artists of France.—(See *Cellini's Autobiography*.) [R.N.W.]

CELSUS, AURELIUS CORNELIUS, a physician who flourished in the reign of Tiberius, in the first century of the Christian era. He is distinguished for having bequeathed to his successors in the healing art his work 'De Medicina,' written in elegant Latin, and familiar to every student in medicine. His views are characterized by great judgment and sense, especially when we recollect the barbarism of science in the times in which he lived. He has explained many of the opinions of Hippocrates, which would be difficult of appreciation without his commentary. [R.D.T.]

CERINTHUS, a Jew, and a noted heretic of the first century, who had been taught literature and philosophy at Alexandria. In the age of the apostle John he propagated many absurdities about the person of Christ and a sensual millennium, based on Jewish dreams and Gnostic speculations. His fantastic reveries need not to be repeated. According to some, the fourth gospel was written specially against his tenets, but there is no solid ground for such an opinion, though it has been plausibly defended. [J.E.]

CERVANTES SAAVEDRA, MIGUEL DE, was born in 1547, at Alcala, in New Castile, of an ancient but poor family. His taste for literature seems to have been early developed, and to have been chiefly directed towards poetry. In his twenty-second year, he quitted Spain for Italy, holding a place in the household of a cardinal; and, volunteering in the papal army, he fought bravely in 1571 against the Turks, in the battle of Lepanto, receiving there a wound which lamed his left hand for life. He continued to be a soldier, serving under several leaders, till, in 1576, sailing for the Low Countries, he was taken prisoner by an Algerine corsair. His sufferings and adventures during his three years of slavery in Algiers, are said to be described in his novel, 'The Captive,' inserted as an episode in 'Don Quixote.' On being ransomed in 1580, he resumed military service. In 1584 appeared his first printed work, 'Galatea,' a pastoral romance, mixing prose and verse after the model of Montemayor's 'Diana.' In it he represented, under feigned names, himself and a lady whom he immediately married. He afterwards wrote a considerable number of plays, which have never become famous. About this time of his life his history becomes particularly obscure. He was for some time, at Seville, a purveyor of stores for the Indian fleet; and he is traditionally asserted to have collected tithes in La Mancha. In 1605 he published the first part of 'Don Quixote.' The appearance of this celebrated work of genius speedily made him famous, without, however, rescuing him from poverty, although it brought him some patronage from the court, which drew him to Madrid for the rest of his life. No other work came from his pen for several years. But in 1613 he published the 'Exemplary Novels,' a collection of twelve stories, some of which are the only minor works of his that are at all worthy of the author of 'Don Quixote.' Next year there was printed his 'Journey to Parnassus,' critical and satirical essay in verse. This piece, and the

celebrity of his great romance, provoked attacks on him, of which the most bitter were introduced into a spurious continuation of 'Don Quixote.' This work was at length completed by the appearance of the second part in 1615. It is needless to commend 'Don Quixote'; and this is no place for endeavouring to analyze its character and design. The author did not long survive its completion. He died in his sixty-ninth year, on the 23d day of April, 1616; and Shakspeare died on the very same day. 'Persiles and Sigismunda,' a romance which Cervantes left unpublished, is universal allowed to be unworthy of the liking with which he himself regarded it. [W.S.]

CHABOT, FRANCIS, one of those unquiet malignant spirits raised from the deep by the French revolution, was a Capuchin monk, who abandoned his order when the door had been opened by a decree of the constituent assembly, and was deputed to the legislative assembly, 1791, and to the convention, 1792. His declamatory powers and vehement passions were directed by the most unsparring hatred of royalty, and according to his own declaration, he even offered himself for assassination, that his corpse might be carried through the streets, and the inhabitants of the Faubourgs excited to insurrection. He voted for the king's death without appeal to the people and without delay, and proved himself so shameless in the advocacy of violence and murder, that he has been called the type of sansculottism. Chabot foresaw his fate when the national convention succumbed to the dictates of the Committee of Public Safety, and one day remarked to his compatriots,—"There ought to be a *Côté Droit*, (opposition side.) If none else will form it, I will alone. People say to me, you will all get guillotined in your turn; first, you and Bazire, then Danton, then Robespierre himself. The event proved that these apprehensions were well founded. Chabot had married into the family of an Austrian banker, and from his connection with the financial speculations of his brothers-in-law, was accused of falsifying a decree of the convention. Whether this was true or false, it served equally well as a pretext for his execution. He was conducted to the scaffold after attempting to poison himself with corrosive sublimate, 3d April, 1794.  CHALMERS, THOMAS, D.D., LL.D., the celebrated pulpit orator and divine, was born on 17th March, 1780, at Anstruther, in Fifeshire, of respectable and pious, though humble, parents. After receiving the elements of knowledge at the parish school, he was entered a student in St. Andrews College at the early age of twelve; and soon gave indications of that strong predilection for the physical sciences which he retained through life. He prosecuted the course of study prescribed to students in divinity, and obtained license to preach in connection with the Established Church of Scotland while only nineteen, two years under the legal age, on the express ground that he was 'a lad of elegant parts.' His views towards the church, however, were at this period of his life entertained, not from any ulterior intention of giving himself to the sacred duties of the ministry, but from the belief that the character of a licentiate would advance him in his path to the summit of his ambition—a university appointment. Accordingly, after having been employed about a year as assistant in the parish of Cavers, he relinquished that situation for the more congenial office of assistant teacher of mathematics in the university of St. Andrews. His eminent success in that department procured him a presentation to the parish of Kilmany, the

[Kilmany Church.]

patronage of which was vested in the college, and accordingly he was ordained to the pastoral charge of that place on 12th May, 1803. How subordi-

nate to scientific pursuits he then considered the functions of the sacred office to be, appears from the fact that he spent two successive winters in St. Andrews in giving public lectures during the week on mathematics and chemistry, while he returned to his parish only on Saturdays, leaving it again early on Monday morning. A great and happy change, superinduced by long personal illness and several domestic bereavements, took place in his views of religion. From being a very secondary concern with him, he was brought to regard it as a subject of paramount importance. He now became as assiduous and earnest in his attention to his sacred functions, as he had been formerly negligent of them; and applying his great powers to the illustration and enforcement of Christian truth with all the enthusiasm of a new convert, his fame as a zealous and eloquent preacher spread far and wide. His services were now eagerly sought for other and more important places, and accordingly, after having resided twelve years in Kilmany, he was translated in the summer of 1815 to the Tron Church and Parish, Glasgow. His reputation as a preacher continued rapidly to advance. His church was besieged every Sabbath by crowds of admiring listeners; and a volume of sermons, entitled 'Astronomical Discourses,' enjoyed a circulation as wide as the 'Tales of My Landlord,' published during the same season. On several public occasions he was engaged to officiate both in Edinburgh and London at this period of his ministry, and the sensation universally produced by his preaching surpassed all that was ever known or heard of in the annals of pulpit eloquence. Chalmers had long devoted his attention to the subject of pauperism, on which he entertained some peculiar views as to the superior efficacy of voluntary and Christian efforts in meeting its evils. To enable him to carry his views into operation, the magistrates of Glasgow erected the new parish of St. John's, to which he was presented as first minister, and in which he was allowed the fullest liberty to work his parochial machinery. A number of enlightened Christian laymen aided his efforts; and the scheme in the hands of such an agency met the highest success. But although he wrought it with characteristic ardour, and developed its principles at full length in his 'Christian and Civic Economy of Large Towns,' it never obtained in any other parish, and has long been abandoned as impracticable, even in St. John's. After a most active and successful incumbency for eight years in Glasgow, Dr. Chalmers relinquished the exercise of the ministry for the more retired, but not less useful office of training the rising hopes of the church. In 1823 he became professor of moral philosophy in the university of St. Andrews; and in 1827 he was translated by the unanimous presentation of the Town Council of Edinburgh, to the chair of divinity in the university of that city. The splendour of his fame attracted an unusual number of professional as well as amateur students to his prelections in both of these offices; and the ability as well as learning he brought to bear on the topics of his chair, amply justified his elevation to the highest and most responsible position in the church. Dr. Chalmers now commenced a career of authorship, by which he still further extended his reputation as a divine. The most flattering

honours were heaped upon him from various quarters; for not only was he elected moderator of the General Assembly—the highest position in the Church of Scotland—but he was chosen president of the Royal Society of Edinburgh, created Doctor of Laws by the university of Oxford, selected by the trustees of the earl of Bridgewater one of the eminent writers to publish a treatise in proof of the wisdom and goodness of God in Creation, and appointed corresponding member of the Royal Institute of France—a compliment which no clergyman in Britain had ever previously enjoyed. Dr. Chalmers, who had zealously espoused the popular side in church politics, allowed himself to be prevailed upon, contrary to his own better judgment, to propose the enactment of the veto law in 1833, in the fond hope that it would produce the effect of popularizing the Established Church; and there can be no doubt that it was successful to an eminent extent in realizing his fondest wishes. Never was the church stronger than during its prevalence; and it was on this auspicious period he commenced and carried on his gigantic labours in the cause of church extension. Adhering to the veto act, after the civil courts had decided on its illegality, he mingled in all the stormy controversies which followed; and at length finding it hopeless to maintain the position he had assumed, he seceded in May, 1843, with a large body of adherents who joined him in forming the Free Church. He was the first moderator; and indeed there can be little doubt that his name, which was a tower of strength, and his eloquence, which possessed resistless power over the popular mind, contributed more perhaps than any other cause, to give the new secession a local habitation in the land. Dr. Chalmers's health, impaired by his extraordinary labours,—especially in organizing the new church, sank rapidly, and his death, in 1847, was sudden, and lamented by Christians of all denominations. His collected works, including sermons, theological lectures, &c., amount to 25 volumes. [R.J.]

CHANNING, WILLIAM ELLERY, an eminent member of the society of 'Liberal Christians,' was born on 7th April, 1780, at Newport, Rhode Island, in the United States of America. Though descended on both sides of the house from puritan families, who had emigrated from England, he early displayed a spirit of free inquiry into the doctrines of Christianity—and with the ardour of a young man, conscious of intellectual acumen and energy, he keenly discussed, till he learnt to doubt the leading doctrines of the orthodox faith. Above all, he imbibed a rooted dislike of Calvinism; and gradually extending his scepticism from one portion of the received creed to another, he embraced that system of religion which is distinguished by the rejection of all the peculiarities of Christian doctrine.

rine. He was a firm believer in the truth and Divine origin of Christianity, and had carefully studied it in the inspired records; but he regarded it as nothing more than a more complete and authoritative republication of the law of Nature. Such were the religious principles which Channing adopted; and having become a preacher, his pulpit discourses were characterized by such exhibitions of mental power and impressive eloquence, heightened by rich and beautiful imagery, that he was hailed as a new star in the ecclesiastical firmament of America. Invitations were addressed to him by two vacant congregations in Boston; and after due deliberation, he accepted that of 'The Religious Society' in Federal-Street, where he was ordained on 1st June, 1803. The reputation which Mr. Channing had acquired by his early appearances in the pulpit, he fully sustained by the high quality of his regular ministrations. Week after week a large congregation of intelligent hearers attended his place of worship; where he discoursed on such subjects as charity, war, and peace—the Bible Society missions, benevolent institutions, the anti-slavery cause—and all public measures that tended to promote the advancement of liberty—the progress of social improvements—the dissemination, and the final triumph of Christianity; and to the illustration of these themes he brought all the charms of beautiful diction and a poetical imagination, which led multitudes to hang with rapture on his lips. Mr. Channing was universally acknowledged as the first pulpit orator in America of his time, and accustomed as he was to enter so largely into the discussion of public matters, he acquired a paramount influence in society. In summer 1814, he married his cousin Ruth Gibbs, in whose alliance he enjoyed the purest domestic happiness, and whose active partnership in all his plans and views of public usefulness, contributed in no small degree to the success of his public life. His health having shown symptoms of decline, he was advised in 1821 to try the effects of a voyage; and accordingly he spent a year in travelling through Europe. On his return to Boston with recovered health, he resumed his labours as a preacher, and the course of his life was spent in undeviating devotion to the duties of the pulpit, except only the keen and active part he took in the unitarian controversy, which in 1815 was waged with great fierceness in America. In the course of that contest Dr. Channing—for he had received from Harvard university the title of Doctor in Divinity—gradually advanced from the Arian creed he had hitherto maintained, into the adoption of pure Socinianism. Reports were eagerly circulated, that on his deathbed he renounced these principles and returned to the orthodox faith. But the rumours seem to have been without foundation. He died suddenly, while journeying, at an inn in Bonnington, Vermont, on 2d October, 1842, and was buried in Mount Auburn, where a monument was erected to his memory by his sorrowing people. [R.J.]

CHANTAL, JEANNE FRANCOISE, Madame De, a distinguished pupil of St. Francis de Sales, and grandmother of Madame de Sévigné, was born at Dijon, 1572, and married to the Baron de Chantal in 1592, who died eight years afterwards, leaving her with a young family, to whose instruc-

tion, and the performance of charitable offices to the poor, she devoted her life. She is celebrated for having founded, under the advice of De Sales, the order of the Visitation at Annecy in 1610, and such was her zeal and virtues, that she acquired the reputation of a saint among the common people, and was canonized 1767. She died 1641. In 1660 a volume of 'Letters' by her was published, of which a new edition appeared with a life prefixed in 1823. Her other biographers are the Jesuit Fichet, Maupas de la Tour, Father Beaulais, and the Abbés Marsollier and Cordier.—[*Biographie Universelle.*] [E.R.]

CHANTEREAU, LOUIS, a Fr. antiq., d. 1658.

CHANTREAU, P. N., a Fr. gram., 1741-1808.

CHANTREY, SIR FRANCIS, was born at Norton in Derbyshire, April 7, 1781. He was bound to a carver at Sheffield, but established himself as a modeller in clay, first in Dublin, then in Edinburgh, and finally in London, where he was aided by Nollekens.—Chantrey distinguished himself by his sepulchral monuments, and as a sculptor of busts, and experienced a uniformly successful career; he was elected a Royal Academician in 1816, and was knighted by the queen in 1837. He died on the 25th of November, 1841.—By the disposition of his property, Sir Francis Chantrey has secured a more prominent place in the history of art in Britain, than his mere reputation as a sculptor would have secured him. He left the reversion of the greater portion of his property to the Royal Academy, for the promotion of British fine art in painting and sculpture, including an annuity of £300 for the president, and £50 for the secretary, payable on the 1st of January of every year. The amount available will be about £2,500 per annum, which after the deduction of the salaries of the president and secretary, will leave upwards of £2,000 to be spent annually, on the average, in the purchase of paintings and sculpture executed within the shores of Great Britain, towards the formation of a British gallery of art. The funds cannot accumulate for more than five years, and no commissions can be given to any artists, all purchases must be *bonâ fide* purchases of finished works.—[Jones, *Recollections of Chantrey*, 1849; Holland, *Memorials of Sir Francis Chantrey*, R.A., 1851.] [R.N.W.]

CHARILLUS, a king of Sparta, 8th cent. B.C.

CHARLEMAGNE. This illustrious prince, the restorer of order and obedience in a state of society when only the most commanding talents and heroic steadfastness of purpose could have availed him in a struggle against anarchy and ignorance in their worst forms, was the grandson of Charles-Martel, king of the Franks, and lived 742-814, master of an empire which embraced all France, a part of Spain, more than half of Italy, and nearly all Germany. To feel his greatness adequately it must be remembered that all the ancient landmarks of social order had been overthrown with the colossal Roman power, and that the whole civilized world was covered with its ruins and infested with its crimes. The ancient seat of empire was divided among a score of petty tyrants; the Saracens had overrun Spain and threatened the farther west; the northern kingdoms were only known as the cradle of adventurous armies, whose leaders in after years organized the feudal governments of Europe; Russia did not even exist; and England was just emerging from the confusion of the Heptarchy. Some two centuries before, 507-511, Clovis had founded the Frankish monarchy and established himself at Paris, but his power was that of an absolute military chief, and he was succeeded by a line of phantom-kings, whose action is scarcely distinguishable from that of the barbarous fermentation proceeding around them. At length Pepin-Herstal and his son Charles-Martel, slowly paved the way for a new authority, the former by familiarizing men's minds with justice and goodness in the sovereign, and the latter by his heroic resistance

of the Saracens, and the promise of an irresistible power in the government. The successes of Charlemagne were the natural issue of these circumstances under the command of his ambition, a vast genius, favoured by the compliance of popes; who were willing to encourage a Christian protectorate in the west as a counterpoise to the eastern empire of Irene, and the dreaded power of Haroun-al-Raschid. A catalogue of the principal events and dates is all that we can give in the space to which we are limited. In 768 Charles succeeded to the government conjointly with his brother Carloman; and on the death of the latter, 771, became sole master of France by wisely refusing to divide the authority with his nephew. In 770 he subdued the revolt of Aquitaine. In 772 he marched against the still idolatrous Saxons and commenced a conflict which he maintained upwards of thirty years. In 773 he crossed the Alps, and was shortly crowned king of Lombardy and acknowledged suzerain of Italy by the pope with the right of confirming the papal elections. In 778 he carried his arms into Spain, and pursued his victorious career as far as the Ebro, where he was surprised on his return in the pass of Roncesvalles, where many of his knights perished, among the rest Orlando or Roland, his nephew, the hero of Ariosto. In 780 Louis-le-Débonnaire, his youngest son, was crowned by the pope king of Aquitaine, and Pepin, his second son, king of Lombardy, both at Rome. Between 780 and 788 he visited a terrible retribution upon the Saxons and compelled their chief to accept Christian baptism. Towards 790 we find him establishing seminaries of learning, and doing all in his power to elevate the character of the clergy, the most of whom had hitherto known little but the Lord's prayer; besides engaging in projects for the acceleration of commerce, the general improvement of the people, and the promotion of science. Before the end of the century he had invaded Pannonia, and extended his dominions in this direction to the mountains of Bohemia and the Raab. In 800 he was crowned at Rome emperor of the west, and in 803 was negotiating a union with Irene in order to consolidate the eastern and western empires, when the empress was dethroned and exiled by Nicephorus. From this period to his death, which took place at Aix-la-Chapelle, in the seventy-first year of his age, and the forty-seventh of his reign, he was engaged in fortifying the coasts of France against the Northmen, and various matters relating to the security and the prosperity of the empire, including the settlement of the successors. —In person and manners Charlemagne was the perfection of simplicity, modesty, frugality, and in a word, of true greatness; and though he was much given to the society of women, he had the reputation of a good father, a tender husband, a generous friend. He was indefatigable in all his duties of government, and whether in the camp or the court, had fixed hours for study, in which he took care to engage his courtiers by forming them into an academy. 'For shame!' he exclaimed, to a young man who came before him attired more elegantly than the occasion demanded, — 'dress yourself like a man; and if you would be distinguished, let it be by your merits, not by your garments.' His nearest friend and companion was the illustrious

Alcun, and his fame was so widely spread that the only man, perhaps, of kindred genius in that age, the great caliph, Haroun-al-Raschid, courted his good-will, and complimented him by an embassy bearing presents. Before his death he confirmed the succession in the person of his son Louis, by an august ceremony. Placing the imperial crown upon the altar, he ordered Louis to take it with his own hands, that he might understand he wore it in his own right, under no authority but that of God.—Perhaps we cannot conclude better by way of further illustrating the character of Charlemagne than with his words of advice to this prince:—‘Love your people as your children,’ said he, ‘choose your magistrates and governors from those whose belief in God will preserve them from corruption, and see that your own life be blameless.’ [E.R.]

CHARLES XI., son of the preceding, born 1655, king 1679–97; distinguished as a successful opponent of Christian V. of Denmark, and for his able administration.

CHARLES THE XII. of Sweden came to the throne in A.D. 1697, at the age of fifteen. The rulers of Russia, Poland, and Denmark, despised him as a weak boy, and formed a league for humbling the power of Sweden, and appropriating many of her best provinces. In this crisis the young Swedish king showed a degree of energy and courage that astonished both friends and foes.

He put himself at the head of his army, invaded Denmark, and besieged Copenhagen. This bold stroke forced the Danish sovereign to beg for peace, and abandon the anti-Swedish confederacy. Charles then turned against his other enemies. On the 30th Nov., 1701, with 8,000 Swedes, he attacked and entirely routed the Russian army of 40,000 men at Narva. He then marched across Livonia and Courland into Poland, gained repeated victories over the enemies of his enemy Augustus, (who was elector of Saxony as well as king of Poland,) took Cracow, Warsaw, Dantzic, and other important cities; and in 1704 compelled the Poles to depose Augustus, and choose Stanislaus Lescinski as their king. Charles then advanced into Saxony, which he occupied with his victorious troops, and forced the elector to beg a peace, the terms of which Charles dictated, (1707.) Charles lingered for some time in Saxony at the head of his army, which amounted to 50,000 veterans. The eyes of all Europe were now fixed on him. His numerous victories, his daring and resolute spirit, the bearing and discipline of his troops, filled sovereigns, generals, and statesmen with admiration and anxiety. Louis XIV. earnestly implored his assistance against the arms of Marlborough and Eugene; and Marlborough himself undertook a special embassy to the Swedish camp in order to baffle the attempts of the French to win over the hero of the North to their alliance. Charles himself cherished the most ambitious projects. He was bent, in the first instance, on deposing his enemy, Peter, from the throne of Russia, as he had deposed his other enemy, Augustus, from the Polish throne. One year, he thought, would suffice for the conquest of Russia. He next designed to attack the pope; and he had despatched officers privately into Asia and Egypt, to survey the towns and military resources of those countries, with the intention of entering on a career of Oriental conquest, so soon as he had subdued his European foes. He marched out of Saxony in the autumn of 1707, and entered the Russian territory in 1708. He crossed the Berisina in June, defeated a Russian army that was entrenched near that river, and advanced as far as Smolensko, where he gained another victory, (28th Sept., 1708.) Instead of marching forward against Moscow, Charles now turned to the Ukraine, trusting to the promises of the old Cossack chief Mazeppa, who boasted that he would bring the whole Cossack nation over to the cause of Charles, but who was only able to persuade 7,000 men to join the invaders. Charles wintered in the Ukraine; but he moved forward upon Moscow in the spring of 1709, and besieged the city of Pultowa, where the Russians had collected large military stores. His army had been fearfully reduced by famine, fatigue, and the fatal frosts of Russia, as well as by the numerous skirmishes and actions in which it had been engaged. He had not more than 25,000 men under him at Pultowa, and at least half of them were Cossack and Wallachian recruits. The Russian czar, Peter the Great, advanced to relieve Pultowa with a well-equipped army, 60,000 strong. The decisive battle of Pultowa, fought July 8, 1709, between the rival sovereigns, ended in the total defeat of the Swedes. Charles made his escape from the field with difficulty, and sought

refuge in Turkey, where he was hospitably received and sheltered. He remained there five years during which time his enemies were conquering the best Swedish possessions in Germany and on the east of the Baltic. At length Charles suddenly left Turkey, and joined the scanty Swedish bands that were struggling against the forces of Russia, Prussia, Saxony, and Denmark. After several chequered, though generally unsuccessful campaigns, Charles met his death before the fortress of Frederickshall, in Norway, in the winter of 1718. He was leaning, at night, on a breastwork watching the operations of the siege by moonlight under the fire of one of the enemy's batteries, when a shot struck him on the head, and he died instantly, in the thirty-seventh year of his life, and the twenty-first of his reign. CHATEAUBRIAND, FRANCOIS AUGUSTE, comte De, was born in Brittany, of an ancient family, in 1769. At the age of seventeen he was removed from home to enter the army; but, his regiment revolting, he retired from the service; and after several of his relations had been executed during the reign of terror, he emigrated, returning only for a short time to serve in the invasion attempted by the emigrants under Condé. For several years he resided chiefly in England, paying, however, a visit to the United States, in the course of which he dreamt of discovering the North-west Passage, and gathered among the red men materials for 'The Natchez' and 'Atala.' In this period he published his 'Essay on Revolutions,' in which there were expressed a good many opinions speedily abandoned by their writer, as conceding too much to the spirit of the age.—In 1799, when Buonaparte had overthrown the directory, Chateaubriand returned to France. In 1802 he became one of the most celebrated authors in Europe, by the publication of his 'Genius of Christianity,' ('Génie du Christianisme,') a work which is in every way instructively characteristic both of his merits and his defects. It has no value either theological or philosophical, even for those who regard Christianity, as the writer did, from the Roman Catholic point of view. But it is a work possessing great attractions for those readers who can sympathize with its tone of feeling, and who are not so severe in

taste as to be repelled by its excessive pomp of ornament. It records, with seeming method, but real desultoriness, and with dazzling force of representation, the reflections, and pictures, and emotions, arising in the mind of a man who, though he did not think either profoundly or exactly, possessed a singular fulness of imagination, and was animated by a fervent spirit of religious reverence. Religion, however, interests Chateaubriand most keenly when it is regarded in its relations to literature and art. He exhibits here the same incapacity to apprehend practical realities, which afterwards distinguished his political writings, and his course of political action; and the romantic turn of his elaborate treatise on sacred things is illustrated by the fact, that there was introduced into it as an episode the Indian tale of 'Atala,' subsequently separated from it and receiving the tale of 'René' as a supplement. The 'Génie du Christianisme,' like all the author's other works, is eloquent; but its eloquence is artificial, theatrical, and monstrously strained. It is often pathetic; but its pathos continually tends to degenerate into mawkish sentimentality. Such as it is, however, the ambitious effort displayed an animation and warmth which, breaking in on the recent deadness of French literature, excited universal attention and admiration.—The views which the work expressed were likewise in accordance with the ecclesiastical policy of the new ruler of France; and the imposing character of Napoleon made a vivid impression on Chateaubriand's excitable fancy. He immediately entered the service of the first consul in the diplomatic department. In 1803 he visited Rome as secretary to Cardinal Fesch. He had very soon an opportunity of exercising that courageous integrity by which he was always so honourably distinguished. He had just been appointed minister to the Valais, when, in the spring of 1804, Napoleon sullied his name by the execution of the Duke D'Enghien. Chateaubriand instantly resigned his place, forfeiting, of course, all claims to favour under the empire. In 1806 he set out on those travels to the East, which are recorded in his 'Itinerary from Paris to Jerusalem.' Now likewise he added another imaginative illustration to his 'Génie,' by publishing 'The Martyrs,' a Christian romance of the Roman empire. Afterwards, returning to France, he took no part in public affairs till the fall of Napoleon.—In 1814, while the disposal of the sovereignty of France remained doubtful, he wrote his famous pamphlet, 'Of Buonaparte and the Bourbons.' It is generally allowed that this well-timed appeal did much in diminishing the unpopularity which Louis XVIII. had incurred, by using the arms of foreigners in the recovery of his crown. During the Hundred Days Chateaubriand attended the king at Ghent, and acted as his foreign minister. After the battle of Waterloo, he received a seat in the Chamber of Peers, and a nominal appointment as a minister of state. But he held no actual office under the ultra royalist ministry, which was the first after the restoration. He came into place with the more liberal administration of Villèle. In 1821 he was ambassador in London. In 1822 he was one of the two plenipotentiaries of France at the Congress of Verona; and in his History of it he claims the credit of having

been the real instigator of the French invasion of Spain. Next year he had, as minister of foreign affairs, the satisfaction of directing the ill-advised expedition undertaken in consequence of that resolution of the Congress. He remained in private life during the arbitrary reign of Charles X., excepting that, in 1828, he was appointed ambassador to Rome, but resigned immediately when Polignac was placed at the head of the administration.—On the revolution of 1830, Chateaubriand delivered in the Chamber of Peers an oration, in which he advocated strongly, but by no means on high monarchical grounds, the claim of the Duke of Bourdeaux to the throne. This was his last appearance in public life. On the election of Louis Philippe, he refused to take the oaths, resigned even his pension as a peer, and occupied himself thenceforth in literary labours. These were now necessary for his support, his whole property having been spent. Most of his writings during this period of declining age, such as his 'Sketches of English Literature,' are of small value. His chief employment was the composition or completion of his voluminous 'Memoirs from Beyond the Tomb,' ('Mémoires d'Outre Tombe;') and the right of publishing these after his death was sold by him for a large life annuity. They exhibit an amount of vanity and egotism almost unparalleled; but they are full of interesting details, and have very much of his peculiar kind of eloquence. Chateaubriand died at Paris in the summer of 1848, when he had almost completed his eightieth year. [W.S.]

CHATHAM, WILLIAM PITT, earl of, was the second son of Robert Pitt of Boconnoc, in Cornwall, where he was born on 15th November, 1708. His family was extensively connected with the higher English country gentry, and his grandfather,

William Pitt, governor of Madras, was the owner of the celebrated Pitt diamond. Young Pitt studied at Trinity College, Oxford, and on leaving the university he obtained a cornetcy in the Blues. Walpole afterwards, following his relentless system of party warfare, deprived him of his commission. Perhaps this act entirely altered his destinies, since he possessed qualities that, had he remained long enough in the army to have felt an interest in his profession, might have developed great powers of military command. He entered parliament for the family borough of Old Sarum, in 1736. He immediately joined the opposition, which placed the name of the Prince of Wales at its head. The most eminent of his early speeches were delivered in that last effective attack on Walpole, which, in 1742, drove him from power. They are said to have been brilliant and astounding efforts of oratory, but the usual versions of them are so steeped in the antithetic mannerism of Johnson, who professed to report them for the 'Gentleman's Magazine,' that it is impossible to know how far they are genuine; while other reports, professing to be verbatim, do not justify the high reputation of these earlier efforts. His opposition to the government did not cease with the fall of Walpole. His bold declamation, so much in contrast with the personal and narrow party discussions which then occupied parliament, drew a substantial token of admiration from a kindred spirit, Sarah, duchess of Marlborough, who bequeathed him £10,000. On the other hand, the king had a thorough dislike to him, as a person whose opposition was not of that usual kind which mere tries to remove a ministry and occupy their place but which aimed at a political power independent of, if not above, the throne. The Pelhams, however, saw the great importance of adding his strength to their ministry, and in 1746 the king unwillingly submitted to his appointment first to a subordinate place, and immediately after to the lucrative office of paymaster-general. The same haughty self-reliance which he had shown in opposition distinguished him in office, and it served to restrain him from drawing on those many sources of irregular emolument which were then attached to official power. His marriage, in 1751 with the sister of George Grenville, opened to him a new political connection. In 1755, he was dismissed, along with his brother-in-law, but in the ensuing year it was found necessary to bring them both back to a cabinet of which Pitt was virtually the head. In 1757, an attempt was again made to dispense with the services of the 'great commoner,' but after the country was two months at a half without a government, he returned with greater power than ever. It was then that, backed by national enthusiasm, he conducted the brilliant operations which paralyzed France and drove her fleets from almost every sea. On the accession of George III. he was superseded by the royal favourite Lord Bute. Various overtures were made to him to join or form a ministry, and in 1766 he undertook the latter function, choosing, to the surprise of the world, a sinecure place for himself, and a seat in the upper house. Repeated attacks of gout from an early period of life downwards, had injured both his constitution and temper. He resigned office in 1768. Opposed to the taxati-

of America, he was, on the other hand, indignant at the proposed abandonment of the colonies, and it was while exhorting the House of Lords against the measure that he was seized with a fit from which he never recovered, dying in a month afterwards, on the 11th of May, 1778. [J.H.B.]

 CHATTERTON, THOMAS, born at Bristol in 1752, was the son of a poor schoolmaster, who died a little before his birth. After having spent some years in a charity school, he was articled to an attorney in his fifteenth year. He was not quite sixteen when he published in a Bristol newspaper the first of his extraordinary forgeries, being an account of an ancient procession, which, on being questioned, he alleged to have been found in the charter-room of the church of St. Mary Redcliffe. He next exhibited specimens of old poetry, which he asserted were written in the fifteenth century, by a priest named Thomas Rowley. At the same time, pieces, both in prose and verse, which were avowedly his own, appeared in London magazines; and these, by their singular force and originality, showed him to be quite capable of having concocted the supposed antiques. Indeed, wonderful as was the circumstances, the antiquarian and other knowledge which he wasted on his impostures, their spuriousness was at once evident to the few who were competently familiar with the Old English language and history. The poet Gray, and his friend Mason, unhesitatingly denounced the imposition, when some of the poems were sent to them by Horace Walpole. The best imitation of the antique, is perhaps the minstrel's song inserted in the tragedy of *Ella*; but everywhere there is evidence of genius which, if it had been guided by good intention, and fostered by mature study, could certainly have given birth to poetical masterpieces. But perversity of principle was manifest alike in the unhappy boy's writings, and in his

conduct. He extorted a release from his master before he had served him for three years; and immediately sought and found literary employment in London, busying himself chiefly with political and satirical writings. A very few months of toil, ill remunerated, and disappointments in his expectation of patronage from the great, drove his undisciplined mind to despair. He became indignant to the verge of starvation, and poisoned himself in August 1770, when he wanted some weeks of completing his eighteenth year. [W.S.]

[Charter Room, St. Mary Redcliffe, Bristol.]

CHAUCER, GEOFFREY, the father of English poetry, lived in the fourteenth century, one of those periods which are most important and interesting, both for the history of the nation and for that of our native literature. The sovereigns of England in his time were Edward III. and Richard II.; Wicliffe, his contemporary, to whose opinions, in regard to ecclesiastical polity, Chaucer was inclined through his connections at court, was beginning to undermine the rule of the Church of Rome; the language of the people was now, for the first time, so far developed as to be a fit organ for literary composition, both in prose and verse; and, while the romances and other poems of France were still the favourite models of poetry, higher aims and greater correctness of execution were taught by the Italian masterpieces of Dante, Petrarch, and Boccaccio.—Nothing is known as to Chaucer's parentage, and hardly anything as to the events of his youth. He was born about 1328, probably in London, and is said to have been educated at both universities, and to have also studied law. Very early he obtained public employment, attaching himself to Edward's son, John of Gaunt, 'time-honoured Lancaster.' The second wife of this prince, who had already been his mistress, is believed to have been the sister of Chaucer's wife. In 1359 the poet served, and was taken prisoner, in the king's invasion of France; and besides discharging other foreign missions, he was sent to Genoa in 1373, a journey which is supposed to have given him an interview with Petrarch. Among other offices which he held in the course of this reign, was the comptrollership of customs in the port of London; and a pension, with a grant of a daily pitcher of wine, has been erroneously referred to as constituting an appointment as poet-laureate. He likewise received a house in the royal demesne of Woodstock; and there most of

his later works are traditionally said to have been composed. In the disturbances which arose after 1377, when the feeble Richard II. succeeded to the throne, Chaucer was implicated; and he is said, on doubtful authority, to have been at one time a fugitive to the continent, and at another a prisoner in the Tower. In 1386, however, he was knight of the shire for Kent. He died in London in 1400, soon after the accession of Henry IV., the son of his early patron. One of his sons became speaker of the House of Commons, and the other married a daughter of the ducal house of De La Pole.—Chaucer deserves commemoration as one of the very earliest of those who wrote prose in a language which can properly be called English. But his compositions of this sort have little value for any but the philologist. His minor poems, also, although they would secure his name from neglect, would cause him to be remembered only as one of those who improved most actively a kind of poetry, borrowed in the main from the allegoric and chivalrous fancies of the French, and cultivated for several generations before his time. Some of his works are free translations, or loose abridgments. Such are the 'Romance of the Rose,' from the French; the 'Troilus and Cressida,' from the Italian of Boccaccio; and 'The Legend of Good Women,' derived from the epistles of Ovid. Among his original poems, 'The House of Fame,' and 'The Flower and the Leaf,' are very fine in themselves, and have received injury, not improvement, in the modernized paraphrases of Pope and Dryden.—Chaucer's claim to immortality, as one of the greatest of English poets, and as a poet essentially and strikingly original in spite of many borrowings in detail, rests on his 'Canterbury Tales.' These are currently said to have been all written after the poet's sixtieth year. But there is reason for suspecting that many of the pieces may have been composed before; and that we are not entitled to assign preemptorily to his old age anything be-

yond the collection of the stories into a series, and the writing of that introduction to them which is certainly the best part of the work. This introduction is described as the Prologue. It relates how a band of pilgrims, bound for the shrine of Saint Thomas à Beckett at Canterbury, meet at the inn of the Tabard in Southwark; and how

they agree to relieve the weariness of the way by the telling of stories. The portraits of the pilgrims are among the most admirable things in the whole range of poetry: they are equally good for their delineation of character, for their variety and depth of serious sentiment and arch humour, and for a pointed strength and aptness of language which, antiquated though the diction is, may be understood by every well-educated reader with very little study. Similar excellencies belong to the Tales which follow, and which, breaking abruptly, leave us to suppose that the design was not more than half completed. The humorous tales are coarse and sometimes immoral, yet felicitously humorous: some of the serious ones are in every way beautiful. The 'Knight's Tale,' telling in chivalrous guise the adventures of the Greek knights Palamon and Arcite, has aptly been called the *Iliad* of Old English literature. [W.S.]

CHAUMETTE, PIERRE GASPARD, one of the vilest scoundrels by whom the French people were maddened in the period between 1789 and 1794, was the son of a shoemaker, and before his advent as a street orator and journalist, had run through a career which seems to have perfected him for every species of villany, as a cabin-boy, schoolmaster, a lawyer's clerk, and a novice in convent. He was born in 1765, and began his public career in one of the low clubs. In 1789 he edited a journal entitled 'Les Révolutions de Paris.' In 1792 he was elected 'procureur-syndic,' or attorney, for the commune of Paris, at which occasion he formally renounced his christian name, and declared that he took that of Anaxagoras, 'a saint who had been hung for his republicanism.' He was the virtual chief of the 'Hébertists,' the inventor of the Feast of Reason, and the high priest who officiated at the worship of the demoiselle Candeille in the cathedral Notre Dame. His brutal character may be judged from the fact that he presented the prince dauphin with the model of a guillotine for a plaything, at that the revolting questions put by Hebert to the queen originated in his obscene imagination. His features were abject, yet marked by insolence; and his style of address, to judge from the specimen which have been preserved, was characterized by the vilest claptrap, and insolent use of apotrophe. There is reason to believe that he plotted the destruction of the entire body of the convention along with that of the Girondins. It became his boast that 'he knew the suspect in the street by the very face of them.' The prisons of Paris were filled with his victims, and the violence and immorality of his party were so extreme, that the Committee of Public Safety could not be in-

ible to the danger which threatened the republic from this quarter. Robespierre watched his opportunity, and these wretched panders to the worst vices of the people were sent to the guillotine on the 24th of March, 1794. [E.R.]

CHERUBIN, a Fr. astron. and math., 17th ct.

CHERUBINI, LUIGI CARLO ZENOBIO SALVADORI, founder of the French Conservatory and instructor of thousands of eminent musicians, was born at Florence on the 8th of September, 1760.

He commenced his musical studies at nine years of age, first under Bartolomeo and Alessandro Felici, father and son, and afterwards under Bizarri Casrucci, and last under Sarti at Bologna, from whom he derived the greatest benefit. At thirteen years of age he wrote a mass which gave ample promise of his future eminence as a composer. From this time till 1778 he wrote a great number of works in various styles, and all successful.

During the time he was a pupil at Bologna, some of Sarti's most celebrated operas were produced, and two of these, 'Achille in Sciro,' and 'Giulio Sabino,' were afterwards acknowledged to have been almost entirely from the pen of Cherubini. In 1784 Cherubini came to the Italian Opera at London, where he remained two years, and produced his operas 'La Finta Principessa,' and a rewritten version of his 'Giulio Sabino,' both of which were successful. In 1786 he went to Paris, which became thereafter his adopted country. In 1788 he visited his native country and produced his 'Iphigenia in Aulida.' He never went to Italy again. Soon after this he brought out his 'Demophoon' in Paris, which from various causes proved a failure. In 1791 Cherubini brought out his opera of 'Lodoiska' at the Theatre Feydeau, which, though it established his reputation as a first-rate composer, was, however, swamped by Kreutzer's more popular opera of the same name. In 1794 he brought out 'Eliza,' in 1797 'Medea,' in 1798 'l' Hotellerie Portugaise,' in 1800 'Les Deux Journées,' in 1803 'Anacreon,' and in 1804 his ballet 'Achille à Scyros.' His fame, which had now spread far and wide, led to an invitation to

Germany, whither he went in 1805, and produced his opera 'Faniska' at the Imperial Theatre of Vienna. During his sojourn all his most favourite works were brought out, and became quite the fashion with the German people, and the great musician of Germany, Beethoven, when he heard the 'Faniska,' said Cherubini was the first dramatic composer of his time, and Haydn embraced him, and called him his son. In 1809, having returned to Paris, he produced his opera of 'Pygmalion,' in 1810 'Le Crescendo,' in 1813 'Les Abencerrages,' the promising career of which was shortened by the news of Buonaparte's retreat from Moscow. In 1815 Cherubini was invited by the Philharmonic Society to come to London, which invitation he accepted, and composed an overture, a symphony, and a grand concerted vocal piece, all of which were performed under his own direction in the concerts of that society. On his return to Paris, the dynastic and musical changes had so materially affected the position and prospects of Cherubini, who was of far too independent a temperament to become a courtier, that he retired from some of his situations in disgust. He was, however, soon recalled, and was appointed composer to the king's chapel and professor of composition at the L'Ecole Royale, (of which institution, in 1822, he was appointed director,) and was elected a member of the Academy of the Fine Arts. These appointments were considered all the more honourable to Cherubini, as he had never condescended to become a flatterer of royalty, and as because of the independence of his character he had received insults and indignities from Napoleon. In 1833 he composed his grand opera 'Ali Baba,' which was well received in France, but did not long keep the stage. In 1835, in consequence of the ecclesiastical authorities having forbidden the employment of female voices in the service of the church, it was impossible that Cherubini's grand requiem could be performed at the funeral of Boildieu. He then, at the advanced age of seventy-six, undertook to compose a requiem for male voices only, which was his last composition, and was chosen as the one which should be performed at his funeral obsequies. Shortly before his death, he resigned the office of Principal of the Conservatory of Music, of which establishment he had been the head for twenty years, and with which he was connected for forty-eight years; and a month before his demise, which took place on the 15th of March, 1842, he was invested with the grand cross of the Legion of Honour. Cherubini's fame as a composer of instrumental and operatic music is world-wide, but his reputation with future ages will rest chiefly on his sacred compositions. Cherubini was a good man, as he was a great artist. Thoroughly independent, he spoke fearlessly as he felt, and he was loved and venerated by his pupils and all who belonged to the large circle of his friends. [J.M.]

CHESELDEN, R., an English surgeon, d. 1831.

CHESTERFIELD, PHILIP DORMER STANHOPE, earl of, son of the third earl, was born in 1694. After studying in his youth with a zeal of which afterwards he thought proper to be ashamed, he learned on the continent his polished smoothness of manners, his love of gaming, and his loose code of morality. He entered public life in 1715, soon after the accession of George I. In

the course of this reign he distinguished himself in the House of Commons as an exceedingly skilful and effective debater; and he supported his reputation when his father's death transferred him to the House of Lords, shortly before the prince of Wales, to whose party and household he had belonged, succeeded to the throne as George II. From this time till 1748, when deafness and other infirmities compelled him to retire from public life, Lord Chesterfield took an active part in the petty intrigues and party squabbles which make up the parliamentary and court history of the reign. His diplomatic skill was made useful in two foreign embassies; and his lord-licutenancy in Ireland, beginning in 1745 and lasting only a few months, has always been mentioned with distinguished praise. After a sickly and melancholy period of old age, he died in 1773. The only writings of this accomplished person that are at all remembered, are his 'Letters' to his natural son, remarkable for their ease of style and their knowledge of society, but notoriously reprehensible for the principles of conduct which they inculcate. CHRYSIPPUS, a Stoic philosopher, 2d c. B.C.

CHRYSOSTOM, JOHN, was born at Antioch about the year 351, and was the son of Secundus, a military officer on the staff of the Roman governor of Syria. While the son was yet an infant, his father died, but the widowed mother devoted herself with intense energy to her son's education. Having studied under Libanius and others, with view to his being placed at the bar, where he practised for a short time with considerable promise, he, his twentieth year, embraced a monastic life. Sor short time afterwards he was ordained deacon, and

egan to publish. He was not ordained presbyter, and did not preach till about his fortieth year. Many of his most famous homilies, such as those in the 'Statutes,' were preached at Antioch, and his growing fame soon led to his translation to the see of Constantinople in 398. His vigorous prosecution of radical reform among the clergy, his fidelity in rebuking offenders of the highest class, even the empress, and his own sternness of resolution, made him an object of jealousy and dread. An irregular council condemned him in 403 upon the most flimsy grounds, and upon his refusal to submit, he was arrested and sent to Nice in Bithynia, but he had scarce arrived at his place of exile when he was recalled, for fear of an insurrection, and his return had all the appearance of a popular triumph. But the empress was again provoked, and the patriarch was again banished, first to Cucusus in the mountains of Tauris, where he busied himself in instructing the pagan natives, and then to Pityus, on the bleak borders of the Black Sea. In travelling to the latter place, he reached Soman, and died about the age of sixty. Thirty years after his death his body was brought back to Constantinople, and his bones at length found repose beneath the shadow of St. Peter's at Rome, where the Sistine choir daily chaunts its requiem over his ashes. It is not to be denied that the 'golden mouth' was occasionally impetuous and self-willed, but he bore his misfortunes with manly piety and fortitude. The faults of his style lie upon the surface of it, in its florid exuberance and continuous accumulation of metaphors. His rhetoric sometimes over-laid his logic. Yet the effects of his eloquence were prodigious, his thrilling appeals went at once to the heart. His conceptions are all painted—ideas start up as images, and his orations resemble a crowded panorama. The humble conventicles of Syria heard the same gospel which at length rolled in glowing periods beneath the great dome of St. Sophia. Splendour of intellect, mellowness of heart, and gorgeousness of fancy, characterize all his sermons, expositions, orations, and letters. He has left behind nearly a thousand homilies, sermons, or expositions, still of great value to the interpreter, besides some polemical writings, tracts on monasticism, and a treatise 'on the priesthood.' The best edition of his works is that of Montfaucon in 1718-38, and in 13 folios. [J.E.]

CHURCHILL, CHAS., an English poet, eminent for the keenness of his satire, and equally noted for the laxity of his morals and love of pleasure, was ordained a priest in the Church of England, but first disgraced, and then contemptuously abandoned his clerical character. He was born 1731, and as early as 1761 had placed himself in this equivocal position. His poems were all written in the short interval between 1760 and 1764, when he died. Though his productions are highly praised for the humorous and effective character of their composition, it is as impossible to regard them with unqualified approbation, as to admire the character of the author.

CIBBER, COLLEY. The life of this comedian has been written by himself, and forms one of the liveliest of autobiographies;—a work sufficient to disprove of itself the charge of being a dunce brought against him by Pope. Mr. Colley Cibber was born, according to his own account, on 6th November, 1671, in Southampton-Street, London. His father, Cains Gabriel Cibber, was a statuary, and native of Holstein, who came into England some time previous to the restoration. 'The basso rilievo,' says his son, 'on the pedestal of the great column in the city, and the two figures of the lunatics, the raving and the melancholy, over the gates of Bethlehem Hospital are no ill monuments of his fame as an artist.' When ten years of age (1682) Cibber was sent to the free school of Grantham, Lincolnshire, where the boy appears to have shown the same giddy negligence that marked the man; and to have unconsciously made enemies by an inveterate habit of jesting, besides the envy exercised by his literary progress. We may form some idea of his provoking humour from what occurred in 1730, when he had recently received the laurel, and there was so much discontent expressed that it should be conferred upon a comedian. The 'public papers were enlivened with ingenious epigrams, and satirical flirts,' on the occasion. The witty author entered the lists against himself, and published a doggerel copy of verses in the *Whitehall Evening Post*, in which he lampooned himself. His vanity, as well as his vivacity, had much to do with this strange conduct. But the former is the actor's foible, and must be put up with. Previous to choosing the stage for a profession, Cibber had the offer of several chances for the church, the court, and the army; but notwithstanding the prejudices of his father, he preferred the boards. The famous year, 1688, witnessed this important revolution in the state of our author's private affairs. At the time that Cibber joined Sir William Davenant's company (1690), the principal performers were Betterton, Montfort, Kynaston, Sandford, Nokes, Underhil, Leigh, Mrs. Betterton, Mrs. Barry, Mrs. Leigh, Mrs. Butler, Mrs. Montfort, and Mrs. Bracegirdle.—'all' as Cibber calls them, 'original masters in their different styles; not mere auricular imitators of one another.' At this period, it was not customary to pay young actors during their probation, and it was three quarters of a year before young Cibber became entitled to ten shillings a-week. By the time that he received double that salary, he ventured on matrimony. Necessity soon made him a poet. Fortune had begun to smile on his new career. By the recommendation of Mr. Congreve, he had the honour of acting before Queen Mary in one of Kynaston's parts. His next step was the production of a prologue, which was accepted and spoken. *Alderman Fondlewife*, in the play of 'The Old Bachelor,' next afforded him an opportunity of astonishing his fellow-performers, though he received small encouragement from them. The expediency of writing a part for himself led to his composing the comedy of 'Love's Last Shift,' which

was produced on the boards in January, 1695, and in which he acted the character of Sir Novelty. Still Cibber won his way but slowly with the actors; and even up to the end of his career had not secured their full faith in him. His talents were at least of the versatile order, for he not only performed the fops and coxcombs of comedy, but Iago, Wolsey, Syphax, and Richard III. in tragedy. But the performance of vicious characters he seems to have considered injurious to his reputation.—Owing to the censure of dramatic poets, by Jeremy Collier, in his ‘Short View of the Stage,’ the master of the revels became cautious in granting licenses to new plays. Nevertheless, Cibber contrived to get on pretty well; his muse and his spouse, to use his own words, ‘being equally prolific, that the one was seldom the mother of a child, but in the same year the other made him the father of a play.’ ‘I think,’ he adds, ‘we had a dozen of each sort between us, of both which kinds some died in their infancy, and near an equal number of each were alive when we quitted the theatre.’ ‘The Careless Husband’ has always been reckoned Cibber’s best play. ‘The Nonjuror,’ however, was the most popular, owing to its political character. It was levelled against the Jacobites, and was the reason, in fact, of Cibber’s being made poet-laureate in 1730, when he quitted the stage. He died in 1757. His ‘Apology,’ from which we have derived the materials for his life, is an exceedingly amusing work. His works fill 5 vols. 12mo, published in 1760. [J.A.H.]

CIBBER, THEOPHILUS, son of the celebrated comedian, and like him an actor and play-writer, was a man of profligate character, and very inferior talents, 1703–1758. His second wife, SUSANNAH MARIA CIBBER, was a sister of Dr. Arne, and often performed with Garrick as a tragedian; 1734–1766.

CICERO, MARCUS TULLIUS, was born at Arpinum, an ancient city of Latium, in B.C. 106; the same year which gave birth to Pompey. The great aptitude for learning which he displayed in boyhood induced his father to remove to Rome, where the future orator and statesman was educated under the best masters of the time. In B.C. 89 he served his first and only campaign under Pompeius Strabo, the father of Pompey, who was then engaged in the Social war. Having thus complied with the custom of his age, Cicero

devoted the next six years to the studies which were necessary to raise him to distinction as a lawyer and an orator; practising declamation in Latin and Greek, and storing his mind with those precepts of philosophy, which, throughout his eventful life, cheered him amidst professional toils, and consoled him under disappointment and persecution. At the age of twenty-five he came forward as a pleader, and, even at the risk of incurring the displeasure of Sulla, defended clients who were obnoxious to the dictator. But his health, which was naturally feeble, gave way under incessant application to study; and, for the purpose of invigorating his constitution, as well as correcting certain defects in his style of oratory, he visited Athens (B.C. 79,) made a tour of Asia Minor, and for some time resumed his studies at Rhodes, under Molo, from whom he had received instructions at Rome. After an absence of two years, he returned to Rome with renewed health and enlarged knowledge, and speedily placed himself at the head of the Roman bar. Being qualified by law at the age of thirty to become candidate for the lowest of the great offices of state, he was elected *quaestor* in B.C. 76, and obtained each of the higher offices as soon as he was permitted by law to hold it, reaching the consulship in B.C. 63. During his consulship he was called upon to grapple with the famous Catilinarian conspiracy, and the courage, prudence, and decision which he manifested in directing the difficult and complicated investigations that led to the detection and punishment of the conspirators called forth the encomiums of all classes of the citizens. The public enthusiasm heaped upon him unwonted honours: in the senate and in the forum he was saluted as *parens patriae* (the father of his country); thanksgivings in his name were voted to the gods; and all Italy united in testifying their admiration and gratitude. But his unexampled good fortune had excited the jealousy of many of the leading nobility, and his irrepressible vanity exposed him to the ridicule and assaults of his enemies. He was accordingly destined soon to experience a reverse of fortune as remarkable and more sudden than his rise. It had been judged necessary to put to death five of the ringleaders in the conspiracy; and though this was done in virtue of the dictatorial authority which the consuls were invested by the senate, and with the consent and approval of that body, Cicero was indicted for having put a Roman citizen to death untried, and forced to go into banishment in April, B.C. 58. But private malice soon expended itself, and public feeling, reverting to his signal services in rescuing his country from impending ruin, recalled him after an interval of seventeen months. His reception at Rome cheered his dejected spirits; but the circumstances which led to his banishment prevented him from ever after recovering his former position. In B.C. 49 he was admitted a member of the college of Augurs, and towards the end of B.C. 52 he was appointed proconsul of Cilicia. He administered the affairs of his province with the strictest impartiality, corrected the abuses which had been introduced or sanctioned by his predecessors, and realized in practice the precepts which in his writings he had inculcated. He returned to Italy

c. 49, at the commencement of the civil war between Cæsar and Pompey, and finally resolving to espouse the cause of the latter, followed him toreece. After the battle of Pharsalia, B.C. 48, at which he was not present, he again returned to Italy, and was received into favour by Cæsar. Separating himself now entirely from all parties in the state, he arranged and published during the next three years nearly all his most important works on rhetoric and philosophy. But the tumults excited by Antony after the murder of Cæsar, B.C. 44, again drew him from his seclusion; and Augustus, knowing the value of such an ally, did carefully concealing from him his real intentions, gladly availed himself of his services as leader of the senate. Cicero's zeal, which was not always tempered with discretion, now exhibited itself in the famous philippics against Antony, which again made him the idol of the Roman people. But the formation of the second triumvirate sealed the fate of the great Roman orator. His name appeared in the list of the proscribed, having been placed there by Antony as one of the conditions of the league; and after an unsuccessful attempt to escape, he stretched forward his head to his executioners, and called upon them to strike (B.C. 43). His head and hands were conveyed to Rome, and, by the orders of Antony, nailed to the Rostra. We have not space to delineate the character of Cicero, or to enumerate his works. These have been repeatedly published, both in mass and in detached portions. [G.F.]

CICOGNA, PASCAL, doge of Venice, 1195.

CICOGNARA, LEOPOLD, a painter, 1767-1834.

CID, THE. DON RODRIGO LAYNEY (often called, by his countrymen, by the abbreviated appellation *luy Diaz*,) was born at the paternal castle of Bivar, in Castile, about the year 1026. He was of the purest Gothic blood; but his family possessions were small; and he was indebted to his own valour and martial genius for the renown and importance which he acquired. His military career against the Moors of Spain was commenced under the banners of Don Ferdinand, king of Castile; and he soon became celebrated throughout Europe as the model of Christian chivalry. Five Moorish kings, whom he defeated and took captive, and to whom he generously granted life and liberty, bestowed on him the title of *Es Sayd*, (i.e., my lord); whence arose the name of the *Cid*, by which he is best known in poetry and in history. Don Sancho, who succeeded Ferdinand on the throne of Castile, made the *Cid* generalissimo of his armies; whence came the title *Campeador*, by which also the hero is often named by his countrymen. Under the next sovereign, Alfonso VI., the *Cid* was frequently the mark of unmerited royal jealousy; and he was more than once banished from Castile. On these occasions he took refuge with some of the Moorish princes of the peninsula, where he served gallantly in their wars with one another. But his loyalty to Castile was unblemished; and when recalled by the capricious Alfonso, the veteran *Campeador* combated for him as zealously as he had fought in his youth for more generous and grateful sovereigns. Among many other achievements, he is said to have wrested the city and kingdom of Valencia from the Mahometans, and to have annexed it to the Castilian

dominions. The reputed year of his death is 1099. His tomb is still shown at Bivar; and his countrymen, after so many centuries and so many changes, still speak of him with enthusiastic pride. His victories and his romantic personal adventures furnish the themes of many of the finest old Spanish ballads; and they are also narrated in the 'Poem or Chronicle of the *Cid*,' the earliest great poem of modern Europe, which is supposed to have been framed about fifty years after the hero's death, from an original chronicle written in Arabic by two Moorish pages of the *Cid*. CIMA, J. B., an Italian painter, 15th cent.

CIMABUE, GIOVANNI, commonly called the father of modern painting, was born at Florence in the year 1240. The prominence given to the name of Cimabue in the history of painting in Italy, is due solely to the place he has in the 'Lives of the Painters, &c.,' by Vasari, whose work is the great text book on this subject, as far as relates to the revival of painting in Italy. Cimabue possessed more than ordinary merit in his time, but was little if at all superior to his reputed master Giunta of Pisa, whom he is supposed to have assisted in the church of San Francesco at Assisi in 1253. Cimabue had several other able contemporaries, as Margaritone of Arezzo, Duccio di Buoninsegna of Siena, and Gaddo Gaddi of Florence; all, including Cimabue himself, strictly belonging to the Byzantine school of painters. Many Greek artists were established in Italy in the thirteenth century, especially at Venice, Pisa, and Siena; the event which brought the eastern and western civilization into more immediate contact at this time, was the Latin conquest of Constantinople in 1204.—The pictures of this time were executed in *tempera*, and have generally gold grounds: there is still a large picture of the Madonna, by Cimabue, preserved in the church of Santa Maria Novella at Florence; and there is another of the Madonna and Child in the academy of Florence. Cimabue was still living in the year 1302. He was the master of Giotto, whose ability he discovered and cultivated.—[Vasari, *Vite de' Pittori*, &c.] [R.N.W.]

CLAIRAUT, ALEXIS CLAUDE, a French mathematician of great genius, of the times of

Euler and D'Alembert. He was born at Paris in 1713, and died in 1765. Clairaut wrote on the figure of the earth, and on curves of double curvature, besides many separate memoirs and elementary works on algebra and geometry. In his time he belonged to the 'great world' of Paris: the thorough student will read his writings still; he had much taste in composition as well as great analytic power.

CLAIRFAIT, COUNT DE, an Aust. gen., d. 1798.

CLAPPERTON, HUGH, was born in 1788, at Annan, in the county of Dumfries, where his father practised as a surgeon. After having entered the merchant service, and made several voyages to America, he was impressed on board a man-of-war. By the influence of an uncle, a captain in the marines, young Clapperton soon attained to the rank of a midshipman; and some time after, while on service in Canada, to that of lieutenant. He gained, in various actions, the reputation of a skilful and brave officer. Being at home on half-pay for five or six years, he became acquainted, at Edinburgh, with Dr. Oudney, then engaged in plans of African discovery; and was soon after associated, under the directions of Earl Bathurst, with this gentleman and Major Denham in an expedition to the sources of the Niger. They crossed the desert from Tripoli to Lake Tchad, which they were the first Europeans to visit, reaching it on 5th February, 1823. Here our travellers separated for a time; and Clapperton explored the country to the S. W. as far as Sokatou, in lat. 13° N., long. 5° 45' E., a distance of 700 miles from Lake Tchad. Dr. Oudney, who accompanied him, died by the way about a month after they started. Meeting in health at Kouka, the capital of Bournou, where they left Mr. Tyrwhit as consul, Denham and Clapperton recrossed the desert to Tripoli, at which they safely arrived on 25th January, 1825. Clapperton was soon after raised to the rank of commander, and equipped for a second expedition, intended to reach the sources of the Niger by ascending the stream from its mouth. This was found impracticable from the unhealthy nature of the delta of this great river. Proceeding by land Clapperton reached Sokatou from the S. W., thus connecting his observations with those of his former journey. Here, however, he was destined to end his active and useful life; weakened by fatigue, with feelings irritated by the obstacles thrown in his way, he was seized with dysentery, and after a lingering illness, he expired on the 13th April, 1827. Richard Lander, his faithful and attached servant, was the only European who remained of the party, Captain Pearce R.N., Dr. Morrison, and others, having died soon after they left the coast. Full accounts were published of the several journeys, which added immensely to our knowledge of central Africa. [J.B.]

CLARE, ST., a follower of St. Francis Assise, and founder of an order of nuns, 1193-1253.

CLARENCE, GEORGE, duke of, brother of Edward IV., drowned in a butt of Malmsey, 1478.

CLARENDON, EDWARD HYDE, earl of, was born in 1603, at Hinton, in Wiltshire, the estate of Henry Hyde, his father. He studied at Oxford with the design of entering the church, but be-

came a lawyer on the death of his elder brother through which, in 1632, he succeeded to his father's property. Although he practised his profession for a time, it does not seem to have ever engaged so much of his attention as literature did at first and politics afterwards. In 1640 he was elected a member of Charles I.'s Short Parliament in whose moderate attempts at reform he bore an active part; and when the king contemplated dissolving it, Hyde took advantage of an intimacy he had contracted with Archbishop Laud, to offer earnest remonstrances against that arbitrary and imprudent step. He sat again in the Long Parliament, which the king was forced to summon before the end of the same year. He concurred in some of the earliest of the strong measures now adopted by the house, such as the proceeding against the judges in Hampden's case, and the impeachment of Strafford; but in no long time he became startled by the lengths to which the popular leaders were disposed to carry their opposition to the crown. The king seized the first opportunity of securing to himself so useful a servant Hyde, Lord Falkland, and Colepepper, were secretly appointed to manage the interests of the crown in parliament; and although the cautious and reasonable counsels of the first two of these advisers were disregarded by their master, Hyde continued to frame the royal messages and other documents till the breach with the parliament took place. In 1643, having now attached himself to the king's person, he was knighted and made chancellor of the exchequer; after which he was actively engaged in the king's affairs till 1645, when, on the irretrievable ruin of the royal cause, he accompanied the prince of Wales in his flight from England.—He now resided for two years in Jersey, occupying himself in study and in the composition of his History; after which he joined the prince at the Hague, and continued in his service when his father's death had made him nominal king. He spent more than a year in Spain, vainly soliciting aid, but extending his own knowledge as well as writing moral and devotional treatises. For several years afterwards he was Charles's chief adviser, and, in 1658, received the place of lord chancellor, then only nominal, but soon real.—He returned with Charles II. to England in May 1660, and immediately began to act both as speaker of the House of Lords, and as chief judge in the Court of Chancery; being soon also raised to the peerage. At this time his prospects were seriously endangered, by the discovery of the secret marriage of his daughter to the duke of York through which he became the grandfather of two queens of England. The storm passed away without doing immediate harm. Lord Clarendon was virtually the head of the administration till near the close of 1667; and, as the responsible adviser of Charles II. for more than six years, he cannot but have done many things which would then have been condemned by patriotic men, and many of which would now appear still more censurable. The sale of Dunkirk, and the promotion of the king's marriage, though they were the main cause of the unpopularity which gradually gathered around the chancellor, were certainly not the worst of the steps which were taken, either by his advice or with his sanction and assistance. He had taken

prominent part in the bloody vengeance which, at the beginning of the reign, was inflicted on the egicides and other parliamentary leaders; he was yet more active in conducting that persecution of the dissenters, of which the Act of Uniformity was the consummation; and, in conducting the secret negotiations for a loan from France, he made the king of England to be independent of parliament and the pensioner of a foreign and hostile power. Yet even these acts were only such as the circumstances might have prompted to one who was at once a zealous royalist, a somewhat bigoted churchman, and a statesman fond of power, and actuated by considerations of expediency rather than by elevated principles. If such motives are not very dignified, they are at least very much above the level of those that prevailed among the corrupt and profligate politicians who swarmed about the restored king. Nor was Clarendon's fall caused by any of those acts of his that were really reprehensible. He became unpopular with the nation because of the disgraces incurred in a war undertaken in spite of his dissuasions; he made himself obnoxious to the courtiers by reserved haughtiness of manner, and by a strictness of private conduct which silently rebuked their debauchery; and he lost the favour of the king because he connived only at royal vices instead of banding to them, and countenanced reluctantly acts of misgovernment to which he was expected to give hearty support. After Clarendon's unpopularity had become general, Charles and his parliament vied with each other in their eagerness to ruin him. Repeated messages from the king failed in prevailing on him to make a voluntary surrender of the great seal; and after he had been displaced, and impeached at the bar of the House of Lords, it was only a distinct warning that his master could not and would not save so much as his life, that induced him to leave the country.—He fled to the continent in November, 1667, and would have returned to face his trial had not illness prevented him. He moved from one town of France to another, resuming his studies and writing some of his works; and at length he died at Rouen in December, 1674. The principal writings which he left were his 'History of the Rebellion,' and his Account of his own Life. The former of these, with all its errors and shortcomings, is unquestionably a valuable storehouse of historical materials; while its comprehensiveness of views, its skill in the portraiture of character, and the interest which is excited by its minutely-drawn narratives of events, combine in securing for it a distinguished place among the monuments of English literature. CLARIDGE, R., a Quaker writer, 1649-1723.

CLARK, JOHN, a medical author, 1744-1805.

CLARK, WILLIAM TIERNEY, a civil engineer of distinguished merit. He was early apprenticed to a millwright in Bristol, and worked successively at Colebrookdale and in London under the great Rennie, with whom he remained till 1811. He was the engineer of the West Middlesex Water Works, and to the advancement of this important undertaking his energies were devoted for many years. Suspension bridges early excited his attention, and he has left Hammersmith, Marlow, Norfolk, and Pesth suspension bridges, as monu-

ments of his taste in design, and skill in engineering. The suspension bridge of Pesth, while it stands a monument to his genius, is the admiration of all who have seen it. It was the last and crowning act of a life devoted to a profession of which he was an ornament. He died 22d September, 1852, aged sixty-nine. [L.D.B.G.]

CLARKE, DR. ADAM, was a native of Moybeg, in Ireland, where he was born, 1760. Like many other men of eminence, he was indebted to the influence of maternal counsels and example in the formation of his youthful character, as well as in the choice of his future course; for while his father was an episcopalian, his mother, who was a Scotchwoman and a presbyterian, had, on her settlement in England, warmly espoused the cause of Wesleyan methodism, and used every endeavour to bias the ductile mind of her son in favour of that sect. Though rather dull when first placed at school, his faculties rapidly developed and gave strong pledges of his future eminence. Having in his seventeenth year become impressed with deep views of religion, he resolved to consecrate his future life to the service of God in the ministry of the gospel, and through the recommendation of Wesley, was sent to complete his education at the Kingswood school. There his taste for Hebrew and Biblical studies was awakened; and so strong a hold had a love of sacred literature taken of his mind, that even amid all his wanderings and harassing difficulties as a Methodist preacher, he continued with unflagging resolution to carry on his course of intellectual improvement. He not only occupied his leisure moments while stopping at inns, but even in riding on horseback he generally had a book in one hand; and by this rigid economy of time, he was storing his mind with useful knowledge, as well as collecting materials for his future works. The circuit assigned him to perambulate as an itinerant preacher was Wiltshire. And although, of course, he had various stations in the country, he pitched his residence at Trowbridge, where he formed a matrimonial alliance with Miss Cooke, daughter of Mr. Cooke, clothier, and a lady of great piety, prudence, and amiable dispositions. Mr. Clarke's fame as an Orientalist and biblical scholar having spread extensively, he received the honorary title of LL.D. from the university of St. Andrews, and was enrolled a member of several learned societies both in Britain and America. His ardent attachment to general, and especially to Oriental literature, led him to take an active part in the management and secretaryship of several of those societies. And the duty of maintaining the various correspondence, together with the pressure of his congregational labours, which always held the first place in his regard, so greatly affected his health, that his medical advisers persuaded him in 1815 to resign his pastoral charge. Retiring to a rural retreat in Lancashire, which the liberality of a few friends had presented to him, he lived in the enjoyment of literary leisure. His Commentary on the Bible was prosecuted with ardour; but finding himself deprived of many advantages which to a literary man are indispensable, he disposed of his farm, and after a residence in Lancashire of eight years, returned to establish himself at Eastcott, a small village in the vicinity

of London. In Haydon Hall, an elegant mansion he purchased there, he completed his Commentary, an elaborate work in 8 vols. 4to, which had occupied his attention more or less for forty-eight years, and the publication of which was issued at intervals from 1810 to 1826. Dr. Clarke, though unconnected with any particular charge, had never wholly discontinued the practice of preaching. An engagement of this kind was to have been fulfilled at Bayswater on the morning of the day on which he died. But having been seized with a sudden attack of Asiatic cholera, which was then committing dreadful ravages in London, he was cut off on the 26th August, 1832, maintaining to the last, amid the paroxysms and frightful bodily contortions which that formidable pestilence produced, a mind calm, collected, and firmly reposing on the bosom of his Saviour.—Besides his commentary, Dr. Clarke was the author of several other works, the chief of which are, 'The Succession of Sacred Literature,' 'Memoirs of the Wesley Family,' 'Fleury's Manners of the Ancient Israelites,' 'Shuckford's Sacred and Profane History of the World,' 'Sturm's Reflections, translated from the German,' and 'Harmer's Observations.' In addition to these he was employed several years by the government in collecting materials for a new edition of 'Rymer's Fœdera,' which since his death has been carried on by a commission under government.

CLARKE, ALURED, aut. of sermons, &c., 18th c.

CLARKE, EDWARD DANIEL, LL.D., celebrated for his travels through many countries of Europe and Asia, was born at Wellington, in Sussex, 5th June, 1769. His father was a clergyman of rather limited income, and died before his son's education at Cambridge was completed. After graduating, he obtained, between 1790 and 1798, several situations as resident family tutor; and as travelling tutor and companion to gentlemen of fortune, with whom he visited most parts of England and Scotland. In the latter year he was elected fellow of his college, (Jesus) and came to reside in Cambridge. In the year following he went abroad as travelling companion to Mr. Cripps, and made an extended journey, occupying three years and a-half, a most interesting account of which, originally given in 6 vols. 4to, was his principal work. In 1808, he was appointed first professor of mineralogy at Cambridge, whose museum and library he had greatly enriched by his collections. The British Museum owes to him the celebrated Sarcophagus, incorrectly called that of Alexander, as well as other objects. He took orders in 1805, and enjoyed two livings. His death occurred at London on 9th March, 1822. He was, besides, the auth. of many papers in Thomson's Annals of Philosophy, on physics, and chemistry; and of some dissertations on antiquarian subjects. [J.B.]

CLARKE, H., LL.D., a mathematic., 1745-1818.

CLARKE, HY. JAS. WM., Duc De Feltre, descended from a partizan of the Stuarts settled in France, min. of state under Buonaparte, 1765-1818.

CLARKE, JAS. STANIER, LL.D., brother of Edward Daniel Clarke, a naval historian and founder of the 'Naval Chronicle,' died 1834.

CLARKE, JOHN, a Scotch engrav., 1650-1721.

CLARKE, JOHN, brother of Dr. Sam. Clarke, a classical scholar, author of sermons, &c., d. 1759.

CLARKE, DR. SAMUEL, the celebrated metaphysical divine, was born at Norwich on 11th October, 1675. His father, who had held the highest offices in that city, and was in comfortable circumstances, determined to afford him the advantage of the most liberal education, and accordingly sent him in due time to Caius College, Cambridge, where amid the various objects of academic interest, young Clarke evinced a decided preference for theology. Engaging with untiring ardour the pursuit of knowledge, he acquired an extensive acquaintance with the different branches of physical sciences, especially optics, and made his first essay before the world as an author by the translation of Rohault's physics—a work which long continued to be regarded in this country as the best elementary work for students. While thus however, improving his mind in general knowledge, his chief attention was directed to theology, and desirous of drawing his information from the fountain head, he gave himself to the earnest study of the Scriptures in the Hebrew and Greek originals. By such devotion to study, Clarke early shone by his theological attainments, and almost immediately after obtaining orders in 1669, he began his career as a theological author by publishing 'Three Practical Essays on Baptism, Confirmation, and Repentance,' and shortly afterwards his 'Paraphrase on the Four Gospels.' In 1704 he was appointed to a lectureship on the 'Evidences' and it was in the course of the duty which this situation imposed on him, that he prepared those profound and elaborate works which have raised him to the first rank of philosophical divines, viz., 'Lecture on the Being and Attributes of God,' and a second on the 'Evidence of Natural and Revealed Religion.' These lectures were afterwards expanded into the form of treatises; and although a diversity of opinion prevails as to the soundness and value of the *à priori* argument, no difference has ever existed as to the force with which Dr. Clarke has discussed the subject, and the power which pervades the composition. The publication obtained for him a European renown as a Christian philosopher, and a more substantial reward followed in the preferments which were liberally offered to him in his own church. In 1706 he was appointed rector of St. Bennett's, Paternoster Wharf, London, and though he was the reverse of a popular preacher, he showed exemplary diligence in the performance of his parochial duties. Amid his multifarious engagements his active mind found time to gratify his taste by the culture of physical science; and he published a translation of Sir Isaac Newton's Latin treatise on Optics, for which that philosopher gave him a present of £500, with the still more valuable addition of a private friendship. Dr. Clarke published a new theological treatise entitled 'The Scripture Doctrine of the Trinity,' in which he is supposed lean towards Arianism. He died very suddenly 7th May, 1729, of an inflammatory attack. [R.J.]

CLARKE, LIEUT. WILLIAM, in conjunction with Captain Lewis, led the first great national expedition sent out by the United States. It was planned by President Jefferson, and had for object to ascend the Missouri, cross the Roe Mountains, and reach the Pacific. All this was successfully accomplished between May 1804, and

May 1806. The account is full of interesting adventure and romantic incident; and the journey contributed greatly to the improvement of geography. Such a route had been some time before projected by an enthusiastic individual named Jonathan Carver. [J.B.]

CLARKSON, D., a nonconfor. div., 1622-1686.
CLARKSON, THOMAS, was born on 28th March, 1760, at Wisbeach, in Cambridgeshire. His father, who was a clergyman of the Church of England, taught the free grammar school of the place, and prepared his son for entering St. John's college, Cambridge, which he did in 1783. In that college his accurate scholarship was rewarded by high honours, and the next year when the subject of a prize essay among the senior Bachelors of Arts was announced to be, 'Anne licet invitò in servitutem dare—is it right to make slaves against their will?' Clarkson entered the lists with increased ardour. In the course of his researches into the history and practices of the slave trade, he was led to read 'Benezet's Historical Account of Guinea;' and the perusal, which had been undertaken for a special and merely literary purpose, produced a harrowing impression on his feelings which time could not efface. Ease and tranquillity were entirely banished from his mind; and the first gleam of inward satisfaction that shone into his sensitive and Christian bosom after his introduction to Benezet, arose from his resolution to set about some practicable scheme for mitigating or preventing the horrors of the slave trade. The formation of such a plan was almost as difficult as its execution. But he resolved on surmounting all difficulties. His first step he took was to translate his Latin prize dissertation into English, and by diffusing information on the subject of slavery in as attractive a form as possible, arouse the interest and sympathies of the British public. His proceedings were viewed with earnest attention by several eminent philanthropists, amongst whom were Rev. James Ramsay, Lord Barham, and Granville Sharpe, Esq. By the counsel and aid of these gentlemen he procured intelligence from every vessel lying in a British harbour that had been engaged in the African trade. In addition to real information, Mr. Clarkson endeavoured at great labour and expense to obtain specimens of the industry and manufactures of native Africans for public exhibition. And last of all, he procured an accurate engraving of a slave ship, with its masts and gratings and barricades, for the confinement of the poor unfortunate creatures that were kidnapped. The impression produced by this drawing lent, more than anything else, a powerful impulse to the cause in which he was engaged. Besides all these preliminaries, Mr. Clarkson published a pamphlet on the subject of the slave trade every year—although it was not till 1788 that his great work on the impolicy of that traffic was given to the world. Immediately after this publication he went to France for the public advocacy of the cause in that country. His benevolent exertions met with the warmest encouragement, not only from the French monarch and the celebrated Necker, who was then at the head of the government, but many of the most influential members of the national assemblies, as well as catholic prelates. He needed all this encouragement, for a

host of enemies, both in Britain and on the continent, sprang up against him, consisting of parties interested in the maintenance of the slave system, and who foreseeing the hope of their gains to be gone if he should be successful in his aims, used every means, both fair and foul, to thwart his purposes, and disgust him with his task. But the fierce opposition of these enemies only made the friends of the cause rally more closely around him; and two auspicious circumstances turned the scale opportunely in his favour. The one of these was a voluntary and public offer of Samuel Whitbread, Esq., 'to make good all injuries which any individual might suffer in their business from aiding and abetting the movement;' and the other was the interview to which Clarkson was admitted with the emperor Alexander, at the congress of Aix La Chapelle in 1818, and that emperor's promise to employ his influence with his royal brothers of Austria and Prussia to procure the abolition of the slave trade. The hopes, however, excited in that quarter were slow in being realized. But Mr. Clarkson enjoyed the high satisfaction of witnessing the final triumph of his labours in the enactment of the British legislature in 1807, by which the slave trade was thenceforth declared illegal. Mr. Clarkson belonged to the Society of Friends, and published in 1807 'A Portrait of Quakerism,' and a 'Life of William Penn' in 1813; d. 1846. [R.J.]

CLAUBERG, J., a Calvinist philos., 1622-1665.

CLAUDE, queen of Francis I., 1499-1524.

CLAUDE, duchess of Lorraine, 1547-1575.

CLAUDE, CLAUDE, GELEE, commonly called CLAUDE LORRAIN, from the country of his birth, was born at Château de Chamagne, near Charmes, in the year 1600. He was originally placed with a baker and pastry-cook, and when still young went in company with some cooks of Lorraine to Rome. Claude found a situation as ordinary servant with Agostino Tassi, the landscape painter; he both prepared his master's meals and ground his colours for him. It was to this coincidence that Claude seems to have owed the development of his faculty of painting; he must have been with Tassi towards the close of the pontificate of Paul V.; he became a distinguished landscape painter as early as the time of pope Urban VIII. (1623-44). Claude appeared as an engraver as early as 1630, and his best pictures seem to have been painted from that time to about 1645 or 50. He was extremely slow and careful in his execution; his friend Sandrart, who first taught him to sketch from nature, mentions that he would work a week or more at some portion of a picture without showing any progress; he had great difficulty in drawing the human figure or animals: these were generally added by F. Lauri, J. Courtois, or A. Both, and others. He died at Rome in 1682. The National Gallery possesses some good specimens of Claude, and there is a fine collection of his drawings in the British Museum.—(Sandrart, *L'Accademia Todeca*, &c.; Wornum, *Descriptive and Historical Catalogue of the National Gallery*.) [R.N.W.]

CLAUDE, J., a French protestant in the highest repute as a controversialist, 1619-1687. ISAAC, his son, also a protestant min., 1653-1695. JEAN-JACQUES, son of Isaac, a man of letters, afterw. pastor of the Fr. ch. in London, 1684-1712.

CLAVEREAU, N. M., a Fr. archit., 1755-1816.

CLAVIER, STEPH., a Fr. hellenist, 1762-1817.

CLAVIERE, STEPHEN, born at Geneva 1735, was by profession a banker, and one of the first to unite with Brissot under the republican banner in 1789. He shared in the successes and the fall of the Girondins, especially as minister of finance in 1792, and being arrested with the rest of his party, and condemned by the revolutionary tribunal, put an end to his life in prison, 8th December, 1793.

CLAVIGO, RUY GONZALES DE, a distinguished Spaniard sent by Henry III. of Castile, in 1403, as ambassador to the court of the great Tamerlane, at Samarcand. The account which he published on his return contains many important observations on the countries through which he passed. [J.B.]

CLAVIGERO, FRANCESCO SAVERRO, a distinguished writer on the ancient history of Mexico, its antiquities, and conquest by Spain, was born at Vera Cruz in 1720. He spent thirty-six years among the Indians as Jesuit missionary, but little is known of his private life. He died in Italy about the end of the century. His work was published in Italian in 1780-81, 4 vols. 4to, with maps and plates, and is regarded as a high authority. It was translated into English, London, 1787, 2 vols. 4to. [J.B.]

CLAYTON, ROBT., bishop of Clogher, an. of an 'Introduct. to the Hist. of the Jews,' &c., 1695-1758.

CLEANTHES, the pupil and successor of Zeno as chief of the Stoic philosophers, 3d cent. B.C.

CLELAND, JAS., LL.D., a statis. wr., 1770-1840.

CLEMENCE OF HUNGARY, queen of France, married to Louis X. 1315, died 1328.

CLEMENT, the first of this name, bishop of Rome, generally allowed to be the same that St. Paul mentions as his fellow-labourer, died about 91. CLEMENT II., pope, 1046-1047. CLEMENT III., promoter of the third crusade, 1187-1191. CLEMENT IV., concluded the pragmatic sanction with St. Louis, 1265-1268. CLEMENT V., the first who wore the triple mitre, and removed to Avignon, under the influence of Philip the Fair, 1305-1314. CLEMENT VI., noted for his political

activity, 1342-1352. CLEMENT VII., under whom Rome was besieged by the Constable of France and by whom Henry VIII. was excommunicated 1523-1534. CLEMENT VIII., whose pontificate was distinguished by the elevation of Baronius Bellarmine, Du Perron, and other eminent men to the rank of cardinals, 1592-1605. CLEMENT IX. 1667-1669. CLEMENT X., 1670-1676. CLEMENT XI., by whom the condemnation of Jansenius was confirmed, and the bull 'Unigenitas' promulgated 1700-1721. CLEMENT XII., 1730-1740. CLEMENT XIII., noted for his political reverses, the loss of Avignon, &c., 1758-1768. CLEMENT XIV., distinguished by his enlightened policy and for his Brief suppressing the Jesuits, who afterwards poisoned him, 1769-1774.

CLEMENT, FR., a learned Fr. monk, d. 1798.

CLEMENT, J. M. BER., a Fr. critic, 1742-1811.

CLEMENT, N., a French librarian, 1647-1711.

CLEMENT, TITUS FLAVIUS, was born toward the middle of the second century. In early life he was a pagan, and strongly addicted to philosophical pursuits. After travelling extensively, he became a pupil of Pantaenus, master of a Christian academy at Alexandria. Here he became a Christian and a proselyte, and ultimately rose to be the head of this school of divinity, in which capacity he taught with great renown during the reign of Alexander Severus. About the year 202 he retired at length to avoid persecution, and after various wanderings died about A.D. 220. Clement was an Eclectic in philosophy, but with a very decided bias to Platonism. The besetting sin of his theology is a discursive habit of speculation, without regard to fixed principles, and the fault of his exegesis is his excessive love of allegory, which he indulges without scruple, and on every occasion. His books are valuable for their delineations and samples of contemporary literature and manners. His '*Paedagogus*,' in three books, contains good instructions to a young convert, and his '*Exhortatio ad Graecos*' has many striking and curious thoughts in it. But his best known work is his '*Stromata*' (patch-work) or Miscellany, which is disorderly storehouse filled with useful and interesting information and anecdotes. One of his tracts 'On the Danger of Riches' has been translated in English, London, 1711. The best edition of his works is that of Potter, Oxford, 1715, 2 vols. folio. Some of his treatises have been lost, such as his '*Hypotyposes*' or commentaries. [J.E.]

CLEMENTI, MUZ., an Ital. pianist, 1752-1833.

CLEMENTI, PROSP., an It. sculptor, d. 1584.

CLISSON, OLIVIER DE, const. of Fr., 14th ct.

CLIVE, CATHERINE, an Irish actress, d. 1785.

CLIVE. ROBERT CLIVE, born 29th Sept., 1725,

as the son of a gentleman of good family, but

mall estate, near Market Drayton, in Shropshire.

Robert was noted, in his boyhood, as a daring and

nnamenable spirit; and at the age of eighteen was

sent out to Madras as a writer in the Company's

service—an appointment which was then regarded

in a very different light to what it is now—and

which Clive's friends looked on as providing for
them a good riddance of a wild and unpromising
youth. Our scanty possessions in India were then
menaced by the French, and their native allies;
and, fortunately for Clive, he was soon called on,
like other merchant-clerks in India, to turn soldier
in self-defence. His mercantile employment had
been, in the last degree, distasteful to him; and
he had twice in one day, at Madras, attempted
suicide, by snapping a loaded pistol at his own
head. The pistol missed fire each time. Clive
asked a friend, who came into the room soon after-
wards, to fire the pistol out of the window; the
pistol then went off. Satisfied thus that the
weapon had been duly primed and loaded, Clive
sprang up, exclaiming with an oath, 'I must be
reserved for something great,' and gave up the
idea of suicide. In 1747, three years after his
arrival in India, he formally abandoned the mer-
cantile profession, and took a captain's commis-
sion. He then rapidly distinguished himself, not
only as a most daring, but as a most skilful leader;
and showed pre-eminently the true characteristic
of genius—the power of inspiring all whom he
commanded with his own energy and resolution.
In 1751 the French were besieging the important
city of Trichinopoly; and Clive proposed to make
a diversion in its favour, by an expedition from
Madras against Arcot. At the head of 300
sepoys and 200 Europeans, Clive surprised and
captured Arcot; and then defended that place
successfully against the hostile army, 10,000
strong, that speedily besieged him. Being joined
at last by a body of friendly Mahrattas, Clive
advanced against his enemies, completely defeated
them, relieved Trichinopoly, and captured several
places of importance, which had been in the hands
of the French or their allies. In 1753 the state
of Clive's health compelled him to return to Eng-
land, where he was received with great honour.
Both the king's ministers and the Company were
now eager to employ him; and in 1755 he was
sent out to India as lieut.-colonel in the army, and
governor of St. David's. He destroyed some nests
of pirates on the Coromandel coast, and reached
Madras on the 20th June, 1756. On that very
day the English in Bengal experienced the heavy
disaster of the capture of Calcutta by Surajah
Dowlah, the savage who caused his prisoners to
perish in the hideous agonies of the Black Hole.
Clive sailed from Madras to the Hooghly to save
the English power in Bengal from being utterly
destroyed by Surajah and his French auxiliaries.
He drove the enemy out of Calcutta, and a tem-
porary treaty was made; but hostilities soon re-
commenced, and on the 23d June, 1757, Clive,
with 3,000 men, only one-third of whom were
Europeans, encountered and utterly routed the
nabob's army of 50,000, in the ever-memorable
battle of Plassey. This decisive victory secured for
the English not only the mastery of Bengal,
but the permanent ascendancy over the East.
Clive gained other important military advan-
tages over our European rivals, as well as
over native enemies, and returned to England in
1760, loaded with wealth and glory. He was
enthusiastically received, and created (by an Irish
peerage) Lord Clive, baron of Plassey. In 1764
he was again sent out to India, where our affairs

had fallen into confusion during his absence. Clive on this occasion had no opportunity of earning more military fame; but he honourably distinguished himself by his exertions in the more difficult and invidious duty of reforming the gross abuses that abounded in our Indian administration. This made him many enemies; and on his final return to England, in 1767, he became the object of incessant obloquy and attack in the public press, in the discussions at the India House, and ultimately in the House of Commons. Clive was, in fact, far from a faultless man. Throughout his career in the East, he had, in his negotiations and diplomatic dealings, acted on the maxim, that it was quite allowable to fight the cunning and faithless natives with their own weapons. He said, in his defence, that it was a matter of true policy and justice to deceive such villains. Acts of chicanery, and even of forgery, could thus be truly charged against Clive, which, in the judgment of many of the best of his countrymen, no amount of success could justify. But Clive's fearless defence of himself in parliament was very effective. The magnitude of his services was undeniable; and the House of Commons, after a long debate on 23d May, 1778, refused to vote that Lord Clive had abused his power, and came to the resolution, that 'Lord Clive has rendered great and meritorious services to his country.' But though thus honourably acquitted in parliament, Clive's haughty spirit suffered deeply from the attacks aimed at him; his health also was impaired, and he aggravated fearfully both his mental and physical prostration by the immoderate use of opium. Robert Lord Clive, baron of Plassey, died by his own hand on the 22d November, 1774. [E.S.C.]

CLODIUS, a Roman tribune, killed 51 B.C.

CLODOMIR, king of Orleans, 523, killed 524.

CLOOTS, JEAN BAPTISTE DU VAL DE GRACE, better known as Anacharsis Cloots, the classical prenom being adopted by him from Greek history as a substitute for his baptismal names, which he rejected as having a superstitious origin, was a Prussian baron, notorious for his violence in conjunction with the Chaumettes and Héberts of the French revolution, and for his intense hatred of any natural or revealed religion. He was a political fanatic of the blackest dye, and openly proclaimed himself 'the personal enemy of Jesus Christ.' This sentence, from his book entitled 'De la République Universelle,' expresses at once the character of the man and the tendency of his doctrines:—'The people is the sovereign and God of the world; France is the centre of the People-God; only fools believe in any other God or Supreme Being.' His particular monomania was a universal republic, of which he professed himself the ambassador, with the title of 'Orator of the Human Race,' and in this character he paraded his followers of all nations, or vagabonds attired to represent them, before the bar of the national assembly. He had visited the greater part of Europe, and expended a considerable fortune to propagate his opinions, for which he at last found a platform in the national convention, where he was sent by the department of the Oise, 1792. He is the author of several works published between 1780 and 1793, the last entitled

'Base Constitutionnelle de la République du Genre Humain.' He was included in the accusation of St. Just, and executed with Chaumette and others, 1794. [E.R.]

COBB, SAMUEL, an English poet, died 1713.

COBBET, WILLIAM, a self-taught man, who obtained great celebrity and influence during the early part of the nineteenth century, by his genius, energy, and waywardness, is generally said to have been born in the year 1762. His father was a farmer, who kept a small public house in Surrey. William was brought up to that stolid ignorance which has long been the general inheritance of the English peasant; but his was not a temper to endure such bondage, and from an early age he greedily acquired knowledge, stamping all he obtained with that mark of individuality which the self-learner sets on his acquisitions. Fate made him for some time engrossing-clerk to an attorney, a pursuit which his soul abhorred. It appeared to have been his loathing towards the drudgery of the desk that drove him to enlist in an infantry regiment destined for American service. He bore a testimony to the small amount which the routine duties of a soldier can take from the available services of an active mind, for in his leisure hours he gave himself an education such as few hard-working scholastically-taught men possess, and performed his duty so punctually and effectively that he was immediately raised over the heads of many seniors to the rank of sergeant-major. In his service in America he met the young girl who afterwards became his wife, and his conduct towards her throughout, as well as his domestic virtues generally, should be balanced against his public failings. In the year 1791 he desired discharge from the army and obtained it on a ground of good conduct. He brought a charge of peculation against four officers under whom he had served, and when a large body of witnesses were in attendance, and other preparations were made for the trial, he abandoned it by suddenly disappearing, leaving it still a question whether he acted under caprice or settled design. From

period to the day of his death, he led a restless life as a political writer. To enumerate his works by their mere names, would fill more space than can be afforded here for his biography. The work for which he was chiefly noted in his day was the

'Weekly Register,' which kept him for thirty-three years in the eye of the public. But his most meritorious service to literature was in his English and French Grammar; while his best gift to the humbler classes, whose cause he always professed, was his 'Cottage Economy.' He was a signal exception to the uneventful nature of literary lives, for his pen was ever exciting new sources of conflict, and the prosecutions he underwent from men of all parties, make in themselves an incidental history. It may be said that he never supported an opinion which he did not live to attack, or praised a man whom he did not live to censure; and in his old age he seemed to be returning to those high Tory opinions of his younger years, which he employed his middle age in lashing with savage scorn. He had to a wonderful degree the capacity not only of advocating a particular side in a question, but of making whatever he took up seem vitally important, while everything of a different character was childish or foolish. The reader of the greater portion of his works would pronounce his mind capable of appreciating merely the material elements of existence, and entirely destitute of idealism, poetic dreaming, or enthusiasm. But this appearance is mainly owing to his perverse censures of all his fellow-workers in the intellectual field. He was in reality a wayward victim to the influence of fancy, though it took its character from his energetic nature, and there are few such instances of a perverse idolatry recorded in later times, as he committed when he brought the bones of Thomas Paine to Britain to be consecrated by his homage, like the relics of a saint. He had made several attempts to enter parliament, but did not succeed until after the passing of the Reform Act, when in 1832 he was returned for Oldham. In the House of Commons, where only wonderful eloquence covers such defects as caprice and factiousness, he found his level as a senator, and few members had less influence. To the last, however, his capacity was the object of high admiration. Yet he left nothing behind him indicative of a permanent influence on the opinions or conduct of mankind. He died on the 18th of June, 1835.

COKAYNE, SIR ASTON, a dram. poet, 17th ct.

COKE, SIR EDWARD, a great practical and institutional lawyer, was born at Mileham in the county of Norfolk, on 1st February, 1552. He was called to the bar on the 20th April, 1578. Next year he began his career of fame and practice by being appointed recorder of Lyons Inn. He was appointed recorder of Norwich in 1586, and of London in 1592. He had not, however, held the office for a year, when he resigned it on being appointed solicitor-general. In 1594 he became attorney-general. He had in such difficult times much very serious and laborious business to transact as a crown lawyer. He has been subject not unjustly to reproach for his overbearing and insulting demeanour to the unfortunate victims of the crown prosecutions, and especially towards Sir Walter Raleigh. He was a man of haughty manners, severe spirit, and irritable temper, and he had little toleration for anything standing in the path of what he deemed his duty. But his severity was not dictated by subserviency to the court, and no influence in the corrupt reign of James could prompt him to go out of the line of his duty. He was made chief justice of the

Common Pleas in 1606, and of the King's Bench in 1613. Here he exerted himself sternly in the investigation of the horrible system of iniquity which Somerset the court favourite concentrated round him, and showed a determination which not only overawed the parasites, but intimidated James himself. In 1616 a systematic attack, in which Bacon had the baseness to aid, was made on the resolute chief justice, and he was dismissed. He was partially restored to favour, but was again subject to attacks, which very naturally disposed him to put his great acquirements at the disposal of the constitutional opposition, which arising in the reign of James, completed its work in that of Charles. He owed much of his success in early life to two marriages—the one bringing fortune, the other connection. After spending his old age in wealthy retirement, he died on 3d September, 1633. His celebrated 'Institute,' which grew out of a commentary on 'Littleton's Treatise on Tenures,' has made him the great oracle of English law. His expressions, however antiquated they may appear, are deemed sacred, and are always embodied where their substance has not been superseded by changes of the law, in the works of subsequent commentators. [J.H.B.]

COLARDEAN, C. P., a Fr. poet, 1732-1776.

COLBATCH, JOHN, an English pharmacopelist, 17th century.

COLBERT, JEAN BAPTISTE, a financial statesman, was born at Rheims in 1619. His immediate origin was somewhat obscure. It is disputed whether his father was a wine merchant or a councillor of state, but he met the prejudices of the noblesse against his rise to power by professing to belong to an ancient Scottish family. The recommendation to employ him was a legacy of Cardinal Mazarin to Louis XIV., and in 1661 he was made comptroller-general of finances. Using the great power either for good or evil belonging to this high office, he redeemed much money to the state by mercilessly scrutinizing the proceedings and liabilities of the farmers-general, and came to an adjustment with the national creditors. He extended the colonial power of France, carried on great public works, created a navy, and fostered into existence several manufactures. In this last operation, as his administration was very prosperous, he seemed to justify the system of government protection and interference with trade, but it was the spending of the resources which his vigorous financial system put at his disposal that created the appearance of prosperity, and subsequent reaction showed that successful trade could not be artificially created. He founded the Academies of Inscriptions, of Sciences, and of Architecture. He died in 1683, neglected by the court and suspected by the people, who charged him with acquiring his great fortune by unworthy means. [J.H.B.]

COLEONI, B., an Italian condottiere, d. 1475.

COLERIDGE, HARTLEY, son of Samuel Taylor Coleridge, remarkable for his original talents as a poet and essayist, and for his unhappy habits, 1797-1849.

COLERIDGE, HENRY NELSON, cousin of the preceding, a distinguished lawyer and classic scholar, died 1843.

COLERIDGE, SAMUEL TAYLOR, the youngest son of the vicar of St. Mary Ottery in Devonshire, was born at that place in October 1772. Left an orphan in his ninth year, he was educated for seven years at Christ's Hospital, where Charles Lamb was his fellow-pupil; and in 1791 he became a student of Jesus College, Cambridge. He had already devoured numberless books of all kinds, had especially attached himself in boyhood to metaphysics and theology, and had been inoculated with a love for poetry by the sonnets of Bowles. At the university his reading was great; but it was desultory and irregular, and hardly at all directed to the sciences which led to academical distinction. In 1793, vexed by debts, he went to London, and enlisted in a dragoon regiment, from which he was released after four months, and returned to Cambridge for another term or two. Now, however, his theological creed had become unitarian; and he at once gave up all views towards academical preferment. In 1794 was published the drama called 'The Fall of Robespierre,' of which the first act was Coleridge's, and the other two were Southey's; and the two poets, then entertaining, in common, many of those extreme opinions which they afterwards abandoned so thoroughly, occupied themselves at Bristol in planning a new social community, which they were to found in the United States. At this town and elsewhere Coleridge delivered courses of public lectures (some of which he published, dealing both with politics and with religion; and he also preached in unitarian pulpits. In 1795 he married Miss Fricker, whose sister soon afterwards became Mrs. Southey. In this year also he became acquainted with Wordsworth.—In 1796 he published, without success of any kind, ten numbers of political miscellany called 'The Watchman;' and in the same year appeared his first volume 'Juvenile Poems,' to which, in a second edition the year afterwards, other pieces were added. His genius, however, was not exhibited in its strength till the summer of 1798, when Wordsworth's famous volume of 'Lyrical Ballads' appeared. It contained Coleridge's 'Ancient Mariner,' 'Love,' 'The Nightingale,' and 'The Foster-mother Tale.' The first part of 'Christabel' was written in 1797, the second in 1800; but both parts were for a good many years known only to a few literary men. The tragedy of 'Remorse' also was written in 1797; though being despised by Sheridan it did not find its way either to the stage or to the press. It is thus a fact, one of the many singular ones in the history of this remarkable man, that almost all the poems on which his celebrity rests were composed in one short period, not extending much in either direction beyond his twenty-fifth year. We of this generation, whose youth received its poetic lessons from a school in which

Coleridge is one of the masters, have difficulty in apprehending aright either the real importance of Coleridge's poetry, or the reasons which naturally posed it for a time to extremes of dislike or adoration. It bears hardly any traces of those trines, in obedience to which Wordsworth rked so doggedly; unless such doctrines died to him the outline of 'The Ancient Mariner.' led he never, either then or afterwards, was dded in poetical composition by any deliberately-ceived theory. In poetry, as in philosophy, his nking was fine and subtle, but neither systematic, consistent, nor clear. But in imagery, as in ight, his poetic originality is marvellous; his tures float in an atmosphere romantically and ally beautiful; and his tone of sentiment varies in an imaginative rapture to solemn or intense demness. 'Christabel,' a poet's hazy dream of eliness, suggested much both in matter and in sification to Scott, who admiringly owned his gations; it and others of his poems prompted e than any other works to the later poets of the e; they were the prototypes of that visionary ary which was elaborated by Keats and Shelley; none owed more to them than Byron, who pped to despise them.—Even before all these fine uns had been written, the poet's worldly helplessness became but too evident. Scheme after me failed in securing to him the means of hlihood; and among these was a proposal by generous friend Mr. Poole to procure an anty for his support. In 1798 the munificence Mr. Wedgwood enabled him to reside for more a year in Germany; an event which opened him a new world of thought, and modified ntially the whole subsequent history of his inect. On his return to England he resumed an agement he had already formed for contribut- political articles and poems to the *Morning* newspaper, which was followed, some years r, by similar employment in the *Courier*. But withstanding the acknowledged ability of his ys, he was neither practical nor industrious ough to be a useful newspaper writer. He resided afly, for a considerable time, in the Lake dist- near Southey and Wordsworth; and for en months in 1804 and 1805 he made his last mpt as a man of business, by acting as secre- to Sir Alexander Ball, the governor of Malta. His noble translation or paraphrase of Schiller's 'Wallenstein' appeared in 1800. In 1809 and 0 he wrote and published at Grasmere, in 27 bers, the periodical called 'The Friend,' which, hough undigested and ill calculated for popular- (like all his prose works), contains much both eep speculation and of fine criticism. In 1813 'Emorse' was acted with much success at Drury e; and 'Christabel' was published in 1816. hat year and the next appeared the two 'Lay mons;' and 1817 produced both the dramatic in 'Zapolya,' the poems entitled 'Sibylline ves,' and the series of essays called the 'Bi- ographia Literaria.' In the last of these works he e his earliest exposition of those philosophical ions which he had formed since his return in the continent, deriving his groundwork nly from the German thinkers who had writ- since Kant. His metaphysical system, here epted in its speculative aspect, is in substance

identical with the 'Natur-philosophie' of Schelling; although in many points of detail there is much of originality and acuteness both of thinking and of illustration. The dreamy indistinctness which, now and ever after, hung about the philosophy of Coleridge, was owing, doubtless, in part, to the difficulty of the problems with which, in emulation of his German models, he continually ventured to grapple. Much of it, however, arose from the native character of his own mind, and from that tendency towards excursive musing which had become habitual with him. The borrowings from Schelling and others which he made so freely in the 'Biographia,' were repeated, Wilhelm Schlegel being now the lender, in a course of Lectures on Literature which he delivered in London in 1818. He had lectured previously; but this is the only course which has been preserved, and even it only in the shape of fragmentary notes.—Some time before this he had found a quiet and friendly home, in which were spent the last eighteen years of his life. It was in the house of Mr. Gillman, surgeon at Highgate, where he died in July, 1834. There both mind and body were restored, as far as it was possible, from the excitement and ill health which had been caused by the use of opium, resorted to at first as a palliative of illness, but afterwards taken habitually. There, also, in the close vicinity of London, Coleridge, one of the most striking and eloquent of talkers, drew round him attentive listeners to his meditative harangues, and had his words recorded by hands as reverent as those that had chronicled the sayings of Johnson. Some of the fruits were published as his 'Table-Talk.' The principal aim of his thoughts in those later years was the construction of a Philosophy of Religion, bearing a spiritual and mystical cast, and quite alien from the opinions of his youth; and to this point tend, more or less directly, almost all his works of that period. In 1825 appeared the 'Aids to Reflection;' in 1830 the work 'On the Constitution of the Church and State;' extracts from his note-books, with the lectures of 1818, and a good many poems, made up four volumes of his 'Literary Remains,' published in 1836-39; and in 1840 was printed his short treatise on the inspiration of the Scriptures, entitled 'Confessions of an Inquiring Spirit.' COLLINS, ARTH., a genealog. wr., 1682-1760.

COLLINS, J., an English geometr., 1624-1683.

COLLINS, JOHN ANTHONY, born 1676, died in 1729; a daring freethinker, and a friend of Locke. He attached himself to the most objectionable part of Locke's system, denying human liberty, and of course impugning immortality. His writings do not contain much that can interest the student now.—He was one of the adversaries of Dr. Clarke.

COLLINS, SAMUEL, an English phys., 17th ct.

COLLINS, WM., a disting. artist, 1787-1847.

COLLINS, WILLIAM, the most interesting of all the minor poets of England, was born at Chichester, in 1720, and died there in the care of his sister, 1756. He was the son of a respectable tradesman of that city, and was educated at Winchester and Oxford. Before leaving the university he published the 'Oriental Eclogues,' along with an epistle to Sir Thomas Hanmer on his edition of Shakspeare. In 1744 he came to London as a literary adventurer, and about two years afterwards published his 'Odes,' and made the acquaintance of Dr. Johnson, who held him in high esteem. His life in the metropolis seems to have been irregular, and until the death of an uncle who left him a legacy of £2,000, was one of continual hardship. His conduct to his publishers on the receipt of this little fortune was most honourable, his first use of it being to repay the losses they had sustained by rating his genius more highly than the unappreciating public. Un-

happily the seeds of disease and occasional insanity had been too deeply sown in his former abject condition to be eradicated, even by the alteration of climate and the scenes of other lands, and after a short sojourn in France, he passed through the doors of a lunatic asylum to his early home. The tribute paid to his memory by Dr. Johnson is long to cite here, but some passages of it must be omitted:—"The appearance of Collins," he said, "was decent and manly; his knowledge considerable, his views extensive, his conversation elegant, and his disposition cheerful. He was a master of extensive literature, and of vigorous faculties. He was acquainted not only with the learned tongues, but with the Italian, French, and Spanish languages. . . . His morals were pure, and his opinions pious: in a long continuance of poverty and long habits of dissipation, it cannot be expected that any character should be exactly uniform. There is a degree of want by which the freedom of agency is almost destroyed; and long association with fortuitous companions will last relax the strictness of truth, and abate the fervour of sincerity. That this man, wise and virtuous as he was, passed always unentangled through the snares of life, it would be prejudicial and temerity to affirm; but it may be said that at least he preserved the source of action unpolluted: that his principles were never shaken, that his distinctions of right and wrong were never confounded, and that his faults had nothing of malignity or design." With regard to his poetical genius there can be no hesitation in pronouncing the genius of William Collins to be unsurpassed by anything of the same species of composition in the English language, and that to the 'Passions' is a perfect masterpiece of poetical description. The Oriental Eclogues are exquisite portraits of natural feeling, and, to do them full justice, perfect cabinet pictures of Eastern scenery. [E.]

COLLINSON, PETER, an English naturalist and antiquarian, 1694-1768.

COLLOT D'HERBOIS, JEAN MARIE, known for some twenty years previous to the French revolution as a dramatic author and actor, afterwards as a sanguinary Jacobin, was born in Paris 1750, and commenced his political career as a club orator, and author of the famous 'manack of Father Gerard,' which raised him to such notoriety that he was sent to the national convention by the department of the Seine 1793. His first act was to propose a decree declaring the abolition of royalty, and ever after his voice was one of the most influential in the Jacobin Club, the Committee of Public Safety, and the convention, and was always raised in favour of the most violent measures. He was a man of drunken debauched habits, but had the advantage of a fine figure and commanding voice.

His audacity and hardness of heart pointed him out as a proper agent for the punishment of the Lyonsese, after the insurrection of that city and conquest by the army of the republic. His league in effecting these reprisals was the notorious Fouché. Finding the guillotine somewhat formal and tardy in its vengeance, they collected their prisoners together and disposed of them by fusillade. Collet himself admitted, and defended the act, that on one occasion sixty prisoners

lled at a blow by cannonading. It would be difficult to find a redeeming trait in his character, which may be summed up as that of a cruel unprincipled adventurer, in whose estimation the scenes in which he acted involved no higher responsibility than those of his own dramas. The tragical quality to him and his party were their fears of Robespierre, to whose fall Collet contributed as president of the convention on the night preceding the 9th Thermidor. He was among the sansculottes bound and transported to Cayenne in 1795, where he died in horrible and most appropriate torments after rough drinking a bottle of brandy when suffering from the yellow fever. [E.R.]

COLLYER, JOSEPH, an Engl. transl., d. 1776.
COLLYER, JOSEPH, an Engl. engrv., 1748-1827.
COLMAN, GEORGE, was born about 1733, at Florence, where his father was then the British minister. While a student at Oxford he began in 1754 to publish, with Bonnet Thornton, the series of periodical essays called 'The Connoisseur.' He was afterwards called to the bar, but never prosecuted his profession, and was speedily immersed in other pursuits. In 1767 he became a joint lessee of Covent Garden Theatre, and was for some time the acting manager; and in 1777 he succeeded Foote at the Haymarket Theatre, which he managed till 1785, followed by mental imbecility, unfitted him for all exertion. He died in 1794. Besides a good translation of Terence in blank verse, and translation and commentary on Horace's 'Art of Poetry,' he wrote several comedies and farces, and altered a good many older plays for the stage. He is remembered as the author of two stock comedies, 'The Jealous Wife,' and 'The Landstine Marriage,' the latter of which was in part written by Garrick. [W.S.]

COLMAN, GEORGE, the Younger, the son of the preceding, was born in 1762. After a somewhat shifting course of education, he commenced the study of the law, which, however, he, like his father, soon abandoned. He was the manager of the Haymarket Theatre during the years of his father's illness, on whose death he received a renewal of the patent. He was the author of a good many comedies and farces; and possession of the stage is still kept by some of his pieces, such as 'John Bull,' 'The Iron Chest,' 'The Mountaineers,' 'The Heir at Law,' 'The Poor Gentleman.' Colman, not very witty in his plays, was remarkably so in his conversation; and there is great liveliness, with still greater coarseness, in his collections of comic rhymes, such as 'Broad Grins,' and 'Poetical Vagaries.' For the last few years of his life he was deputy licenser of plays, and distinguished himself by a more than puritanical severity in the censorship of the language of the dramas he had to read. He died in 1836. [W.S.]

COLUMBUS, DON BARTHOLOMEW, brother and fellow-voyager of the great discoverer, whose tutor he had been, remembered as a constructor of charts and founder of St. Domingo, died 1514.

COLUMBUS, CHRISTOPHER, was born in Genoa, about the year 1435 or 1436. His father followed the trade of a woolcomber, and his ancestors had long occupied a like humble position. The name was Colombo in the Italian; the Latin form was given to it by himself at an early period, in his letters; and conceiving that Colonus was the Roman original, he changed the name to Colon when he went into Spain, better to adapt the word to the Castilian tongue. With the exception of one year spent at Pavia, his education was conducted in his native city, and was confined to such studies as fitted him for the nautical profession, to which he showed an early bent. He went to sea at the age of fourteen, and though few of the events which marked his life for twenty years are known, it is certain that he was often engaged in perilous enterprises, both as commander and serving in a subordinate capacity. We find him at Lisbon in 1470, probably attracted by the fame of the discoveries on the African coast, and a desire to obtain employment under the Portuguese princes. He was now about thirty-five years of age, tall, and well-formed, of dignified carriage, and engaging manners. Already his hair had become quite white, doubtless in consequence of the hardships and anxieties of his early days. About this time he married Felepé Mõnis de Palestrello, daughter of an Italian gentleman deceased, who had been a navigator under Prince Henry, and had colonized, and been governor of, the isle of Porto Santo. He now occupied himself in constructing maps and charts, contributing of his means to the support of his aged father at Genoa; he made several voyages to the coast of Africa, and resided for some time at Porto Santo, where his wife had a small property; and here his son Diego was born. He visited also the Canaries and Azores; and, eager to pass the bounds of existing knowledge, made a voyage in 1477 to the northwards of Iceland. Before this date, however, as early as 1474, he had conceived the design of

reaching India by a westward course. Judging from the latest and best accounts, he gave by far too great an extension to the east of Asia, and on high authority took the size of a degree considerably below the truth, thus greatly under-estimating the earth's size. It followed that the Atlantic might easily be traversed. The scheme was a magnificent one; but it is difficult for us now, in the advanced state of our knowledge, to look at it in all its grandeur and boldness. He supported his views by the authority of Aristotle and other ancient writers, who had suggested that India might be reached by going west from the Pillars of Hercules; and by traditions and rumours concerning land to the west, and objects seen floating in the Atlantic, or cast ashore by westerly winds. Copious memoranda of all the grounds of his persuasion were found among his papers. To reach India by sea was still the great problem of geography. Columbus offered to John II. of Portugal to solve it by sailing westwards; and would most probably have prevailed upon the king to send out an expedition, had it not been for the secret counter-plotting of some of the council, whose duplicity, winked at by the monarch, so disgusted Columbus, that he took his departure for Spain. This was in 1484 or 1485; his only companion was his son Diego, then about eleven years old, his wife having died sometime previously. Though entering Spain in great poverty, he soon made friends, and got an introduction to the king and queen. They hesitated to undertake so great an enterprise, and several councils reported unfavourably; still Columbus persevered in new applications, and for seven years was kept in a painful state of suspense. At length, after a last trial, in February, 1492, he left the residence of the court, and set out on his way to France. Two of his friends got an immediate interview with the queen—overcame her scruples—and Columbus was brought back. Isabella had offered to pledge her jewels, but the king was afterwards prevailed upon to furnish the greater part of the funds, Columbus himself undertaking an eighth, and getting the same part of the profits. He was to have one-tenth of all metals, gems, and merchandise, the office of admiral, with descent of title, and to be viceroy and governor-general of the new lands. The articles of agreement were signed on the 17th April, 1492. On Friday, 3d August, 1492, the expedition sailed from Palos, near Moguer on the Tinto; it consisted of three small vessels, two without decks, and 120 men, who had been procured with the utmost difficulty, owing to the general dread of the voyage. The celebrated brothers Pinzon commanded the two smaller vessels, of about fifty tons each, named the *Pinta* and *Nina*, the admiral the *Santa Maria*. The only difficulty encountered was the mutinous tendency of the crews, excited by their terrors. Columbus repressed these with extraordinary tact; he was, besides, a skilful sailor, and had helps which a few years before did not exist. The compass had been receiving more attention, and the astrolabe, an instrument like our sextant, had been lately introduced.—Sitting on the high poop of his vessel, at ten o'clock on the night of the 11th October, 1492, gazing earnestly ahead, Columbus plainly saw moving lights upon some land. Four hours of most exciting suspense followed.

At 2 A.M., Rodrigo Triana, a sailor in the *Pinta* which was a little in advance, saw the land itself. Dawn revealed a lovely island—Guanahani or San Salvador, one of the Bahamas. He afterwards discovered Cuba and Haiti; and deeming all these portions of Asia—a delusion under which he laboured till his latest hour—he called the inhabitants Indians; a name which became general before the truth was known. The discovery produced an extraordinary sensation in Europe; and Columbus was received by the sovereigns, and in every part of Spain, with the highest honour.—On September 25th, 1493, he sailed from Cadiz with a fleet of seventeen ships and 1,500 men, and discovered the Windward Isles, Jamaica, Porto Rico, &c., and founded a colony in Hispaniola. Disappointed in their hopes of making rapid fortunes, many of the adventurers who went out with him became discontented, and returning home spread calumnies against the admiral. Leaving his brother Bartholomew governor, he returned home, was received with favour, and refuted all the charges preferred by his enemies. His third voyage, entered upon 30th May, 1498, was rewarded by the discovery of Trinidad, the Orinoco, and the coast of Paria. He found the new colony in a disorganized state, and remained some time to restore order. Complaints, however, still reached Spain, and a commissioner named Bobadilla was sent out to institute inquiries. He exceeded his powers, and sent Columbus home in irons, with his two brothers Bartholomew and Diego. There was a general burst of indignation in Spain; the king disclaimed complicity, and the queen bestowed her usual favour. Bobadilla was recalled, but the admiral was not reinstated. This favour he long sought in vain, and till the day of his death he got no redress, though there was not the semblance of proof against him. Columbus had served the king's purpose, who now repented that he had bestowed such powers and privileges. The admiral was, however, sent upon a fourth voyage, 9th May, 1502, to search for a passage from the Caribbean Sea into what was supposed to be the great Indian Sea, from which Vasco de Gama had recently returned laden with the richest treasure. The voyage was disastrous; and the constitution of Columbus, on which the infirmities of age had already made roads, never recovered from the shock which it sustained. In coasting central America, he got a hint which if followed up might have led to the discovery of Mexico and the Pacific, and shed new lustre on his declining years. He returned in the end of the year 1504, and renewed his appeals to the justice and generosity of the king. While urging them in person, or by means of his son, brother, or other friends, he was seized with a violent attack of gout, and expired on the 20th May, 1506, in full possession of his faculties, and in a vigorous frame of mind. In his latter days of connection with, and neglect of, Beatrice Enriquez of Seville, mother of his natural son Fernando, 'weighed heavily on his conscience,' and on his deathbed he made provision for her. Fernando was now eighteen years of age; he became the biographer of his father, by whom he had always been treated with the same affectionate regard as his other son. The latter, Don Diego, renewed his application for redress; and at length commended

law process against the king before the 'high council of the Indies.' This court decided against his majesty; and about the same time a mutual attachment having sprung up between the young admiral and the Donna Maria de Toledo, niece of the celebrated duke of Alva, who was cousin-german to Ferdinand, and high in his favour, such influence was brought to bear, that the king was obliged to yield, though not so far as to restore all the dignities and privileges at first conferred. As vice-queen in Hispaniola, this lady behaved with great dignity, propriety, and spirit, and did excellent service to her husband, who, like his father, was never free from the persecution of enemies. Her eldest son, Don Luis, resigned all claim to the former titles for a handsome pension, with the titles of duke of Veragua and marquis of Jamaica. His eldest daughter married Don Diego, her cousin; and they jointly enjoyed the honours and estates, but died without issue;—and the legitimate male line became extinct. At length, in 1608, the property and titles passed into a branch of the house of Braganza, in the person of Don Nuno de Portugallo, who was grandson of Isabella, third daughter of Don Diego Columbus, by his first wife, Donna Maria de Toledo. CONDILLAC, ETIENNE BONNET DE, born at Grenoble, 1715, died in 1780; certainly the metaphysician who, until the recent revival of philosophy, has exercised greatest sway in modern times over the tone of speculation in France. It is explained under the article **LOCKE**, under what cir-

circumstances, and in what direction, the English philosopher gave an impulse to the inquiry concerning the *origin of our ideas*. Erroneously we think, it had become, nevertheless, the ambition of metaphysical inquiry to establish, as its starting point, some theory which might account for the generation of human thought; and the doctrine propounded by Locke had obtained extensive acceptance. Condillac at the outset acknowledged the Englishman as his master; maintaining in his earliest publication, that all knowledge is made up of our sensations, and of the action of the mind in reflecting upon these. Sensation and Reflection; no idea exists or can exist in the human intellect which may not be traced to one or other as its source. As we have shown elsewhere (article LOCKE) this doctrine ignored the existence of all ideas involving the characters of universality, necessity, and infinity,—reducing them to mere negations, or averments that certain things have *no known limit*; nevertheless, it continued to recognize as much *activity* on the part of the Mind, as enabled Locke to preserve the conception of human liberty; but this too fell before the subsequent ‘simplification’ by Condillac. French philosophy—technically so called—reached its culmination in the ‘*Traité des Sensations*,’ the agency of *Reflection* being there dispensed with, and all knowledge traced to *Sensation* alone. As a specimen of Condillac’s reasoning, take his positions—fundamental ones—regarding Attention. If, he asserts, a multitude of sensations of equal vivacity are experienced at the same time by any mind, nothing occurs save the perception of the feeling occasioned—a perception which passes off with the circumstances; but if, amidst the crowd of feelings, some one exists of great comparative vivacity and so predominates, the mind is instantly rivetted by this sensation in proportion to its vivacity;—which rivetting we call *Attention*. Condillac overlooks, of course, the attribute which chiefly characterizes every act of attention, viz.: its dependence on the *WILL*; to be impressed keenly depends indeed not on us,—to be attentive to any impression, does depend on us. In a way quite as faulty, Condillac, with great logical parade, seeks to account for acts of memory, of judgment, of reasoning, and for all our sentiments and emotions. Mind with him is a mere bundle of sensations now being experienced, or which have been experienced; there is nothing in it save the consciousness of all the external world is doing to it, or the recollection of all it has done to it. It is easy to see that in such a system, no pretence of a recognition of human Liberty could find a place; nevertheless, Condillac was not a *materialist*. He held firmly by the averment, that the seat of sensation is the *soul*, not the *organ*—leaving it to Cabanis to take the next downward step,—even then not the last, for we have seen how the physiologist saved himself by the fancy of a supermaterial *vital* principle.—The vices inhering in Locke’s *method*, but veiled so far by effect of the good sense and practical sagacity of the Englishman, stand out as they really are, and are virtually destroyed through exaggeration, in the writings of Condillac. It never seems to have occurred as desirable to this logician, that he should ascertain whether the ideas he is accounting for, be

really the ideas which constitute human thought: certainly it would be reckoned strange now in a *physical* inquirer, were he to ignore facts, or rather—without compunction and without shame—to twist facts, so that his theory be saved! Unhappily it is easy to theorize in metaphysics; it is easy to produce schemes which will account, if not for actual fact, at least for something a little like actual fact: the difficulty lies in the just description and analysis of psychological phenomena.—Condillac’s precision and clearness suited the French taste. Not given to introspection, and apparently not capable of it, that accomplished and interesting people have never, notwithstanding their acuteness, succeeded in grappling with mental or moral problems; their metaphysic is like their poetry—purely logical and purely *objective*.—A student with much leisure may still peruse Condillac with some interest; his writings—especially those on language—contain acute remark; but on the whole they are very wearisome.—In private life Condillac is said to have been estimable. He mingled with the *Encyclopædists*—those heralds of the revolution; but his habitual reserve kept him apart from politics, and from writing either on morals or religion. He was brother of Abbé Mably. [J.P.N.]

CONDORCET, MARIE JEAN ANTONIE, marquis de Caritat; an eloquent man, a good mathematician, an earnest political writer, and a victim of the reign of terror. Born in Picardy in 1748, he poisoned himself through dislike to the guillotine in 1794. The circumstances connected with his death are even affecting. Proscribed after the fall of the Girondins as an accomplice of Brissot, he found an asylum in the house of Madame Vernet; and there, with no aid from books, he wrote out his ‘Sketch of an Historical Picture of the Progress of the Human Mind.’ Every evening he gave his protectress the sheets he had written during the day; and it is said he did not even revise them. A new decree of the convention having threatened with death any one who should harbour a proscribed person, Condorcet resolved to leave Madame Vernet’s; and in spite of her entreaties he did so. Half naked he wandered for several days through fields; but, hunger prevailing, he entered an auberge at Clamont and was arrested. A dose of stramonium (the gift of Cabanis) concealed in his ring, set him free:—it is probable that he thought the right of the condemned Roman Noble, to choose the manner of death, not extravagant or unreasonable.—Like most literary men of that time in France, Condorcet was a materialist; nevertheless, his higher aspirations could not be silenced; one sees their vigour in the very wildness of his dreams concerning the perfectability of our Race. The ‘*Esquisse*’ will amply repay perusal. It is an exaggeration, and often false; but it abounds with penetrating appreciations of history; and the serenity which reigns through it—a serenity undisturbed by word of reproach or repining—deeply interests one in the doomed man. Condorcet’s best mathematical work is on the ‘*Calculus of Probabilities*’; his life of ‘*Turgot*’—perhaps that of ‘*Voltaire*’—is likely to last.—A worthy and affectionate *eloge* of Condorcet we owe to M. Arago. [J.P.N.]

CONFUCIUS, the philosophical Socrates, or rather demi-god of China. He lived about 550 years before Christ. His moral system seems in the main a *prudential* one; but its entire structure is scientific, and it pronounces much more determinately than any mere chronological record could do, concerning the antiquity of civilization in China. There are great ceremonial festivals in honour of Confucius, held through all China in spring and autumn. They approach as nearly to hero-worship as may be possible with this singular people.—A good analysis of the contributions of Confucius to philosophy is a desideratum; it could not fail to enable us to understand better, at once the history and the character of the remote East.

CONGREVE, WILLIAM, the second son of a Staffordshire gentleman, was born near Leeds in 1669. His father, who was in the army, being long stationed in Ireland, he was educated at Kilkenny, and at Trinity College, Dublin. He was entered at the Middle Temple, but speedily deserted law for literature, and for the pleasures of a gay life in London. His first comedy, 'The Old Bachelor,' which had remarkable success, was acted in 1693; and 'The Double Dealer' appeared the year after, and was followed by 'Love for Love.' His tragedy of 'The Mourning Bride,' played in 1697, gained for him a brilliant reputation as a serious dramatist; and his writings for the stage were closed in 1700 by his comedy 'The Way of the World.' He was perhaps lazy, perhaps disgusted by the ill success of this last play, perhaps alarmed by the severe denunciations of the immorality of the stage which were thundered forth by Jeremy Collier, and for which Congreve's comedies, though not the coarsest of their day, yet furnished perhaps stronger grounds than any others, through the coolly systematic immorality which is the staple of them all. In skill of construction, wit of dialogue, and liveliness in the portraiture of manners, these pieces are very admirable. His tragedy has as little real value as his other verses, though these were pretty numerous. He was placed in easy circumstances by places under government, bestowed by Lord Halifax; and was much esteemed, both as an agreeable companion, and as a friendly though prudent man. He died in London in 1729. [W.S.]

—Constable's landscapes are simple in character and composition, and peculiar in execution, having a spottiness which appears to have arisen from a habit of early sketching, when the dew was on the grass, an effect he constantly represents; his pictures improve by time. He always strongly affected originality of style; at the very commencement of his career, being asked by Sir George Beaumont what style he proposed to adopt, he replied, '—None but God Almighty's style, Sir George.' The neighbourhood of Hampstead was the chief arena of his labours.—(Leslie, *Memoirs of John Constable*, &c.) [R.N.W.]

CONSTANT DE REBECQUE, BENJAMIN.

There are few names in the political and literary history of France, since the first revolution, which present us with a more curious subject of speculation than that of BENJAMIN CONSTANT; but the leading facts of his career, and a very summary judgment upon them, is all that we can give in the space allotted to us. He was the descendant of a French family, denaturalized by the edict of Nantes, and was born at Lausanne, 1767. He came to Paris in the heat of the revolutionary period, and his philosophical spirit led him into

alliance with the most talented men of that epoch. In 1796 he brought himself into notice by a work entitled 'De la Force du Gouvernement Actuel de la France et de la Nécessité de s'y Rallier,' being an appeal in support of the directory. The year following he claimed the rights of a French citizen, and procured a decree which restored the descendants of the religious exiles of France to their proper country; increasing his literary fame about the same period by his treatises on political reaction, and on the effects of terror. Though an influential member of the political circle, M. Constant was not called upon to exercise any public function until the ascendancy of Napoleon was established, when he became a member of the tribunate, and aspiring to lead the opposition, was ordered to quit France in 1802. Madame de Stael, with whom he was politically connected, being ordered into exile at the same time, they left the capital together, and travelled over many parts of Europe, at length fixing their abode in Germany, where they cultivated an acquaintance with its rising literature, and enjoyed the intimacy of Schlegel. It was here that Constant wrote his famous work on the religious spirit, and the different modes of worship; his tragedy of 'Walstein,' &c.; and besides courting the muses, contrived to form an alliance with the daughter of the Prussian minister, Prince Hardenberg. On the fall of Buonaparte in 1814 Constant returned to Paris, but not only advocated the alliance of the Bourbons, as he hoped, with the institutions achieved by the people, but denounced in bitter language the conqueror, who was even then returning to reclaim his authority. By whatever arguments he was won over to the cause of Napoleon—and there is reason to believe they leave no stain on his patriotism—this singular politician figured as a counsellor of state during the hundred days, and though he quitted France at the crisis of the second restoration, he appeared again as a deputy under Louis XVIII. Benjamin Constant, Manuel, and Lafayette in the chamber of representatives (1819), boded no good to the royalists, and the murder of the Duc de Berry, followed by the discussion of the electoral laws, was the signal for a new conflict, and for that brilliant opposition which ended in the revolution of 1830. During this interval M. Constant, besides taking a leading part in the discussions of the chambers, contributed many political and other works to the literature of his country; and was also actively engaged as one of the editors of 'The Minerva.' The presumed cause of his death, which happened within six months after the abdication of Charles X., was the fatigue and exposure which he underwent during the tumults of July; and it is singular to add, that he closed his career by accepting favours from Louis Philippe. The problem for the biographer is to reconcile his loyalty to constitutional principles, and his cosmopolitan views with his versatile conduct as a politician. We are inclined to believe that he was *trustful* beyond what would be esteemed political propriety, and *hoped*, it may be, too much. Hence he was disposed to accept the *fait accompli*, and make the best of it, and only when his too generous expectations were disappointed, commenced those chivalrous attacks which appear so extraordinary in contrast with his *liaisons* in the camp of

the enemy. His philosophical refinement, his dramatic tastes, and his high sense of honour when placed on one side, in the scale of royalty as it was natural they should be, weighed too much against his political sagacity on the other. His romance of 'Adolphe,' also, shows that he thought it dangerous to resist the established opinions of the people; but what rule had he for ascertaining what should really be considered as established in scenes so changeable? CONSTANTINE VIII., is a title given to the son of Basil, the Macedonian, elected Augustus 868, and died before his father, 878. Some historians give the title to one of the sons of Romanus Lecapenus, d. 944 or 945.

CONSTANTINE IX. was associated in the empire with his brother BASIL II., by John Zimisces 969, and succeeded the latter 976, d. 1028.

CONSTANTINE X., emp. of the East, 1042-54.

CONSTANTINE XI., succeeded 1056, d. 1067.

CONSTANTINE XII., last emp. of the East, suc. 1448, and died gloriously in the defence of Constantinople, then taken by the Turks, 1453.

CONSTANTINE I., k. of Scotland, 458, d. 479.

CONSTANTINE II., suc. 858, k. in battle 874.

CONSTANTINE III., suc. 903, abdicated 943.

CONSTANTINE IV. usurped the throne, and was killed by the brother of Kenneth 1002.

CONSTANTINE, 'the African,' a Benedictine monk, known as a medical author, 11th c.

CONSTANTINE DE MAGNY, C. F., a critic of Savoy, au. of a commen. on Milton, 1692-1764.

CONSTANTINE, PAULOWITCH, grand duke of Russia and viceroy of Poland, elder br. of the emp. Nicholas, to whom he ceded the crown, 1779-1831.

CONSTANTINI, an Italian actor, d. 1729.

CONSTANTINUS, a poet and historian, d. 1614.

CONSTANTIUS, the *first* of this name, emp. of Rome and father of Constantine the Great, adopted and named Caesar by Maximian 292, Augustus 305, d. 306; the *second*, FLAVIUS JULIUS CONSTANTIUS, second son of Constantine the Great, born 317, made Caesar 323, emperor 337, d. 361.

CONTADES, L. H. ERASMUS, Marquis De, marshal of Fr., dis. in the wars of Italy, 1704-1796.

CONTANCIN, CYRIAC, a Fr. mis., 1670-1788.

CONTARINI, an illustrious family of Venice which gave seven doges to Venice from 1043 to 1670 and boasts of many ambassadors, cardinals, and men of letters. The most celebrated is GASPAR CONTARINI, papal legate to the diet of Ratisbon, and a philosophical writer, 1483-1542.

A black and white photograph of a large, rectangular, light-colored object, possibly a piece of wood or stone, with numerous small, dark, circular holes or indentations arranged in a grid-like pattern across its surface. The object is oriented horizontally and occupies most of the frame. The holes are small and dark, contrasting with the lighter background. They are arranged in a somewhat regular grid, though not perfectly aligned. The object has a slightly textured appearance. The background is dark and indistinct.

CONTARINI, J., a Venet. painter, 1549-1605.

CONTE, N. J., a French artist, mechanic, and chemist, attached to the Egypt. exp., 1755-1805.

CONTI, LOUISA MARG., princess of, celeb. for her beauty and brilliant talents, born 1577, died in exile 1631. The house of Conti was a younger branch of the princely house of Condé, and sprang from ARMAND DE BOURBON, 1629-1666. The line ended with LOUIS FRANCIS JOSEPH, lieutenant-general in the royal army, d. 1814.

CONYBEARE, JOHN, bp. of Bristol, au. of a Defence of Revd. Relig. against Tindal, 1692-1755.

CONYBEARE, JOHN JOSIAS, prof. of Anglo-Saxon and poetry, and author of many contributions to mineralogical and antiquarian science, 1779-1824.

COOK, CAPTAIN JAMES, was born at Marton, near Stockton-upon-Tees, 27th October, 1728. His father, who was an agricultural labourer and farm bailiff, apprenticed him at the age of thirteen to a haberdasher in Staiths, near Whitby. Disliking this business, and having a strong inclination for a sea life, he obtained a discharge, and entered into new indentures with a coal company at Whitby. In their employment he gained great practical knowledge of sailing, and soon rose to the situation of mate. Impressment for the navy was actively carried on in 1755; being then in the Thames, Cook at first hid himself to avoid the press-gang; but afterwards judged it best to offer himself as a volunteer. In 1759, by the interest of Mr. Osbaldiston, M.P. for Scarborough, and Capt. Sir Hugh Palisser he obtained the mastership of a sloop; and soon afterwards joined the fleet in the St. Lawrence, operating against the French. His judgment, bravery, and great skill in conducting hydrographic surveys, gained for him the highest credit, and secured his promotion. Returning home in 1762, he married Miss Elizabeth Batts, by whom he had a family of six children. In 1764 he was appointed marine surveyor of Newfoundland and Labrador; and was chosen three years after to command an expedition to the S. Pacific, sent out on the recommendation of the Royal Society, to observe an approaching transit of Venus over the sun's disc, in order that, by a comparison with observations at home, data might be obtained for a more accurate determination of the sun's distance. He was accompanied by Mr. Green as astronomer, Dr. Solander as naturalist, and a gentleman of fortune, Mr. (afterwards Sir Joseph) Banks. All the phenomena were successfully observed at Otaheite, on June 3, 1769. Cook then sailed S. in quest of the supposed southern continent; encountering New Zealand, he circumnavigated it; sailed up the E. coast of New Holland, and determined that it was not joined to New Guinea; thence he crossed to Batavia. Before reaching the Cape, Mr. Green, Dr. Solander, and twenty-eight other persons died. On June 12, 1771, the Endeavour came to anchor in the Downs; Cook's promotion to the rank of commander followed soon after. It was proved by this voyage that New Holland and New Zealand were not parts of the *terra australis incognita*; and that if such a continent did exist, it must be beyond the lat. of 40° S. The object of his second voyage was to circumnavigate the globe in high S. latitudes, in order to settle this question. Leaving on July 13, 1772, he was absent about three years, during which time he lost only one man by

sickness. He sailed S.E. from the Cape, and returned by Cape Horn; and was the first who traversed the S. Pacific; the highest lat. reached was 70° 10' S. The results of this voyage were most important, and excited a great interest among scientific men. He was now raised to the rank of post-captain, and appointed one of the captains of Greenwich Hospital, a situation of considerable emolument. In February, 1776, he was elected a fellow of the Royal Society, and soon after received the Copley medal for a paper on the methods used to preserve the health of his crews—which was thus adjudged to be the best experimental paper of the year. The second voyage having proved that if a *terra australis* existed, it was too far S. to be of any use—a question set at rest in 1842 by Captain James Ross's discovery of Victoria Land—attention was once more turned to the problem of a N.W. passage between the Atlantic and Pacific; and the act of parliament of 1745, which had offered a reward of £20,000 for the discovery, having been recently altered so as to include the king's ships, government proposed an expedition. Cook was entitled to repose; but having volunteered to take the command, his offer was accepted; and in the ship Resolution, accompanied by the Discovery, under Captain E. Clerke, Cook sailed from Plymouth in July, 1776. Passing from the Cape to New Zealand, and thence through the Pacific, he made many important discoveries, of which the chief was the Sandwich group, named after his friend the first lord of the admiralty. Early in the summer of 1778, he reached Behring's Strait; but was able to penetrate no farther than lat. 70° 44'. Having carefully surveyed the Aleutian group and adjoining coasts, he returned to winter in the Sandwich isles. On the 13th February, 1779, at Owhyhee, one of the boats was stolen by natives during the night. Next day active measures were taken to enforce restitution, and to prevent similar occurrences. For this purpose Cook attempted to carry the aged king on board, but on reaching the boats he refused to embark, and his wives set up a lamentation; at the same time a shot from one of the boats, fired to prevent a canoe leaving the bay, accidentally killed a chief. The crowd was roused to fury, and rushed upon Cook and his men; four of them were killed, the rest in the confusion could not render assistance to their commander, and he was overpowered, after a desperate and prolonged resistance. His mangled remains were treated with the greatest indignity, and his bones only were recovered by his attached and sorrowing crews. In the extent and value of his discoveries, Cook surpasses every other navigator; his surveys and determinations of latitudes and longitudes are extremely correct; he may be said, indeed, to have been the first scientific navigator. His success in preserving the health of his crews removed all dread of long voyages; and this was certainly not the least of his services. A pension was bestowed upon his widow. [J.B.]

COOKE, SIR A., tutor of Edw. VI., 1508-1576.

COOKE, BENJN., a comp. of music, d. 1814.

COOKE, GEORGE, an Eng. engraver, 1781-1834.

COOKE, GEORGE FREDERICK, the great tragic actor of the eighteenth century, and rival of John Kemble, whose supremacy he might have

successfully disputed, but for his own fatal habits of intemperance, was born in Westminster, 17th April, 1756. His father was an Irish officer and captain in the 4th Dragoons, but died while Cooke was yet an infant. His mother, on her widowhood, went to reside at Berwick-upon-Tweed, where her son received his school education. In the Town Hall of this place he saw the first play in his experience acted—it was 'The Provoked Husband'—the time either 1766 or 1767; and the circumstance made so strong an impression on his mind, that he began to study a part for himself, that of Horatio in 'The Fair Penitent.' In 1769 he joined a strolling company of players in a barn in the same town, and attempted Young Meadows, in 'Love in a Village.' From this time his passion for the stage increased, and at the age of fifteen he got to London, notwithstanding he was previously apprenticed to a printer; and afterwards, probably as midshipman on board of a king's ship, visited Holland. He was at all times a sedulous reader of plays, and a diligent playgoer. In 1774, and subsequent years, he witnessed in London the best actors of the time—Foote, Garrick, Macklin—and first appeared (1761) as a professed actor himself at Brentford in the character of Dumont. Next year he visited Berwick and Edinburgh, and in 1778 made his *debut* in London; but being neglected, retired with chagrin, to return in 1800 with decided triumph. During the interval he acquired those habits in the provinces which were the bane of his future life. Cooke was eight-and-thirty before he made good his position on a metropolitan stage, and this was at Dublin, which place he left, and enlisted as a soldier, from which Messrs. Banks and Ward, the managers of the Manchester theatre, procured his discharge; and after relieving the distress which his follies had brought upon him, sent him to Manchester. In 1796 he married a Miss Daniels of the Chester theatre, which marriage was afterwards declared null and void by Sir W. Scott in Doctors Commons.—Cooke's successful appearance in London was in the character of 'Richard III.' He was at that time in his forty-fifth year. He next performed 'Shylock,' 'Sir Archy MacSarcasm,' and 'Sir Pertinax MacSycophant,' in all of which he was unapproachably great. Cooke was exceedingly fine in sarcasm, and both in town and country became immensely popular, notwithstanding his irregularities and continual disappointment of his audience. In 1803 he became acquainted with Mr. Cooke, an American actor, who ultimately conceived the design of delivering Cooke from his vices, by changing the scene of his associations, and after much difficulty and some stratagem, got him safely across the Atlantic. The voyage, and necessary total abstinence from spirituous liquors, completely renovated the actor's health; and for some time he ran a triumphant career in the United States. Gradually, however, he relapsed into his former habits of fatal indulgence, and died at New York in 1812. Next day his remains were deposited in the burying ground of St. Paul's Church, where many years afterwards his grave was visited by Edmund Kean, whose character and genius closely assimilated, both in faults and merits, those of his predecessor, and who erected a tablet to his memory. COOPER, ANTHONY ASHLEY, first earl of Shaftesbury, disting. as a statesman and politics intriguer in the time of Cromwell and Charles II. born 1621, raised to the peerage 1672, d. 1683. He was a talented but dissolute man, and we are indebted to his administration for the famous *habeas corpus* act. His grandson and namesake, third earl of Shaftesbury, was the distinguished essayist and moralist. See SHAFTESBURY.

COOPER, SIR ASTLEY PASTON, Bart., 1768-1841, was the son of the Rev. Dr. Cooper, rector of Yelverton and Morley, Norfolk, under whom, and the village schoolmaster of Brooke, he received the elements of his education. In 1784, he became a pupil of his uncle, William Cooper, surgeon to Guy's Hospital, and, as soon as he was qualified, a lecturer at St. Thomas's on anatomy and surgery, and speedily acquired great reputation as an operating surgeon. In order to succeed his uncle at Guy's, he found it necessary to change his politics, which were previously liberal; and, very fortunately, a certain 'disagreeable sensation' about his throat, which he regarded as a prelude to his fate, added physical to his moral reasons for adopting this step. His important literary labours were his great work on Hernia (1807), his books on dislocations and fractures, and on the Anatomy and Diseases of the Breast. Sir Astley was principally distinguished as a bold operator, a decided practitioner, and as a most industrious and popular teacher. Perhaps no man has ever taught any branch of medicine who possessed more of this element of great success. His manners were of the most engaging kind, while his attention, urbanity, and regard for his pupils, were of the most exemplary character. He thus acquired a hold of the rising profession, which insured him the largest consulting practice probably ever enjoyed by any practitioner that ever existed, his annual income having been at one time £21,000. COOPER, JAMES FENIMORE, a celebrated American novelist, was the son of Judge Cooper,

and born at Burlington, New Jersey, in 1789. After successfully completing his studies at Yale college, he entered the American navy as a midshipman in 1805, and continued for six years. In 1810 he married, and quitted the navy, and commenced his brilliant career as a writer of fiction, and rapidly produced 'The Spy,' 'The Pioneers,' 'The Pilot,' and other novels, which excited great interest. In 1826 he visited Europe, and everywhere met with a most cordial reception. His works are throughout distinguished by purity, and brilliancy of no common merit. Died at Coopers-town, in the state of New York, in 1851.

COPERNICUS, NICOLAS, or ZEPERNICH, an illustrious astronomer, who restored the true system of the world as first proposed by Pythagoras, was born at Thorn, in Prussia, on the 19th Feb., 1473. His father was a surgeon, and his maternal uncle bishop of Ermeland. After taking his degree of doctor of medicine, with the view of practising the healing art, he devoted his time to the study of perspective and the art of painting; but in consequence of attending the mathematical lectures of Brudzevius, he entered with great zeal upon the study of astronomy. With this view he became the pupil and assistant of Dominic Maria, professor of mathematics at Bologna, and he subsequently went to Rome, where he taught mathematics and made astronomical observations.—Upon his return to his native country, he was appointed to a canonry in the chapter of Frauenberg, and chosen archdeacon of the parish of St. John's. His chief residence, however, was at Frauenberg, where he carried on his astronomical studies. In order to prove the annual motion of the earth, and the immobility of the sun in the centre of the solar system, truths of which he had conceived in 1507, he constructed a large quadrant, by means of which he made numerous observations, afterwards published along with those of Tycho in 1666. These observations were the basis of his new tables of the planets, and enabled him to complete, in 1530, his great work 'On the Revolution of the Celestial Bodies.'—Although the doctrine of the motion of the earth, and the immobility of the sun, published 100 years afterwards in Galileo's 'System of the World,' was denounced as a heresy by the Church of Rome, yet these great truths, when propounded by the canon of Frauenberg, were not only applauded by his friends, but adopted by the bishops around him. The cardinal Nicolas Schonberg, bishop of Capua, and Tydeman Gyse, bishop of Culm, urged Copernicus to publish his work, but, dreading the prejudices of the public, he resisted every application. He appears, however, to have taken measures for gradually bringing his system before the world. George Rheticus, professor of mathematics at Wittenberg, had resigned his chair in order to study the new system under Copernicus himself, and they appear to have adopted a method of communicating it to the public without any shock to their religious feelings.

In 1540 Rheticus published, without his name, an account of his friend's discoveries, but in consequence of its favourable reception by the public, he published a second edition with his name in 1541. Other writers followed in the train of Rheticus, and thus encouraged by the reception which his discoveries had met with, Copernicus placed the MS. of his work in the hands of Rheticus, who superintended the printing of it at Nuremberg, where it was published in 1543, at the expense of Cardinal Schonberg, bishop of Capua. Copernicus, however, was not permitted to read his own work. He received and handled a copy of it on the 22d May, 1543, a few hours before his death, which took place at Frauenberg, in the seventy-fourth year of his age, in consequence of the rupture of a blood vessel, and a paralytic affection of his side. His house at Frauenberg has been lately discovered and also his tomb, with spheres cut out in relief, in the cathedral church of the same town. 'It is impossible,' says Sir David Brewster ('Life of Copernicus' in *Edinburgh Encyclopædia*, vol. vii. p. 203, 4,) 'to survey the preceding sketch of the life and discoveries of Copernicus without being struck by the indifference with which the Church of Rome witnessed the propagation of a system so adverse to the principles of its faith. More than a century afterwards, when civilization and liberal sentiment had made considerable progress, Galileo was persecuted for holding the same opinions which Copernicus had propagated with impunity. We cannot allow ourselves to imagine that the church was less vigilant in 1530 than in 1634, or that the doctrine of the earth's immobility was less heretical at one period than at the other. We are therefore led to consider the persecution of Galileo rather as the consequence of his personal imprudence than of his astronomical opinions, and to imagine that the cardinals had seized the opportunity which the publication of his dialogues presented of gratifying a private resentment, which might possibly have been well-founded. Upon what other supposition can we account for the extreme severity of the church against the Pisan philosopher, and for its total indifference to the same crime in the canon of Ermeland? The publication of Copernicus's system gave no shock to the public mind; the religious feelings of no individual, and the watchful jealousy of no tribunal were alarmed. The most distinguished members, on the contrary, of the catholic church encouraged and promoted the propagation of the new system of the world. The cardinal Nicholas Schonberg pressed Copernicus to publish his discoveries. The bishop of Culm employed his influence in the same cause. The work was dedicated to the pope himself. The king of Holland even proposed him as a candidate for the vacant bishoprick of Ermeland; and thirty-eight years after his death, Cromerus, bishop of Ermeland, erected a monument to his memory. The charge of heresy was never preferred against Copernicus, either during his life or after his death; and we have never been able to discover that the slightest disapprobation had been either cherished or expressed by the church against his system of the universe. Had Galileo been canon of Ermeland, and Copernicus professor of mathematics, at this day reli-

gion would never have been degraded by the persecution of the philosopher, nor science afflicted at the ignominious compromise by which it was averted.' 'It is a singular fact,' says the same writer, 'in the history of Copernicus, that while he himself was zealously engaged in establishing a system in direct opposition to the faith of the catholic church, he should have viewed with indifference, and even with hostility, the great reformation which Luther was accomplishing in Germany. An edict was even issued by Maurice, bishop of Ermeland, in 1526, and signed by Copernicus and the other canons, the first article of which was directed against the exertions of Luther; and it is certainly a remarkable circumstance that the diocese of Ermeland, illuminated by the wisdom of Copernicus, should have preserved the catholic religion while all the surrounding provinces had embraced the doctrines of the reformation.' CORDAY, CHARLOTTE, properly **MARIANNE CHARLOTTE CORDAY D'ARMANS**. Charlotte Corday is one of those rare characters in history which it is impossible to contemplate without a feeling of enthusiastic admiration, and with respect to whom we are willing that the judgment should remain in suspense rather than conclude against the instincts of the heart. She was born at St. Saturnin, near Séez, in Normandy, 1768, and, as her name testifies, was the daughter of a family belonging to the higher classes of society. She was educated in the retirement of a convent, but having a fine understanding and indomitable spirit, she seems to have followed the bent of her own genius, and formed her mind to the classic models of antiquity. In the bosom of her family she pursued these studies with unabated enthusiasm, and as the progress of the revolution, and the dispersion of the Girondins, made her acquainted with a Louvet and a Barbaroux, it is not surprising that her attention was excited by the spectacle of the squalid, blood-thirsty Marat presiding at the sacrifice of all that was noblest and worthiest of her heart's love in her poor country. It has been said that she struck the blow which has rendered her name immortal in revenge of her lover, M. Belsunce, one of the officers in the garrison of Caen, but this supposition is far from well-founded, and we prefer for many reasons her own declaration:—'I killed one man to save a hundred thousand; a villain (un scélérat) to save innocents; a ferocious wild beast to give repose to my country!' How she effected her purpose, and how she paid the sad penalty afterwards, we are under the ne-

cessity of relating in few words. Her resolve was formed, as she declared at the bar of Fouquier Tinville, after the proscriptions of the 31st of May, 1793, which is sufficient of itself to prove that she was not moved to it by the murder of M. Belsunce, who was killed in 1790, though it cannot be doubted that the appalling manner of his death must have affected her with a lasting horror of the excesses of sansculottism. She left home secretly, and arrived at Paris on the 9th of July, with an introduction to Duperret, with whom she transacted some business connected with certain family papers in the course of the next day or two. On Saturday the 13th she purchased a large knife, and at seven o'clock in the evening procured admittance to Marat with this weapon concealed under her garments. She had obtained this interview by writing to him that she was from the seat of rebellion, and would 'put it in his power to do France a great service.' Marat was in his bath, with a stool by his side to write upon, and entering into conversation with Charlotte, he penned with ferocious joy the fresh list of victims with which she pretended to supply him. At the instant when he turned aside, muttering of the chastisement they should receive, Charlotte with desperate determination, plunged her knife into his heart. Her aim was so sure that the monster could only exclaim as he choked with blood,—'A moi, ma chère amie je me meurs,' (Help dear, I am killed!) and instantly expired. It would not be easy to exaggerate the sublime attitude of this beautiful young girl, with her long dark hair and flushed cheek for one moment, and how submissively the next she surrendered herself to the gendarmes. Her self-possession, sincerity, and maidenly modesty at the trial, were marvellous in the midst of the tumult that agitated Paris. The evidence was prepared, and Tinville commenced the proceedings by addressing some questions of form to Charlotte:—'All these details of form are needless,' she said. 'It was I who killed Marat.' 'What instigated you?' 'His crimes.' 'What do you mean by his crimes?' 'The ill that he has done to France since the revolution, and which he would yet do.' 'By whom was this assassination suggested to you?' 'I alone concluded upon it.' 'What are the refugee deputies doing at Caen?' 'They are waiting till the end of anarchy shall enable them to return to their posts.' 'Was it to a sworn or an unsworn priest that you were accustomed to confess at Caen?' 'I neither confessed to the one nor the other.' 'What end did you propose to gain by killing Marat?' 'To put an end to the troubles of the French people.' 'How long since did you form this project?' 'Since the proscription of the deputies of the people on the 31st of May.' 'It is from the journals, then, that you have judged Marat to be an anarchist?' 'Yes; I knew that he had brutalized the French.' And then, raising her voice to prevail over the confusion which arose in the hall:—'J'ai tué un homme pour en sauver cent mille; un scélérat pour sauver des innocents; une bête féroce, pour donner le repos à mon pays. I was a republican before the revolution, I never wanted energy.' 'What do you mean by energy?' 'I mean by energy the feeling of those who are willing to forget their own interests for the sake of their country.' Such an-

vers astonished her judges, and under the circumstances they are the signs of no ordinary understanding. It is not surprising that many took off their hats as she went to the place of execution, clothed as a murderess in a red smock, and that the young man should propose the erection of a monument to her memory, with the inscription, 'Greater than Brutus!' She was guillotined, 7th July, 1793. [E.R.]

CORELLI, ARCANGELO, called the founder of the Roman school of music, was born at Fusignano in the Bolognese territory in 1653. He is said to have received his instruction in composition from Vincinelli, and on the violin from Bassoni of Bologna. In 1672 he was in Paris for a short time, but made no impression. In 1680 he visited Germany, and was in the service of the duke of Bavaria. He returned to Rome in 1682, and between his year and 1694, when he was principal violinist at Rome, he published his celebrated sonatas for violin and violoncello. From that period up till almost the present time, these sonatas have been amongst the first studies which the great masters of the violin have put into the hands of their pupils. His greatest works, the Twelve Concertos, were long known before they were printed. Corelli died at Rome on the 18th January, 1713, and was buried in the church of Santa Maria della Rotunda (the ancient Pantheon), where a monument, surmounted with a marble bust, was erected to his memory. Corelli was amiable and gentle in his manners, and his feelings were as remarkably sensitive. He received the surname of *Il Divino* from his Italian compatriots, and was usually called *'Jamossimo professore di violin.'* [J.M.]

LUDOVICO, another member of the family, is celebrated for his great age, and works on regimen, 1467-1566; and LUCRETIA HELENA, as a poetess and learned writer, 1646-1684.

CORNEILLE, a pope of Rome, 251-252.

CORNEILLE, MICHEL, a French painter and engraver, 1601-1664. His son, of the same name and profession, 1642-1708. A second son, JEAN BAPTISTE, also a painter, and writer on the art of painting, 1646-1695.

CORNEILLE, PIERRE, named 'The Great' by

his admiring contemporaries, was the first, in the order of time, among those brilliant writers who did honour to France during the reign of Louis XIV. He had not been preceded by any dramatic writer whose genius was powerful enough to preserve his name in general remembrance; and, himself preceding Molière by a good many years, and Racine by a whole generation, he learned not in part, and obeyed with reluctance, those formal rules which French critics were beginning to teach, and to which the French drama was gradually submitting itself. His countrymen are often much at a loss to reconcile their dislike to his irregularities in form, with the pride they feel in his well-won fame, and the impression which they cannot help receiving from his magnificent pictures of heroically idealized nature.—Corneille, born at Rouen in 1606, was the son of a lawyer, and himself attempted the same profession. But as early as his twenty-third year, he entered on an uninterrupted course of devotion to dramatic composition. His first attempts were six rhymed comedies, and the strong but declamatory tragedy of 'Médée.' These pieces were received with applause in a time when there was nothing better, but are now admitted to have been so feeble as to give but poor presage of the strength which worked within him. He was saved from prosecuting this career by being imprudent enough to offend Cardinal Richelieu, who had chosen him as one of the men of genius who were to found his French Academy. Retiring to Rouen, he turned his thoughts to tragedy, and studied the Spanish language to have at his command the dramatic stores which it already possessed: an old courtier, who happened to have sought repose in Normandy, is said to have been his adviser on both points. The fruits appeared in 1636, when he presented his romantic tragedy 'The Cid.' Its success was prodigious, and was at length allowed to be deserved, even by the academicians who wished to flatter the resentments of Richelieu. It is the most famous, and perhaps the greatest, of all Corneille's works. It is alike admirable for its skill of construction, its chivalrous dignity of sentiment, and the dramatic power with which it depicts the conflict of opposing passions. The poet, however, was sneered at for having freely borrowed incidents and ideas from a Spanish play; and he threw himself boldly on his own resources in his next two works, which stand, with the 'Cid,' among his masterpieces. In 'Horace' he dramatized, with a defective plan, but with great force of passion, and several very striking bursts of sentiment, the Roman combat of the Horatii and Curatii; and on 'Cinna,' celebrating Augustus and the Romans of his age, he bestowed an artful dexterity of management which has recommended it, in spite of its artificiality of feeling, to the especial favour of the French critics. These two fine works, appearing in 1639, were immediately followed by a worthy successor, the 'Polyeucte,' a tragedy of Christian martyrdom. Soon afterwards came 'La Mort de Pompée,' which is fine in some parts; and 'Le Menteur,' the only one of its author's comedies that is held worthy of him, and pronounced to have been the earliest comedy of intrigue and character which did credit to French literature. It was imitated from the Spanish, and has itself

been imitated in English by Steele and translated by Foote. 'Rodogune' was thought by the poet to be his best work; and its fifth act is declared by Voltaire to be the finest effort of the French drama. More philosophical critics detect, in this imposing tragedy, traces of that over-charged and unnatural turn of thought and sentiment which began to show itself more and more in Corneille's plays, and which, with not unfrequent feebleness, indicated that the rich mine was nearly wrought out. The acknowledged failure of 'Pertharite' in 1653, warned him to pause; and for six years he produced nothing but a versified translation of Thomas à Kempis. Nor did he add to his fame by the few works which he produced after returning to the stage in 1659. These, though not without flashes of the ancient energy, are acknowledged to be on the whole weak; and they abound in those argumentative and declamatory orations, the occasional intrusion of which into his best plays is confessed by his most favourable critics. Among the critics of Corneille, he himself must be numbered with honour. The remarks which he published with several of his earlier pieces, contain some admirable criticism. In private life he was an unassuming and plain man, who was always most at his ease in the bosom of his own family. He died in 1684.—His younger brother, THOMAS, though now forgotten, was in his day a very popular dramatist, and famous for his readiness of versification. The two brothers, whose wives were sisters, lived in the same house; and it is said that, when Pierre wanted a rhyme, he used to lift a trap-door and call on Thomas for assistance. [W.S.]

CORNWALLIS, SIR CHARLES, an English ambassador time of James I., d. 1630. His son, WILLIAM, author of essays published 1632.

CORNWALLIS, CHARLES, Marquis Cornwallis, was born 31st Dec., 1738. He entered the army early, and obtained deserved promotion and credit in the last campaign of the seven years' war. He served actively and honourably as major-general under Howe and Clinton in the first year of the American war, and in 1780 he held an independent command. He gained several victories, but was at last shut up and besieged in York Town, where he was obliged to surrender himself and his army, after an obstinate and gallant defence, on October 19, 1781. In 1786 Lord Cornwallis went to India as commander-in-chief and governor-general. He signalized his rule there by the military advantages that he gained over Tippoo Saib, and by his honesty and vigour as an administrative reformer. After his return from India he was, in 1798, made lord-lieutenant in Ireland, where he put down the rebellion that he found raging there. His humanity and his skill in civil government did more even than his military

talents towards restoring order in that unhappy country. In 1805 he was a second time made governor of India; but his health was now shattered. He was suffering severely when he landed at Calcutta; but he exerted himself usefully in the introduction of several salutary measures in the civil department of the Indian service; and then endeavoured to put himself at the head of the army, which was actively engaged in the upper provinces. But the old warrior's strength failed him, and he died at Ghazepore, on his way to head-quarters, on 5th October, 1805. [E.S.C.]

CORREGGIO. ANTONIO ALLEGRI, commonly called CORREGGIO from his birth-place, was born about 1493-4, and appears to have first studied painting under Tonino Bartolotto of Correggio; in 1519 he was established as a painter at Parma. The celebrated cupola of Parma was commenced in 1520, and in 1522 Correggio undertook the great works of the dome of the cathedral; in the former representing the ascension of Christ, and in the latter, the assumption of the Virgin, both of which series are now admirably engraved by the Cav. Toschi. The frescoes of the cathedral, left unfinished by Correggio, were completed by his pupil Giorgio Gandini. Correggio died of a fever at his native place in 1534, in his forty-first year only.—Correggio's great reputation rests chiefly upon the above mentioned frescoes, but he had executed many excellent oil pictures before he proceeded to Parma in 1519. All his pictures are conspicuous for a remarkable play of foreshortenings, a powerful and delicate chiaroscuro, or light and shade, and a graceful grouping of forms.—The 'Notte,' or night, of Correggio, in the Gallery of Dresden, is a picture of the nativity of Christ, in which the light proceeds from the body of the infant Saviour.—(Pungileoni, *Memorie storiche di Antonio Allegri detto il Correggio*, Parma, 1827-21. *Sketches of the Lives of Correggio and Parmigiano*, London, 1823.) CORTREAL, JOHN VAZ COSTA, a gentleman of the household of Alphonso V. of Portugal; he is said to have discovered Newfoundland about the year 1463. His son, GASPAR, sailed from Lisbon in the year 1500, and discovered Labrador and Greenland. In May, 1501, he again left Lisbon, with two ships, in hopes of finding a N.W. passage to India; a storm separated the ships on the coast

of Greenland; Cortereal's vessel was never heard of, though the other returned in safety. His brother, MICHAEL, went in search of him the next year, with three ships; these separated in order to examine the coast more closely, agreeing upon a certain rendezvous. Two of them kept the appointment; Cortereal and his vessel were never heard of again. VASCO, the last of the family, master of the household, was anxious to go in search of his lost brothers, but the king would not yield to the most earnest entreaties. [J.B.]

CORTEZ. HERNANDO CORTEZ was born of an ancient Spanish family in Estremadura, in 1485. At the age of nineteen he left Spain, like many of the adventurous youths of that period, to seek fame and fortune in the new world, that had been discovered beyond the Atlantic. He distinguished himself under Velasquez, in the conquest of Cuba; and after passing several years in that island, where he was sometimes the favourite of the viceroy, and sometimes the special object of his jealousy and persecution, Cortez obtained leave from Velasquez to conduct a small expedition to the newly-discovered coast of Yucatan and Mexico. With less than 600 soldiers, with 16 horses, 10 cannons, and four falconets, Cortez sailed, in 1519, to conquer the most powerful empire in America. Cortez landed on the Mexican coast on Good Friday, the 21st of April, in that year, on the spot where the city of Vera Cruz now stands. He persuaded his followers to destroy their ships, and to march inland, with no prospect but to succeed or perish. The Indian republic of Tlascala lay between him and the Mexican capital. Cortez defeated the Tlascallans, when they attacked him, and then succeeded in winning their friendship. They acted thenceforth as his zealous and faithful allies. Alarmed by the reports of the prowess of the Spaniards, and of the superhuman terrors of the arms which they wielded, Montezuma, the Mexican emperor, sought to conciliate the Spaniards, and received Cortez and his troops in the capital. Though they obtained lavish presents, and courteous treatment, the treasures which they saw around them inflamed more and more the cupidity of the invaders. The sight of the idolatrous rites, and especially of the human sacrifices which the Mexicans practised, inflamed their religious bigotry; the ambition of Cortez thirsted after absolute conquest, and, by a bold stroke of treachery, he seized the person of the Mexican emperor. Cortez, soon after this, received a material increase of strength, from a force which the viceroy of Cuba had sent to depose him and take him prisoner, but which he partly defeated, and partly persuaded to come over to him. But he now found himself plunged into a most desperate war with the native Mexicans, who rose upon the Spaniards, and assaulted them in their fortified quarters in the capital. The Mexicans strove with equal courage, and infinitely preponderating numbers, against the superior weapons and discipline of the Europeans, who throughout the struggle were gallantly supported by their Tlascalcan confederates. Cortez was now at last obliged to evacuate the city; and on the night of the 1st July, 1520 (the *Noche Triste* of the Spanish historians), Cortez and his shattered force, with difficulty, and severe loss, made good their retreat from Mexico. Encouraged with this suc-

cess, the Mexicans followed the Spaniards, and fought a pitched battle with them in the open field. In this battle (the battle of Otumba), Cortez gained a complete victory, which was mainly due to his own prowess; as in the very crisis of the battle, which was turning against the Spaniards, Cortez personally charged the Mexican general, and slew him with his own hand. After resting and reorganizing his army among the Tlascalans, and receiving some reinforcements, Cortez again advanced upon the Mexican capital. Guatemozin was now emperor of Mexico, and had learnt the inability of his troops to face the Europeans in the open field. He remained within the city, which Cortez besieged. The geographical position of the city, and the great numbers of native allies who now served under him, enabled Cortez to establish a strict blockade. Many assaults were made, and met with various fortune. Fire and the sword swept away thousands of the Mexicans, but famine was their most fatal foe, and Mexico, on the 13th August, 1521, surrendered, and the whole of its vast empire became subject to the crown of Spain. Cortez disgraced his triumph by putting the brave Guatemozin to a cruel death, an act of which he is said to have afterwards deeply repented. The domestic enemies of the conqueror of Mexico had been busy in their intrigues against him in the Spanish court, and in 1528 Cortez returned to Spain to face his accusers. He was coldly received, though with apparent honour; and he could not prevail on Charles V. to continue him in the governorship of Mexico. He returned to America in 1530, a powerful and wealthy noble, but without public authority. He now signalized himself in the arts of peace, in the skilful culture of his ample estate, in the introduction of the sugar cane, and the importation of merino sheep into the province. He made also several brilliant and important voyages of discovery along the Californian and other coasts of the Pacific. In 1540 he finally returned to Spain, where he was treated by his sovereign with ungracious neglect. Cortez died near Seville, in 1547, in the sixty-third year of his age. [E.S.C.]

COUTHON, GEORGES, is one of those problematical characters in the French revolution upon whom it is difficult to pass judgment, though nothing is easier than to call them hard names, and to hold them up, in general terms, to the execration of mankind. He was born in 1756, and was president of the tribunal at Clermont when the revolution broke out; and though his lower extremities were paralyzed, so that he was compelled to speak sitting, he had been remarkable for his eloquence as an advocate. His first act as a member of the legislative assembly was to procure the abolition of the forms which distinguished the king as sovereign, declaring at the end of his address that 'He would have no other majesty than the Divine majesty and the majesty of the people.' As a member of the convention he voted for the death of the king without appeal and without delay. He acted with the party of the Mountain, and was mainly instrumental in the overthrow of the Girondins, and on the 2d of June proposed the arrest of the twenty-two deputies, and of the ministers Clavière and Lebrun. His conduct on all these occasions procured his election to the *Comité de Salut Public*, where he acted with St. Just and Robespierre. It was upon his proposition that the convention declared the English government to be guilty of '*lèse-humanité*,' and that Pitt was the '*enemy of the human race*.' He was at the taking of Lyons, and devoted many of its fine buildings to destruction, for which purpose he was carried from place to place in a chair, bearing a wooden mallet, with which he struck the unfortunate edifice, repeating the formula, '*La loi te frappe*,' (the law strikes thee,) after which the work of destruction might be commenced. The charge of cruelty made against him is founded principally on the decree, of which he was the author, for facilitating arrests, and giving new vigour and facility to the revolutionary tribunal, known as the decree of the 22d Prairial; but it is some answer to this, if Robespierre's opinion of his friend is worth anything, that when Couthon was proposed to him for a new commission among the disaffected, he answered contemptuously,—"Bah! he cried like a woman over the punishment of the rebellious Lyonnese!" It is certain that the words of Couthon may often be cited against him, as the test, for example, which he gave when the Jacobins were to be purged of all but the ultra democrats, '*What hast thou done to be hanged* if counter-revolution should arrive?' but the question is, what these words really implied *under the circumstances*, and with what degree of earnestness were they uttered? Couthon was faithful to Robespierre to the last; and on the 9th Thermidor endeavoured to kill himself with a poignard, but wanted nerve, and was carried bleeding to the guillotine. His features were mild and pleasing, and his expression remarkable for good-nature. [E.R.]

COWPER, WILLIAM, was the grand-nephew of the Lord Chancellor Cowper, and grandson of a judge in the Court of Common Pleas. His father was rector of Great Berkhamstead in Hertfordshire; and there the poet was born in 1731. After having spent two years of misery in a country school, he was placed at Westminster School, where he remained, comfortable and lively, till he was eighteen years old. He was then articulated to a solicitor in London, was called to the bar in 1754, and resided in the Middle Temple for eleven years, neglecting law, contributing a few papers to 'The Connoisseur,' and gradually exhausting his little patrimony. In 1763 one of his powerful kinsmen appointed him to two clerkships in the House of Lords. Doubts of his competency, and the fear of appearance in public assemblies, developed the tendency to insanity which lurked within him. He made several attempts to destroy himself; and was consigned for eighteen months to a lunatic asylum at St. Albans. On his release in 1765, subsisting on the remnant of his property, with assistance from relatives, he took up his residence at Huntingdon, and became a boarder in the house of Mr. Unwin, a clergyman. That gentleman dying two years afterwards, the widow and Cowper removed to Olney in Buckinghamshire. John Newton was curate of the place; and his religious views accorded with those which had been adopted by the poet. In 1776 appeared the 'Olney Hymns,' of which some of the best were furnished by Cowper; but it was only about the time of their publication that the unhappy poet was freed from a second confinement, which had lasted for nearly four years.—Mrs. Unwin, anxious to engage his mind safely, urged him to prosecute verse-making. 'The Progress of Error' was written; 'Truth,' 'Table-Talk,' and 'Exposition,' followed it; and these with other poems made up a volume, which was published in 1782, receiving the approbation of Johnson and other critics, but meeting little attention from the public. The poet's fame, however, was decisively established by his next volume, which, appearing in 1785, contained 'The Task' and other poems. The publication of 'The Task,' indeed, was an era in the history of English poetry. It was the point of transition from the eighteenth century to the nineteenth. Natural language was substituted for artificial; themes of universal interest were

handled, instead of such as told only on a few cultivated minds; even the seriousness and solemnity of the leading tone had a striking attraction, while it was relieved both by strains of pathos and touches of satiric humour. More novel and original than anything else were those minute and faithful delineations of external scenery, to which no parallel had been seen since the 'Seasons.' Perhaps, also, the didactic form of Cowper's poems, giving them an equivocal character which hovers continually between poetry and argumentation, was an additional recommendation to readers who had long been unaccustomed to the finer and higher kinds of poetical invention.—Cowper now spent six years on his translation of Homer, which appeared in 1791. The neglect which it has experienced is certainly undeserved, at least by his 'Odyssey.' His mental alienation, which had repeatedly threatened him with a return, overcame him completely in 1794; and the last six years of his life produced hardly any literary fruits except the pathetic 'Castaway.' The death of his dear friend Mrs. Unwin, in 1796, threw him into a gloom which was hardly ever again dispelled, and he died in 1800. [W.S.]

[Birth-place of Crabbe.]

CRABBE, GEORGE, a poet whose truth to nature and strength of homely pathos atone for deficiency in ideal elevation, was born in 1754, at Aldborough in Suffolk, where his father was collector of salt duties. He went through an apprenticeship to a surgeon, and for a short while attempted practice; but, always attached to letters rather than business, he had little success, and came to London in 1780 to seek his fortune. When the

failure of his first poem, 'The Candidate,' had reduced him to great distress, and when no attention had been paid to his appeals to distinguished persons locally connected with his birth-place, he boldly laid his case before Edmund Burke. This great man read his manuscripts, received him into his house at Beaconsfield, and introduced him to his friends; and the poem of 'The Library,' published on his recommendation, was received with great applause. His reputation was increased by 'The Village,' which appeared in 1783; and the publication of 'The Newspaper' in 1785, closed the first series of his works. In the meantime, orders having been obtained for him, he became chaplain to the duke of Rutland, married happily, and received in succession several moderate preferments. In 1807 he published 'The Parish Register,' to which were added 'Sir Eustace Grey,' and other small poems; and 'The Borough,' the most various and energetic of his works, made its appearance in 1810. In 1813, soon after the death of his wife, he was presented to the living of Trowbridge in Wiltshire, where he spent the remainder of his quiet and honourable life. His 'Tales of the Hall' were published in 1819. His death took place in 1832. [W.S.]

CRANMER, THOMAS, was born at Aslacton in the county of Nottingham on the 2d July, 1489. He entered Jesus College in 1503, became a fellow in 1510-11, and a doctor of divinity in 1523. His opinions on the first marriage of Henry VIII. with his brother's widow introduced him to the king. The favourite's multifarious efforts were in vain to procure a divorce from the papal authorities; but as a reward for his services, though he had been twice married, he was raised by royal favour to the see of Canterbury. On 23d May, 1533, the archbishop declared the king's marriage to be null and void, and five days afterwards he married Henry to Anne Boleyn. Cranmer now became occupied with more meritorious work, the translation of the Bible, and the great work of the English reformation. At Henry's death, he was one of the council of regency to Edward VI., and a liturgy, homilies, and articles were composed under royal patronage. When the young monarch died, and Mary at length ascended the throne, Cranmer, who had been drawn

into the plot on behalf of the Lady Jane, was summoned before the council, then committed to the Tower, and finally sent to the prison of Beccard at Oxford. He was at length, by Pope Paul IV., declared guilty of heresy, &c. On the 20th of March, the night before his martyrdom, he was entrapped into a written recantation. On the next day, in St. Mary's church, he solemnly declared 'that his hand had offended in writing contrary to his heart.' 'My hand,' said he, 'shall first be punished. For if I may come to the fire, it shall first be burned.' When he was brought to the stake, erected opposite Balliol College, he fulfilled this resolution with a marvellous and unexpected intrepidity, still crying 'this unworthy hand!' But there was a sad infirmity in Cranmer's nature, and his great faults were an apparent vacillation and a want of decision and firmness. Yet he was honoured to do a great work in his time. 'He was at once,' says Macaulay, 'a divine and a courtier,' and the attempted combination of the two characters created those inconsistencies which soiled the purity of his life, and detracted from the merit of his actions. clownish deportment. Though he had been elected to the brief parliament of 1628, it was not till 1640 that he was known in the House of Commons, and Sir Philip Warwick, who observed his rise, has left a curious notice of his personal appearance. His apparel, he said, was very ordinary, 'for it was a plain cloth suit, which seemed to have been made by an ill country tailor. His linen was plain, and not very clean, and I remember a speck or two of blood upon his little band, which was not much larger than his collar. His hat was without a hat-band. His stature was of good size; his sword stuck close to his side; his countenance swollen and reddish, his voice sharp and untunable, and his eloquence full of fervour.' He had been for some years establishing an influence with the puritan party, who frequented his house and bowed to his strong judgment. He showed his great business capacities in the struggle of the long parliament, but it was not until the parliament raised a military force, to which he brought a troop of horse, that his powers of organization and command were fully developed. He speedily rose to authority as lieutenant-general of the horse, and when he was specially exempted from the self-denying ordinance, so that he could both deliberate in parliament and hold command, he became the most powerful man in the country. He showed his eminent sagacity in reconstructing the army, and infusing into it high spirit along with stern discipline. At the battle of Naseby in 1645 it was seen in the signal destruction brought on the well-officered royal army, how effectively he could strike with the weapon he had constructed. His military policy throughout was to despise secondary means and ends, but to invest himself with overwhelming power and crush his enemy. He saw the large share which artillery must bear in warfare, and anticipated modern generals in fostering that destructive arm. His repeated victories over the royalists, his establishment of the predominance of the army over parliament, and of the independents over the presbyterians, his relentless exertions to bring Charles I. to the block, and his dismissal of the parliament, are all great events in the history of the day, which cannot be narrated with sufficient distinctness without much detail. In 1649 he conducted an exterminating war in Ireland, instigated by the ferocious principle that whatever human being opposed him should be put to death. In Scotland, where he saw there were more suitable materials for the sort of government he desired, he was rather a pacificator than an oppressor. It was on the 16th of December, 1653, that he took the title of Lord Protector, and became virtually king of Britain, and a king who submitted to very little constitutional restraint. How far he was sincere in the religious convictions by which he professed to be led, has been matter of endless debate, and as a secret buried with him who alone possessed it, it may occupy controversy to the end of time. That he was under powerful religious impulses cannot be doubted—the question arises as to the extent to which he really believed that by their power alone, and by no promptings of worldliness, he was driven on in his ambitious career. He was an enlightened internal reformer, and established many ministerial improve-

CROMWELL, OLIVER, the Protector, was born in the town of Huntingdon, on the 25th of April, 1599. His father was Robert Cromwell, a cadet, of a family possessed of a baronetcy, and his mother being a daughter of Sir Richard Stewart, Cromwell has often been made to show that he was connected with the royal family. He spent a dissolute and extravagant youth, interrupted by serious misgivings, which brought him at last to stern self-condemnation. When twenty-one years old he married Elizabeth, the daughter of Sir Thomas Bourchier, and thus, both by descent and alliance, he was a member of the higher country gentleman class, or of the nobility as it would be termed in other European countries. In that age, however, refinement was only kept up by attendance in court, and Cromwell, who lived away from town and followed country pursuits, became a man of

ments which subsequent governments were compelled unwillingly to follow. His latter days were spent in anxiety and depression, if not remorse, and he died on 3d September, 1659. [J.H.B.]

CUDWORTH, RALPH, principal of Christ College, Cambridge; a philosopher of considerable eminence, and prodigious learning. Born in Somerset in 1617, died in 1688. Cudworth's life was an unceasing protest against Hobbes; and the theme he proposed to himself was, very suitably, a defence of Human Liberty. He recognized three kinds of Fatalism—equally destructive of responsibility, and of the foundations of Morals: *first*, Fatalism purely materialistic, suppressing, with the notion of human Liberty, the idea of God, and the reality of spiritual existences—explaining all phenomena, mental and physical, by concourses of atoms: *second*, that theological Fatalism, common enough in all ages, which resolves good and evil, justice and injustice, into the simple and arbitrary *will* of God: *third*, the fatalism of the Stoics, which confounds Providence with the laws of Necessity,—regarding everything as inflexibly pre-ordained. Cudworth's protest against the first description of Fatalism, or his refutation of materialistic Atheism, occupies his ponderous 'Intellectual System of the Universe;' and his effort to rescue the foundations of Right and Wrong from arbitrariness, constitutes the 'Immutable Morality.' He did not live to complete his task by a similar attack on the Stoical, or ultra-Calvinistic form of hostility to human spontaneity. The 'Intellectual System' especially, is a very storehouse of information concerning cosmogonic speculation; nor will the reader fail to detect throughout, marks of independent, and even original thought. It contains, for instance, the germ of the modifications afterwards proposed by Leibnitz, on the argument of Des Cartes, for the being of a God. (See article DES CARTES.) The fault of all the writings of Cudworth, is their too much learning; his positions are overlaid. His works were at first published in folio: an edition of the 'Intellectual System' in 4 vols. 8vo, has been recently edited by Birch.—Cudworth merits a high place in that class of English divines in which we find the names of Gale, Thomas Burnet, and Henry More.

CULLEN, WILLIAM, M.D., 1712-1790, was one of the most remarkable physicians which our country has produced, and took a principal share in elevating the mere art of the practitioner into a science. He was born at Hamilton, Lanarkshire, where his father was chief magistrate. Serving an apprenticeship with a surgeon in Glasgow, after the manner of Roderick Random, young Cullen made several voyages to the West Indies as surgeon in a London trader; but tiring of the monotony of such employment, he settled as a country practitioner at Shotts, in his native county. There he made the acquaintance, and entered into partnership with Dr. William Hunter, who afterwards became so distinguished in London, and here he likewise drew towards him the attention of the duke of Hamilton, to whom he was indebted for being placed in a position which enabled him to exhibit his natural powers. By the terms of agreement between Cullen and Hunter, it was stipulated that each alternately should be allowed to study during the winter session at some college; Cullen chose Edinburgh, and Hunter London; an arrangement which soon terminated their association, as the latter, having obtained employment from Dr. Douglas, never returned. Cullen, who had graduated, was appointed lecturer on chemistry in the university of Glasgow, in 1746, and was afterwards placed in the chair of medicine. But, if we are not mistaken, he also occasionally lectured on chemistry, as we have seen a letter from him to the faculty of the college offering to lecture on chemistry if £30 were given to pay the expenses of the course, and ill-advised parsimony was not the characteristic of that learned body, and Dr. Cullen, on his removal thither, first occupied the chair of chemistry, and subsequently that of medicine. His views of medicine, his enthusiastic love of his profession, his kindness of heart, and his remarkable talents, soon gave an impetus to the scientific study of medicine, which is still felt at the present day. His students not merely respected him as a man of science, but they loved him as one who saw into their hearts, and who, sympathizing with their defects, smoothed their path of study. The important works of Cullen were his 'Nosology,' and his work on medicine, both of which are characterized by admirable arrangement, careful selection, and well-considered deduction—truly wonderful when we consider the limited field of the medical sciences when Cullen wrote. CUMBERLAND, the name of an Engl. dukedom, reserved for the younger members of the royal family. The most noted of this title is WILLIAM AUGUSTUS, son of George II., cel. as commander at the victory of Culloden, 1721-1765.

CUMBERLAND, RICHARD, an Engl. prelate of great learning, au. of 'De Legibus Naturæ,' written in opposition to Hobbes, to prove that there is a natural code of morals, 1632-1718.

CUMBERLAND, RICHARD, was the great-grandson of Bishop Cumberland, the author of the treatise 'De Legibus Naturæ.' His mother was a

daughter of the celebrated Richard Bentley, and the heroine of Byrom's pretty pastoral, 'My time, O ye Muses.' His father, a respectable English clergyman, was, for some years before his death, an Irish bishop. Richard Cumberland was born in his grandfather's house at Cambridge in 1732. He was educated at that university, took his degree as tenth wrangler, and held for some years one of the two lay fellowships of Trinity College. His family withdrew him from his clerical studies to become private secretary to Lord Halifax, then at the head of the board of trade; and after having spent a long time in official duties, he was appointed secretary to the board, and held that place till the abolition of the board in 1782, when he retired on a pension. In 1780 he was sent on a confidential mission to the court of Madrid, where he spent about a year; but the negotiations having failed, and Cumberland's expenditure having much exceeded the scanty advance made to him by the ministry on his departure, he was left, apparently with much injustice, to bear a loss of four or five thousand pounds, which exhausted almost wholly his slender patrimony.—During his official life he had written many occasional and other pieces, and had given to the stage more than one successful comedy. Soon after his return from Spain he settled at Tunbridge Wells, where he resided for many years afterwards, occupied wholly with literary pursuits, and writing with indefatigable industry. He died in 1811. He was an honourable and amiable man: but his literary vanity was excessive; and his irritable susceptibility to criticism, which made Garrick call him 'the man without a skin,' exposed him to being unmercifully caricatured by Sheridan in the character of Sir Fretful Plagiary.—There is hardly any kind of composition, whether in prose or in verse, that Cumberland did not attempt. But most of his efforts were of little value; and in the best of them he was hardly more than fluent and agreeable. His epic poem of 'Calvary' was an utter failure. His series of periodical essays, called 'The Observer,' has much merit in an easy kind of criticism: the best papers are those on the Greek dramatists, the erudition of which he avowed having gleaned from Bentley's papers, but which he embellished by spirited metrical translations of his own. His dramatic pieces, embracing everything from tragedy to opera and farce, amounted to more than fifty, of which the larger number were printed. Among them were several comedies that are still remembered:—'The Brothers,' 'The West Indian,' 'The Jew,' and 'The Wheel of Fortune.'

 CUVIER, GEORGES LEOPOLD CHRETIEN FREDERIC DAGOBERT, one of the greatest naturalists the world has produced, was born at Montbéliard in 1769. He died in 1832. After finishing his education at Stuttgart, the young Cuvier accepted the situation of tutor in a protestant family in Normandy. Living for some years in that part of France, part of the time on the sea coast, he was enabled to follow up the love for natural history which he had exhibited from his earliest years. The Abbé Tessier, whom the troubles of the times had driven into exile from the capital, introduced him by letter to MM. Jussieu and Geoffroy. Several memoirs written about that time and transmitted to the latter, established his reputation, and procured his admission to two or three of the learned societies in Paris. In 1799 he was appointed successor to Daubenton as professor of natural history at the college of France, and in 1802 he succeeded Mertrud in the chair of comparative anatomy at the Garden of Plants. From that time he devoted himself steadily to the studies which have immortalized his name. His 'Leçons d'Anatomie Comparée,' and the 'Regne Animal,' in which the whole animal kingdom is arranged according to the organization of the beings of

which it consists, have raised him to the pinnacle of scientific fame, and established him as perhaps the first naturalist in the world after Linnaeus. His numerous memoirs and works upon these sub-

jects show a master mind in the study of zoology; and extending the principles laid down in his comparative anatomy to the study of paleontology, he has been enabled to render immense service to geology. Starting from the law that there is a correlation of forms in organized beings—that all the parts of each individual have mutual relations with each other, tending to produce one end, that of the existence of the being—that each living being has in its nature its own proper functions, and ought therefore to have forms appropriated for that function; and that consequently the analogous parts of all animals have received modifications of form which enable them to be recognized, he was able to ascertain from the inspection of a single fossil bone, not only the family to which it ought to belong, but the genus to which it must be referred. Even the very species of animal was thus to be made out, and the restoration of its external form as it might have lived and died, became in his hands an object of certainty and precision. His 'Regne Animal' has been frequently translated, and forms the basis of all arrangements followed at the present time. Cuvier filled many offices of great importance in the state, particularly connected with educational institutions. Napoleon treated him with much consideration, Louis XVIII. and Charles X. advanced him to honour, and Louis Philippe raised him to the rank of a peer of the realm. [W.B.]

CYRIL-LUCAR, patr. of Constnple., 1572-1638.

CYRUS I., or the ELDER, the founder of the Persian empire, was the grandson of Astyages, the last king of Media. Even in the time of Herodotus the story of Cyrus was so much mixed up with fable that it was impossible to separate truth from fiction. Astyages had a daughter named Mandane; and, in consequence of a dream which portended that her offspring should be the master of Asia, he married her to Cambyzes, a Persian of good family, but of a quiet and unambitious temper. On the birth of Cyrus, Astyages ordered the infant to be exposed, and intrusted the execution of his cruel order to Harpagus, one of his most faithful attendants. But the herdsman in whose hands the infant was placed for destruction was induced by the entreaties of his wife to rear it as his own son, under the name of Agradates. As is usual in such fabulous narratives, the royal youth gave evidence of his descent by superior talents and noble bearing; and being brought before his grandfather at the age of ten to answer for his severe treatment of the son of a noble Median at play, was discovered by the king to be the son of his daughter. The circumstances of his preservation were then stated, and the boy was sent to his real parents. Astyages forgave the herdsman, but wreaked his vengeance on Harpagus, by murdering his son, and causing his mangled limbs to be served up to his father at a banquet. Harpagus submitted quietly to his fate; but thenceforward meditating revenge, he succeeded not long after in organizing a conspiracy against Astyages, and easily prevailed upon Cyrus

[Tomb of Cyrus.]

to become the leader. Cyrus induced the Persians to join in the revolt; and, after defeating Astyages, took possession of his throne B.C. 559. Croesus, the rich king of Lydia, and brother-in-law of Astyages, was the first to endeavour to check the usurper, but Cyrus anticipated his design, and took possession of his capital in B.C. 546. The extensive dominions of Croesus, along with the whole of Upper Asia, soon came under

his sway. The most noted event connected with the acquisition of this vast country was the taking of Babylon, the capital of Assyria, of which Labynetus, the Belshazzar of Daniel, was king. Cyrus entered the city by diverting the course of the Euphrates, and introducing his army along the dry bed of the river B.C. 538. Cyrus next directed his efforts against the Massagetae, a nation of Northern Asia, and offered to marry Tomyris, their queen, who was then a widow. His suit was rejected; and in a battle which ensued he was defeated and slain in B.C. 529, after a reign of twenty-nine years. Such is the narrative of Herodotus. The *Cyropædia* of Xenophon is an historical romance. The life of Cyrus is of great importance, as being the epoch which forms the chronological link between sacred and profane history. [G.F.]

CYRUS II., or the YOUNGER, was the second son of Darius Nothus, king of Persia, and was appointed by his father satrap of Lydia, Phrygia, and Cappadocia, in Asia Minor, in B.C. 407. On the death of his father, B.C. 404, and the accession of his elder brother Artaxerxes, Cyrus disputed the right of succession, founding his claim on the fact that he was the first-born after his father ascended the throne. For this act of treason he was condemned to death; but his life was preserved through the intercession of his mother, Parysatis, whose favourite son he was, and who had secretly encouraged him in his attempt on the sovereignty. On returning to his province he continued to cherish his ambitious views, and immediately began to make preparations for the execution of his design. By various means he

succeeded in quieting the suspicions of his brother, while he endeavoured to bribe the Persians who passed between himself and the court, and raised a body of 13,000 Greeks, on whose assistance he chiefly rested his hopes of success. In the spring of B.C. 401, Cyrus set out from Sardis, and, marching through Asia Minor and Syria, reached the plain of Cunaxa, 500 stadia from Babylon. Here he found Artaxerxes ready to oppose him with an immense army. In the battle which took place, the Greek troops routed the Asiatics who were opposed to them; and Cyrus, rushing into the centre to attack his brother, was slain. The king caused his head and hands to be cut off, and wished it to be believed that he had fallen by his hand. The retreat of the Greeks, as described by Xenophon, who was himself present, forms one of the most interesting chapters in the history of ancient warfare. [G.F.]

DAILLE, JEAN, minister of the French Reformed church at Charenton, A.D. 1639, and one of the most eloquent preachers of his age. His published works amply justify the high celebrity he enjoyed. He combined the acute argumentative powers of a logician with the exercise of a lively imagination, that enabled him to draw illustrations of his subject from every field of nature; and to these intellectual qualities he added a fervour and pathos that stirred the depths of the human soul. His discourses are characterized by a heart-stirring eloquence, and it has been remarked of him, that he had all the eloquence of Saurin, without any approach to his turgid and bombastic style. The work by which the name of Daille has long been honourably known in this country is his treatise 'De usu Patrum,' a work designed to check or moderate the excessive reverence which is felt in many quarters for the writers of ecclesiastical antiquity. It rendered an important service to the protestant cause in his own country and times, and may still be consulted with advantage in exposing the semi-Popery of our own day. It was published in French in 1632, in Latin in 1656, and a translation of it into English in 1651, under the title of 'A Treatise concerning the Right Use of the Fathers in the Decision of

Controversies that are at this Day in Religion.' Dailhè was also the author of several expository works on books of Scripture—the most esteemed, if not the most valuable, of which have appeared in an English dress. His 'Discourses on the Epistle to the Colossians' were translated in 1672, with a preface by Dr. Owen, and of those on the Philippians an elegant English version was given to the world in 1841, by the Rev. James Sherman, minister of Surrey chapel, London. [R.J.]

D'ALEMBERT, JEAN LE ROND, one of the most celebrated mathematicians and astronomers of the last century, was born at Paris on the 17th November, 1717. Having been exposed by his mother near the church of St. Jean Le Rond, from which he derived his name, he was taken care of by a glazier's wife, and afterwards provided for by his father, when he had learned the fate of his child. He was educated at the Jansenist college of the Four Nations, and so premature was his intellect, that at the age of ten he had acquired all the knowledge that his masters could convey to him. He was regarded by the Jansenists as a second Pascal, and in order to make the comparison perfect, he was initiated into the mathematical sciences. With a passionate devotion to science, he left the college and took up his residence in the house of his nurse, where he remained for forty years, concealing from her his fame, and generously adding to the little comforts of her lot.—Having, like all other men of original genius, found himself anticipated in his earliest discoveries, he despaired of doing anything that had not been previously done, and abandoning his mathematical studies in despair, he resolved upon following one of the learned professions.—The income of 1,200 livres a-year which his father, M. Destouches, had left him, being insufficient to maintain him in the position which he now occupied, he pursued in succession the studies of law and medicine, and so ardently did he devote himself to the latter, that he banished his mathematical library to the house of a friend. It was in vain, however, that he tried to overcome the earliest and strongest of his passions. His mathematical works gradually found their way back to his house, the profession of medicine was abandoned, and his affections irrevocably fixed on the study of geometry.—At the early age of twenty-four D'Alembert was admitted a member of the Academy of Sciences, and in 1741 he published his 'Treatise on Dynamics,'

founded on a new principle of mechanics, which he applied to the resolution of several beautiful problems. In his 'Reflections on the General Course of Winds,' which was crowned by the Academy of Berlin in 1746, he gave the first details of the calculus of partial differences, of which he was the discoverer. In 1752 he published his 'New Theory of the Action of Fluids,' and also his 'Elements of the Theory and Practice of Music.'—About this time he undertook, in conjunction with Diderot, the 'Encyclopædie,' to which he communicated many articles of great interest, and also the preliminary 'Discourse' which was prefixed to that immortal work. These writings were followed by several literary works which we have not room to enumerate, and by his 'Researches on Different Important Points of the System of the World,' which appeared in 1754 and 1756, and in which he greatly improved the solution of the problem of three bodies, which had occupied the attention both of Euler and Clairaut.—In 1756 D'Alembert, who had previously received a pension from the king, was made a supernumerary pensioner by the Academy of Science; and in 1759 he published his 'Elements of Philosophy,' a work of distinguished merit.—After the peace of 1763 D'Alembert was invited by Frederick the Great to fill the office of president of the Academy of Berlin, and the empress of Russia had also solicited him to superintend the education of her family. Having refused, however, both these appointments, he was in 1772 nominated perpetual secretary to the French Academy, a position in which he wrote no fewer than seventy eulogies of its deceased members. Besides the works which we have mentioned, D'Alembert published a treatise 'On the Destruction of the Jesuits,' and a collection of his memoirs under the title of 'Opusculs Mathematiques.' In the latter part of his life he was attacked with a disease in the bladder, and he died of the stone on the 29th October, 1783, in the sixty-sixth year of his age. For a full account of his life, and of the romantic incidents of his attachment to Mademoiselle L'Espinasse, we must refer our readers to the 'Edinburgh Encyclopædia,' vol. i., p. 400, art. *Alembert*. DALTON, JOHN, D.C.L., born 1767, at Eaglesfield, Cumberland; died 1844, at Manchester. Dr. Dalton laboured under great disadvantages in reference to his early education, as he had only the benefit of the instructions of the village school till his eleventh year, and with the modicum of knowledge there acquired he himself taught the school in his twelfth and thirteenth years. He was afterwards engaged in husbandry, and in his fifteenth year became assistant in a school at Kendal, to the rectorship of which he succeeded about his nineteenth year. After remaining there for eight years, he went, in 1793, to Manchester, where he ever afterwards resided, and taught mathematics. The unobtrusive manner of life of a scientific member of the Society of Friends can present few incidents of interest, and except the views with which he enriched science, we shall find the life of Dr. Dalton barren—but these are of first-rate value. His first investigations were in 1801, when he sought to determine the amount of increase in the bulk of gases by the application of heat—a subject of great importance, and which led him to the conclusion that their expansion is the same for equal degrees of heat. His theory of mixed gases was his next publication, and soon afterwards followed his meteorological views, all of which have thrown much light on the subjects of which he treated. But his most valuable contribution to chemistry was the discovery of the atomic theory, communicated to Dr. Thomas Thomson in 1804. It is true that indications of this theory are contained in Higgins's and Richter's works, published several years anteriorly, but it is certain that Dalton was ignorant of these chemists' views, and that no one had been able to appreciate the importance of the subject from their publications until after Dalton wrote; and the writer has in his possession a statement from a distinguished foreign chemist, who within the last thirty years had read Richter's work most carefully, but had failed to discover in it the atomic theory. See *Atomic Theory* in 'Thomson's Cyclopedia of Chemistry.' [R.D.T.]

DAMPIER, WILLIAM, the son of a farmer near Yeovil, was born in 1652. He went early to sea, and performed many voyages. He then became under-manager of a Jamaica plantation; made an engagement in the coasting trade, and on its expiry joined a party of the freebooting logwood-cutters at Campeachy; and next, the privateers upon the coast, in an eleven months' cruise. Returning to the wood-cutting, he was very successful; and the year following visited England. Here he married and remained six months, when he returned to Jamaica, and took out goods for which he knew there was a market. At this time he purchased a property in Dorsetshire; but wishing to realize a little more money before settling upon it, and meeting a number of the leading buccaneers, who were Englishmen, near Port Royal, he joined their company. Having sacked Portobello, and crossed the isthmus, they waged a merciless war for four years in the Pacific; when disagreeing, a portion of them crossed to the Atlantic again, and finally sailed from Virginia on a buccaneering voyage round the globe, going west, and returning through the Indian seas. At the Nicobar isles Dampier left the ship and came on alone, reaching home in 1691. Soon after, he published his 'New Voyage round the World,' which excited great interest, being well written, and full of new and interesting matter relating to botany and zoology, as well as to geography and ethnology. Thus brought into notice, he was employed (14th January, 1699) by government on a voyage of discovery to New Holland and New Guinea, in which he made many important additions to geographical knowledge. At Ascension, on the homeward voyage, the ship 'foundered through perfect age,' as he expressed it; but though the crew and part of his collections were saved, and he was no way to blame, he was not again employed by government; in 1703 a company of merchants, however, gave him command of one of two ships sent out to the South Seas on a privateering cruise. This proved singularly unfortunate—he took no rich prizes—his commission was stolen by a petty officer, and he was imprisoned in India by the Dutch. We find him again in England in 1708, and employed in the privateer voyage of Woodes Rogers, fitted out by merchants of Bristol; but on this, his third circumnavigation, in the humble capacity of pilot. The expedition was very successful, and returned to the Thames 14th December, 1711—from which time nothing whatever is known of Dampier. His merits as a navigator, an accurate surveyor, and a naturalist, are of the very highest order; and his moral character seems to have been but little contaminated by the lawless company with which he so long associated. DAMPMARTIN, ANNE HENRI, Viscount, cap-

tain of dragoons at the outbreak of the French revolution, but chiefly memorable for his literary works, was born at Uzès 1750, and died 1823. His early education was intended to qualify him for the church; but he disappointed the expectation of his friends, and, choosing the profession of arms, devoted his leisure to literary studies. He was a friend of constitutional reform, and the subjects of his pen demonstrate the interest that he felt in education and national progress. The principal event in his military career was the assistance he rendered at Avignon, Nov. 1791, in suppressing the brigands and murderers commanded by Jourdan Coupe-tête. In 1792 he abandoned his regiment and retired to Holland. His work, entitled '*Evénements qui se sont passés sous mes yeux pendant la Révolution Française*,' is valuable for its authenticity, minuteness of detail, and simple sincerity. It appeared at Berlin 1799, and now forms the first part of a work in 2 vols., entitled '*Mémoires sur les divers évènements de la révolution et de l'émigration*,' published at Paris 1825. [E.R.]

His work on meteorology was a standard work during his time; being characterized rather, however, as embodying a clear statement of the views of the author, than as affording a practical work for reference. His constant battery was a valuable invention, which contributed much to the convenience of electrical experimenters, and to the development of the science, especially in the department of electro-type, which may be said to have originated from this invention. Mr. Daniell was a man of amiable disposition, and was universally respected for his social as well as scientific qualifications. [R.D.T.]

DANTE, or DURANTE, ALIGHIERI, born at

Florence in 1265, holds, in Italian literature, a

place corresponding to that which belongs to

Chaucer in our own. But his fame is wider, his

genius more vigorous and tragic; and his name

has been honoured by his countrymen in all sub-

sequent generations, while the father of English

poetry was for ages neglected and forgotten.

Dante lived in a time when the language of Italy

was beginning to be used in prose literature, and

had been considerably developed in metrical

composition; when the classical models as yet

exercised but little influence, the purer Roman

poetry being studied very seldom, and Greek

literature quite unknown; and when the trou-

badours of Provence were still the only poets that

had become famous in Christian Europe. His life

was spent in the midst of those storms which

raged throughout the middle ages, and of which

the Italian republics were noted scenes. He

was born of a distinguished family, belonging to

the party of the Guefts, which stood opposed to

the Ghibellines or Imperialists, and was oftenest

ranged on the side of the Popes. A youthful at-

tachment to Beatrice Portinari, who died when

the poet was in his twenty-fifth year, was ever

afterwards hallowed in his imagination, and was

not destroyed either by an unhappy marriage, or by

the activity with which the Florentine citizen

threw himself into the turmoil of political dissen-

sion. He served the republic as a soldier, and at

the age of thirty-five was one of the priors or chief

magistrates of Florence. A quarrel between two

factions into which the Guefts were split, caused

him, in 1302, to be banished; and, during the re-

maining twenty years of his life, he wandered

through Italy, seeking refuge in those Ghibelline

states whose principles he had long combated. His

party in vain attempted, more than once, to recon-

quer Florence; petitions for a reversal of the sen-

tence of banishment were equally unsuccessful;

the poet's stern and haughty disposition made him

unhappy, and probably unacceptable, at the courts

of the Italian princes; and, dejected and hopeless,

he died at Ravenna in 1321.—He wrote both in prose and in verse, and used both the Latin and the living tongues. In the former, he left a Ghibelline treatise 'De Monarchia,' and an essay 'De Vulgari Eloquentia,' in which he describes the rise of the Italian language and some of the works that had been written in it. His own great poem, also, was begun to be written in Latin hexameters. Among his Italian writings are noble Sonnets and Canzoni, and a work called 'Vita Nuova,' in which he connects, by a prose narrative, verses in honour of the dead Beatrice.—He is immortal in virtue of the celebrated poem, which, although narrative in form, was called, in conformity to a common mediæval usage, the 'Divina Commedia.' The action is described as taking place in the year 1300; so that the whole may be understood to have been produced during his weary years of exile. It has three parts, and a hundred cantos, and describes a Vision of Hell, Purgatory, and Paradise. Dante is conducted through the worlds of the dead by the poet Virgil. The first of the parts, containing the 'Inferno,' is by far the most interesting and vigorous. It is here that we encounter those terrible pictures, which make Dante one of the most sublime among poets; pictures conceived with an irregular force of imagination, which is at once singularly original, and strongly characteristic of the spirit of thinking and action in the times in which he lived; pictures, also, which are conveyed with a pregnant brevity and impressiveness of diction, easily perceptible even to foreigners, and producing an extraordinary effect on the poet's countrymen. The imagery of Dante has peculiarities which defy analysis. It unites, beyond any other, seeming clearness and sensuousness, with great power of calling up shadowy suggestions. The tone of sentiment is oftenest gloomy, despondent, or savagely sarcastic: and the celebrated personages of Italian history are portrayed at once with striking verisimilitude, and with malicious ingenuity of invention. Yet there are many brief intervals, and some long stretches, of deep and tender pathos. The harrowing scene in which the condemned spirit of Count Ugolino describes the sufferings of the Tower of Famine, is not more characteristic than the melancholy sweetness that breathes through the story of Francesca of Rimini. From the strange horrors of the 'Inferno,' the poet and his guide pass to the milder objects of the 'Purgatorio,' which are described with much poetic richness, and with a few personal and historical episodes, reminding us of the awfulness with which the first part had made us familiar. At the close of the second part the spirit of Beatrice, descending from a cloud of flowers which angels strew around her, appears to conduct her lover to the bowers described in the 'Paradiso.' In this, the third part, Dante and his sainted conductress pass from planet to planet, beholding the seats of the blessed, and discussing deep questions of theology. [W.S.]

DANTON, GEORGES JACQUES. This man, who united in his own person the contradictory characters of a demagogue and a statesman, and

who controlled the movement of the French revolution in its most stormy periods till the time of Robespierre's ascendancy, was born at Arcis-sur-Aube, October 28, 1759. His parents were farmers, of an ancient and respectable family, such as usually prepare their children for the liberal professions by a good education; and though he lost his father when young, he found a careful guardian in his step-father, M. Ricordin, who was the owner of a cotton mill on the banks of the Aube. He was at Paris practising, or looking for practice, as an advocate, when the revolution broke out; and, commencing his political career out of doors, he soon acquired that prodigious ascendancy over the population of the Faubourgs for which his commanding figure, his voice of thunder, his passionate temperament, his frankness, his good nature, and his genius, so admirably qualified him. In 1789, after the States-general had been convoked, when blood had already been shed in the streets of Paris, and the city was divided into electoral districts, the young advocate, already noted for his audacious oratory, obtained the presidency of the Cordeliers, which soon afterwards gave its name to the club founded by Danton to unite those who held the same opinions, rather than persons living in the same locality. These clubbists were the avowed enemies of royalty, of aristocratic institutions, and of the clergy, and for five years afterwards acted as the advanced guard in the revolutionary combats, ever giving birth to fresh swarms of Marats and Héberts, until Danton himself grew heart-sick of turbulence, and was willing, as he said, to be guillotined rather than to guillotine any longer.—Danton and his party were the first to perceive the utter impossibility of forming an alliance between monarchy and the new institutions, and at the same time to accept the terrible consequences of their foresight, and march in the straight course of the revolution. His voice sent the people to combat at the Bastille, and directed the attack on Versailles, preceded by the insurrection of women when the king and the royal family were forced to Paris; and he was among the last to yield the 'altar of the country' to the Constituent Assembly when the famous petition was signed in the Champ de Mars, praying for the deposition of the king after his arrest at Varennes. This was the middle of 1791, soon after which the constitution was solemnly accepted (30th September), and the Legislative Assembly, or first Parliament, convened, under the Roland administration. Towards the end of the year the country was threatened with the invasion of the emigrant nobles; and the king's veto, which brought the Assembly to a stand-still, commenced the last struggle between the people and the crown. At this crisis, it is said, Danton accepted presents from the court, but the writers of the *Biographie des Contemporains* deny the fact, while admitting his want of integrity in after years when he could supply his necessities from funds placed at his disposal without bartering away his country. In June, 1792, the Roland ministry was dismissed by the king, and the Marseilles' band invited to Paris by the patriots. Danton, who had gone to his native fields to snatch a short period of repose, now suddenly returned, reviewed the organization of the people,

lodged the Marseillaise, and prepared the struggle of the 10th of August—the day which saw the throne overturned, the patriots recalled to the administration, and Danton associated with them as minister of justice. The duke of Brunswick was known to be marching upon Paris, and the civil war had commenced in La Vendée. The Ministry and the Legislative Assembly were terror-stricken, and proposed to retire beyond the Loire, but Danton arrested them with that thrilling appeal, heard above the sound of the générale, and

pense; in addition to which he had refused to account for the money disbursed by him as minister, except in the gross. He returned from his first mission in time to vote for the king's death, laughing to scorn the delicacy of the Convention, which hesitated about deciding the question by a simple majority, though it had decided the fate of an entire nation without scruple. On returning from his second mission at the beginning of March, 1793, he found that his wife had expired two days before, and was even buried, and giving way to a passion as rare as it is affecting, he had the corpse disinterred in the night, and snatched a last embrace from the cold body, which, it is said, he held for a long time locked in his arms. The time was now drawing near when the death of Marat, and the condemnation of many of his scoundrel imitators on the one hand, and the fall of the Girondins on the other, seemed to prepare the field for the last combatants; and Danton and Robespierre were every day thrown into stronger relief against each other, until the former stood forth as the acknowledged head of a party of clemency, and the latter continued the remorseless career in which they had embarked together. Danton prepared his measures by procuring a decree which erected the Committee of Public Safety into a provisional government, and at the same time refused to take any part in it, alleging for reasons, his need of repose and his recent marriage, but really, it is presumable, that he might separate himself from the odium and responsibility of the rigour still necessary in the opinion of Robespierre. It was so the latter understood it. The hatred which divided these men was displayed on the part of Robespierre with a cool, logical propriety, which only provoked the more Danton's impassioned and defiant utterance of what he felt towards him. He was, like Mars, entangled in the meshes of an almost invisible web while in the embrace of the queen of love, and, giant as he was, fell an easy prey into the hands of his rival. He was informed of a secret nocturnal meeting convened by Robespierre to deliberate upon his death, but he refused to fly. 'They will deliberate,' he said, 'a long time before striking a man like me; and it is I who will surprise them.' The manner of his arrest, the crowd of charges heaped upon him, and the scene at the revolutionary tribunal, all betray the dread of his accusers lest his voice should once more reach the ear of the multitude. His address at the bar was a lengthened defiance of his enemies, and when recognized in prison he endeavoured to conceal his bitterness by a burst of laughter. Danton was undeniably a man of pleasure, for his whole life was a changing scene of passion; but we have the most affecting proofs that the spring of the domestic virtues welled up fresh in his heart, even to the last hour of his stormy career. To follow him from the thunders of the tribune, and the flash of the cruel weapons which he wielded in the political strife, to his wife and children, is like looking upon the face of a smiling landscape after the storm-cloud has passed over it. He was a true Frenchman, capable of pouring out his whole soul, and with the same deadly effect, as a lightning flash; capable, too, of melting into tenderness the next

the report of the alarm-gun, which has often since been quoted:—'Legislators!' he exclaimed, 'It is not the alarm-cannon that you hear, but the *pas-de-charge* upon our enemies. To conquer them, to hurl them back, what do we require? De l'audace, encore de l'audace, et toujours de l'audace! (To dare, and again to dare, and without end to dare!)' From this time his supremacy in the commune of Paris was complete, but he purchased it at the price of the September massacres, in which he refused to interfere, and for which, in the heat and terror of those perilous days, he iniquitously thanked the assassins, 'not as minister of justice,' for so he expressed himself, 'but as minister of the revolution!' The atrocious casuistry of such a speech is too horrible to contemplate. It must be remembered, however, that Marat, and a crowd of bloodhounds who followed him, were proposing the most frightful resolutions to be accomplished under a dictatorial power, and that the preternatural excitement and suspicion of the people had risen almost to insanity, and that Danton himself on many occasions afterwards both regretted his fearful stoicism, and justified it by his position. Space will not permit us to follow his career from this period to the events which hastened the fall of the Girondins, and were so soon followed by his own rupture with Robespierre; but we may notice briefly that he was anxious to save the followers of Brissot, who repulsed his overtures with scorn, and finally, in the person of Gaudet, declared that they preferred war to any peace that he could make with them. While the struggle with the deputies of the Gironde was pending, Danton was sent on two missions to Belgium, and it is understood to be proved that he supported his extravagances, though he did not grow rich, at the public ex-

instant, and of spreading the kindly virtues around him as soft, as lucent, and as penetrating as the light of morning. He has been called the colossus of the revolution, 'head of gold, bosom of flesh, loins of brass, feet of clay,' and with much truth. Nature seemed to pervade him in all her forms, from the woman's heart sleeping in his bosom, to the electric fire of genius which played like a glory around his head, and downwards, to the corruption which made a ruin of all the virtues belonging to him. The closing scene of his life presents us with an epitome of the whole man. He was the last of his party to ascend the scaffold, and stood there for a moment glancing with a defiant and pitying air around him, more like a monument of himself in the tribune, than a victim of the executioner. The next moment the vision of his family and his pleasant fields at Arcis-sur-Aube completely subdued him—'Oh my wife, my best beloved!' he murmured,—'Oh my children, I shall never see you more!' Then suddenly recollecting himself, he proudly exclaimed, 'Come, Danton, no weakness!' and turning to the headsman uttered his last words, 'Thou wilt show my head to the people, it is worth showing.' The next moment his head fell, and the executioner, catching it from the basket, carried it round the scaffold: it was the 5th of April, 1794. Danton, therefore, was in his thirty-fifth year when he passed 'like a gigantic mass of valour, ostentation, fury, affection, and wild revolutionary force and manhood, to his unknown home.' In him the revolution lost the only man, perhaps, who had really mastered its principle, and taken the stain of its horrors, without sacrificing his humanity; who had bowed to its Moloch throne with the enraged multitude of which he was chief, and having once swept by, to adopt a striking figure of the old Hebrew prophet, 'with confused noise and garments rolled in blood,' preferred to return as *the victim*, rather than the slave and worshipper of that altar. [E.R.]

D'ANTONELLE, PIERRE ANTOINE, Marquis, one of the most sincere actors in the French revolution, was born at Arles of an ancient and rich family 1747, and having joined the army when young quitted its ranks in 1782, and devoted himself to the study of moral and political philosophy. The year 1789 found him a worshipper of the rising sun of French liberty, and the year following he was named mayor of Arles. Being selected to aid in the pacification of Avignon and Marseilles, he acquired fresh popularity by the satisfactory manner in which he fulfilled his commission, and was deputed to the Legislative Assembly by the department of the Bouches-du-Rhone. On the establishment of the republic he was sent with two colleagues to announce the change to the army of Lafayette, who gave orders for their arrest, and it was not until the general abandoned his command that they regained their liberty. He was a member of the revolutionary tribunal when the queen was condemned, and also when the twenty-two Girondins were brought up for judgment; but he pronounced against his colleagues on the latter occasion, and was confined in the Luxembourg till the fall of Robespierre. He appears to have acted on all occasions as a man of independent principle, and even refused the editorship of the *Moniteur* under the

Directory that he might speak his own language in the *Journal des Hommes Libres*. The Directory endeavoured to establish a charge against him on the occasion of Babeuf's conspiracy, but they failed to obtain a conviction. He was ordered to leave France by the first consul, and having returned when the empire was established was compelled to abandon Paris for refusing to address Napoleon as his sovereign. He ended his days at Arles in 1819, and left behind him numerous political works, which testify to his steady love of liberty through the whole period of the revolution. [E.R.]

DARWIN, ERASMUS, an English physician, known to fame as a poet and botanist, was born at

Elton, near Newark, in 1731, and after taking his degree at Edinburgh, pursued his professional career at Lichfield, from whence, in 1781, he removed to Derby, having contracted a second marriage, and died in the latter place 1802. Dr. Darwin was an original thinker, a great adept in analogies, and a respectable versifier. The best known of his works is his 'Botanic Garden,' the first part of which is entitled 'The Economy of Vegetation,' and the second 'The Loves of the Plants.' His other works are 'Zoonomia, or the laws of Organic Life,' and 'Physiologia, or the Philosophy of Agriculture and Gardening,' besides which he published a tract on female education, and several papers in the 'Philosophical Transactions.' The personal character of Darwin was amiable, and his conversation generally pleasing. His appearance was athletic, he was much pitted with the small-pox, and had an impediment in his speech. His son, CHARLES DARWIN, after taking a prize medal at Edinburgh, and writing a pathological treatise, died at the early age of twenty, 1778. [E.R.]

DAUBASSE, AMAND, a Gasc. poet, 1660-1720.

DAUBENTON, LOUIS-JEAN-MARIE, a celebrated anatomist and naturalist, was born at Montbard, in Burgundy, 1716. He died in 1799. After taking his degree in medicine, he retired to his native town to practise his profession. At that time Buffon, who had been a schoolfellow of Daubenton's, had conceived the plan of his celebrated work, the 'Histoire Naturelle.' He felt, however, that it was necessary to associate with himself some one who was capable of taking the labour of many of the details off his hand, and such a man he found in Daubenton. In 1742 he induced him to come to Paris, and obtained for him the appointment of curator and demonstrator of the cabinet of natural history at the Garden of Plants. Daubenton commenced his labours with zeal and enthusiasm, and soon succeeded in making the collection at the museum the first in Europe. While engaged in this task, he was at the same time collecting materials for assisting Buffon in that part of his 'Histoire Naturelle,' the history of quadrupeds. To Daubenton is due the merit of supplying all the anatomical details and descriptions, both external and internal, which rendered that part of Buffon's work so much esteemed amongst the naturalists of other coun-

tries. Daubenton wrote many papers and memoirs on zoological subjects. He has described several animals new to science; and was the first to apply the study of comparative anatomy to the determination of extinct animals from an examination of their fossil remains. In vegetable physiology he has made some valuable additions to our knowledge; and in his enlightened endeavours to improve the breed of sheep, and to bring nearer perfection the texture of their wool, he has merited the gratitude of his country. He was interred in the Garden of Plants. [W.B.]

DAVID, JACQUES LOUIS, the most distinguished painter of France of modern times, wa

born at Paris, in 1748, and died an exile at Brussels, December 29, 1825. David was the pupil of Vien the regenerator of painting in France, who revived the study at once, both of nature and the antique, in the place of the affected mannerism of Vanloo and Boucher, the painters of Louis XV. He accompanied Vien, in 1775, as pensioner to Rome, when the latter was made director of the French Academy there. David was a diligent student of the antique, perhaps few artists so assiduously so. He returned to Paris in 1780, and in 1783 he was elected a member of the French Academy of Painting; his presentation picture was Andromache deploring the death of Hector. David now revisited Rome, and painted his celebrated picture there, 'The Oath of the Horatii.' He then returned to France, and executed some great works for Louis XVI.; but this did not prevent his voting for the death of the king, as a member of the National Convention, in 1792. His strong republican spirit was further shown in the representation of two exciting political subjects at this time, 'The Death of Lepelletier, the Deputy,' and 'The Death of Marat;' but personal dangers, and other party difficulties, finally induced David to give up politics entirely for the arts, to which, during his short political influence, he had been of considerable service. He became in a few years the favourite painter of the emperor Napoleon, and his principal works have direct reference to Napoleon's eventful career; the picture of his coronation was especially agreeable to Napoleon. At the restoration of the Bourbons, however, in 1815, David was banished, and retired to Brussels, where he survived his exile ten years. David was an excellent draftsman, after the ideal taste of the Greeks, but his imitation amounted to the servile; and the majority of his naked figures are of such rigid uniformity of character that they appear to be painted rather from ancient marbles than from nature. He completed the revolution in taste commenced by Vien, and *antique-mannerism* was carried to excess by Guerin, and some other of his principal scholars.—(Gabet, *Dictionnaire des Artistes, &c., au dixieme siecle.*—1.) DAVY, SIR HUMPHRY, Bart., born 1778, at Penzance; died 1829, at Geneva. This distinguished chemical philosopher was brought up at Penzance, principally under the care of his mother, a woman of talent and strong moral sense. He was apprenticed to a surgeon, and at the age of twenty he became assistant at the Clifton institution, which had been established by Dr. Beddoes to determine the influence of different gases in the treatment of diseases. It was here that he discovered the remarkable action of nitrous oxide, or laughing gas, on the system, and thus paved the way to the application of those means now in use for alleviating pain in severe operations.—In 1801 he was appointed assistant lecturer at the Royal Institution, where he speedily acquired great popularity and fame. In 1806 he made the important discovery that the combinations and decompositions by electricity are referable to the law of electrical attractions and repulsions, and thus demonstrated the intimate connection between electricity and chemistry. His most brilliant discovery was, however, that of, in 1807, the composition of the alkalies, which he proved to be combinations of oxygen with metals. In 1810 he found chlorine to be a simple body, in accordance with the view of Scheele announced in the previous century. His other discoveries were

that of the Safety Lamp, exhibiting a fine example of inductive reasoning; and his mode of preventing the corrosion of copper sheathing by the protecting influence of zinc. Sir Humphry Davy was distinguished by a poetical imagination, which would undoubtedly have made him a poet if his time had not been absorbed by science; and, as evidence of his descriptive powers, he has left behind him two works, 'Salmonia,' and 'The Last Days of a Philosopher,' which are not surpassed in their peculiar department by any compositions in the English language. DEFAUCONPRET, A. J. B. DE, a French translator, 1767-1843.

DE FOE, DANIEL, the son of a butcher in London, was born there in 1661. Four years in a dissenting academy seem to have furnished the only regular education he received. Engaging in trade, first as a wool merchant and afterwards as a brick and tile-maker, he became bankrupt after some years, but afterwards paid his creditors in full. His attention had been diverted from business both by literature and by politics. He enlisted under the duke of Monmouth, and narrowly escaped after the rebellion was crushed; and he published, a little earlier, a pamphlet on the war between the Turks and the Austrians. His literary career, however, did not fairly begin till he was thirty-nine years old, when he abandoned trade and became an author by profession. The first period of his authorship was devoted entirely to politics, in which he was one of the ablest and most popular among the advocates of Whiggism. He gained the notice of King William by his 'True-born Englishman,' published in 1700; but the influence of Toryism in the ministries of Queen Anne exposed the coarse and energetic adversary of the Stuarts and the Church of England to an almost uninterrupted series of discouragements and persecutions. In the midst of these, however, he wrote with unbroken courage and unwearied industry. Besides publishing innumerable pamphlets, he carried on a periodical paper called the *Review*, without assistance, during the greater part of the queen's reign. In 1703 an attack on the high church party, in his pamphlet ironically called 'the Shortest Way with the Dissenters,' was punished by the pillory, a heavy fine, and imprisonment for more than a year. In 1706, the ministry of Godolphin employed him as an agent for the union of Scotland with England; and in this character he resided a considerable time in Edinburgh, and found materials for a 'History of the Union.' Under the last administration of the reign he was again committed to prison for vehemently arguing in favour of the Hanoverian succession. After the accession of George I. he seems to have received no countenance from those whose interests he had so keenly espoused; and, abandoning politics altogether, he devoted himself to fictitious composition. This stage of his career, which gave birth to the only works by which he is now remembered, did not begin till he was between fifty and sixty years of age, had fallen into bad health, and had even had a stroke of apoplexy. These were the circumstances in which, in 1719, he published the first part of

Robinson Crusoe,' one of the best and most popular of all romances. Of a similar kind, though incomparably inferior, were several subsequent tales, such as 'Colonel Jack' and 'Captain Singleton,' in his 'History of the Plague' and 'Memoirs of a Cavalier,' he engrafted historical facts on invented incidents and characters, with a curious force and earnestness of impression. De Foe died in London in 1731. [W.S.]

DEMOCRITUS, the sage of Abdera: he lived about four hundred years before Christ, at the period of Socrates; 460 or 470 B.C. is reckoned the date of his birth, and he is said to have survived a full century. Nothing of the writings of Democritus remain save a few fragments; but with two exceptions, there is no great man of antiquity whose renown fills a larger space, or who seems, alike by his genius and his acquirements, to have better deserved a hold on the world's memories. Urged by thirst for knowledge, he travelled during his youth and manhood through India, Ethiopia, Chaldæa, and Persia; he spent several years in Egypt, and seems to have visited the schools of Pythagoras and Zeno. It is said, also, that he heard Socrates, and communed with Anaxagoras concerning the phenomena of Astronomy, and the physical structure of Nature. Cicero tells us that in style Democritus might be the rival of Plato—he wrote so clearly, and so adorned what he wrote. The titles of his works relate to Logic, Ethics, Physics, Mathematics, Astronomy, Medicine, Poetry, Music, Grammar, and even Strategy. The Abderites are recorded to have paid loftiest honours to their sage. They confided to him the care of the state; and there must have been ground for another pleasing tradition. It is said that Democritus had spent all his substance in travelling. But a law of Abdera refused the rights of burial to any one who wasted his patrimony. To escape the penalty, the philosopher read in public his chief treatise, entitled *μυκτὰς διαζωσμός*; and charmed by his eloquence the people voted him the sum of five hundred talents, or £125,000 sterling. It is not often that a philosophical treatise reaps such a reward!—The fame of Democritus in modern times, rests on his extraordinary provision of the *Atomic*, or modern physical theory of the Universe. Rising above the confined idea of the Ionian school, that all things are modifications of one element or principle, he broached the conception that bodies are made up of ultimate atoms, and that in the character of these atoms must be sought the explanation of the qualities of what we call *body*. He went off at once from all barren logomachies about the *plenum*; and, indeed, more than any other thinker of antiquity, achieved the privilege of laying down the ground of just speculation in physics. His doctrines prevailed widely, and were afterwards enshrined in noble verse by Lucretius. Democritus was certainly a materialist: the mind, he thought, like fire, consisted of the finer atoms. He had no notion of life apart from body: and the

DEM

gods he deemed delusion. He had grand views of the universe: in the milky way, first of all, he saw the light of innumerable worlds; but he had a correspondingly mean opinion of the nature and destiny of Man. Nay, he treated Man, his evanescent works, and feeble struggles, so lightly, that we find his effigies always with a jeer on the lip, and himself with the appellation of the laughing philosopher. Democritus is not the only thinker who, in the intensity of his contemplation of material nature, has overlooked a Force infinitely more enduring and grand. The loss of his writings is that, perhaps, among all calamities to ancient monuments, which we ought the most to deplore. [J.P.N.]

DEMOIVRE, an English mathematician, born in France 1667, died 1754. He contributed greatly to our knowledge of *Series*; he was the author of important theorems in trigonometry; but his principal labours concerned the doctrine of Chances. He had considerable analytic genius.

[Demosthenes—From an Ancient Bust]

DEMOSTHENES, the greatest of the Greek orators, was the son of an Athenian citizen of the same name who carried on the trades of a cutler and cabinetmaker, and was born about the year B.C. 382. Having lost his father at the age of seven, the care of his youth, as well as the management of his property, amounting to 15 talents, devolved upon three guardians appointed by his father. At the end of his minority of ten years he commenced a prosecution against his guardians to recover his property, which they had squandered, and after a litigation of two years obtained a verdict against one of them, who was condemned to pay a fine of 10 talents. The prosecution was conducted by himself; and the speeches which he delivered in support of his cause excited the admiration and applause of the judges. Encouraged by this successful beginning, he ventured to speak before the people, but his feeble and stammering voice, his interrupted respiration, his ungraceful gestures, and his ill-arranged periods, brought upon him general ridicule. His failure, however, only roused the energies of his unconquerable will; he resolved to correct the deficiencies of his youth, and overcame them with a zeal and perseverance which have passed into a proverb. After a course of the most rigorous discipline, he reappeared in

public (B.C. 355), and pronounced two orations against Leptines and Androtion, the former of which is considered as one of his happiest efforts. His fame as an orator 'whose resistless eloquence wielded at will that fierce democratic,' now secured for him the general esteem, and entitled him, as one of the leading statesmen of Athens, to take an active part in all public affairs. In B.C. 354 he opposed, though without success, the projected expedition to Euboea, and dissuaded his countrymen from undertaking a war against Persia. From this time the history of his life is closely mixed up with that of his country; every measure calculated to promote the public good received his powerful support, and every encroachment on public freedom found in him an uncompromising opponent. Philip, king of Macedonia, had begun in B.C. 358 his encroachments on the Athenian possessions in the northern part of the Aegean without meeting with any active opposition on the part of the parent country; and it was to rouse his countrymen against the crafty invader that Demosthenes pronounced his *Philippics*, a series of the most splendid and spirited orations. The first was delivered in B.C. 352. Another series equally celebrated (the *Olynthiacs*), were designed to prevail upon the Athenians to aid the inhabitants of Olynthus, a maritime town near the isthmus of Palline, which had been besieged by Philip, and which, notwithstanding the exertions of the orator, was taken in the spring of B.C. 347. In the following year Demosthenes, along with nine others, went on an embassy to Philip, and succeeded in concluding a peace which continued to B.C. 339. But he did not the less attentively watch the proceedings of Philip; and when hostilities again broke out, he took part in the disastrous battle of Chaeronea, the result of which left Philip master of the destinies of Greece. Though he fled along with many others, his grateful countrymen decreed to him a golden crown. On the accession of Alexander, B.C. 336, Demosthenes still cherished the same feelings towards the Macedonians; but the sudden appearance of the youthful conqueror overawed opposition. (See ALEXANDER.) But even his great services could not protect him against an outburst of popular feeling. Harpalus, one of Alexander's generals whom he had left at Babylon, absconded with the treasure intrusted to his care, and arriving in Athens, purchased the protection of the city by distributing his gold among the popular leaders. Demosthenes was one of the suspected recipients; and being declared guilty, and fined in 50 talents, he retired to Aegina and Troezen, where he remained till the death of Alexander, B.C. 323. Returning to Athens for a short time, he was forced again to withdraw in B.C. 322; and retiring to Calauria, a small island opposite to Troezen, took refuge in the temple of Neptune, where he suddenly died. The orations of Demosthenes, on which his character as a statesman chiefly rests, have been often published both in mass and in detached portions. 'His manner,' as Hume well observes, 'is rapid harmony exactly adjusted to the sense: it is vehement reasoning without any appearance of art: it is disdain, anger, boldness, freedom, involved in a continued stream of argument: and, of all human productions, the orations

of Demosthenes present to us the models which approach the nearest to perfection.' [G.F.]

DESCARTES, RENE, born in La Haye, Touraine, in 1596; died in Stockholm in 1650: in elevation and amplitude, his influence approaches that of Plato and Aristotle; he is the unquestioned compeer of Bacon and Newton. Des Cartes fell on one of those recurring periods when Philosophy is in decrepitude, representing neither knowledge, nor liberty, nor wisdom; and he regenerated it. We can speak but briefly either of what he did or what he was.—1. In an epoch of dogma and ignorance and intolerance, an original Thinker appears, as if inevitably, to strike always into the same course. Turning from the disorder of the received Physical Sciences, Lord Bacon prepared for his 'Instauratio,' by research concerning true **METHOD** in Physical Inquiry: Des Cartes, repelled by corresponding disgust, from the moral and psychological logomachies of his time, demanded—what is fitting **METHOD** in Speculative Philosophy; and what the basis and criterion of *certainity*? The reply was not a new one, but only a reproduction of the method of Socrates, of Plato, of Aristotle, and its adjustment to the condition and culture of his time. The primal and sufficient ground of certainty in Speculative Philosophy, is the content of our human Consciousness. *Cogito ergo sum* is not a syllogism, but a statement of the manner in which the fact of existence becomes revealed. The phenomena of mind are not proveable; they are **FIRST FACTS**. The right sifting and analysis of these primary mental phenomena, is the sole work of Reflection—the single legitimate aim of Philosophy. Inquiry evolves their true signification, determines their reach, disengages them from foreign elements, and ascertains their metaphysical import and value; and with *this*, inquiry ends; it cannot logically affect one of them with doubt. Two great achievements were solicited in modern times, from this reassertion of the power and functions of rational psychology. *First*, to put down all theoretic scepticisms after the fashion of Bayle's. Doubt may,

and ought to affect particular opinions or conclusions, but to erect Doubt into a principle, is, according to Des Cartes, a sheer paralogism. Doubt in this sense is virtually an act of *Belief*; it is a confidence in *one* state of mind, or *one* intellectual process; but why among all states of mind *select this one* for confidence? Pyrrhonism in every form—whether as scepticism or dogmatism—is irreconcilable with true method. *Secondly*, Cartesianism refused to estimate the value or reality of our primary intuitions by their accordance or non-accordance with any *system*. Every logical process rests on *some* of our intuitions; so that here too is a paralogism. One such paralogism was developed in the Physiological and French Sensational schools: a form of error recently revived by M. Comte. Another is the attempt of powerful Churches to repudiate Philosophy in name of Revelation. The Gallican Church in its Augustan era, did not commit this error; neither has it ever been the position of our English Hierarchy: no church so conducting itself can long endure. A Religion without a Philosophy, must ever evolve in the long run, dogma without creed, and a clergy without a people.—2. Something more definite regarding the method of Des Cartes may be gathered from his treatment of the argument regarding the Being of a God: his proof is not an *à priori* one; it rests on *facts*, as directly as the argument from external design—the fact, viz.: that our human consciousness reveals Ideas having the attributes of Universality and Necessity. Ideas of this kind, said Des Cartes, cannot be the product or reflection of man's finite and imperfect nature: therefore, a Being exists whose essential character enables him to communicate to us the Ideas of Infinity, Eternity, Self-existence, &c. The special proof given by ANSELM, also occurred to Des Cartes, and was expanded by him. The logic of these arguments—to which, indeed, all *à priori* proofs may be reduced—is open to only two exceptions. *First*, it may be denied that Ideas exist having the characters of Universality and Necessity; *Secondly*, it may be questioned whether it is legitimate to pass from a phenomenon in Psychology to a reality in Ontology;—it does not follow, says the philosopher of Königsberg from the existence of an Idea, that there is any externality corresponding to it. As to the former objection see articles CONDILLAC, GASSENDI, LOCKE, PLATO, &c.: the latter is noticed at length in articles KANT and REID.—3. The student must look for no completed Psychology, or even an approach to it, in the writings of Des Cartes. Owing to the absence of every attempt at system, the cursory reader is apt to miss those traces of earnest searching insight which are strewn broad-cast over his pages; and the rapid critic easily makes out a case against one of the hardest and most original thinkers in Europe:—the extravagant misapprehension contained in the first three chapters of Locke's Essay, may be taken as a type of such criticisms. One fatal error of the great Frenchman requires to be explained because of its influence on subsequent speculation. He overlooked the essential *activity* of the thinking principle, regarding it rather as the *subject* of certain peculiar changes; and this led him to a profounder misapprehension of the Idea of Sub-

stance. LEIBNITZ corrected him by restoring to it, the attribute of CAUSE or FORCE; but not before the error had led to the engulfing fatalism of SPINOZA.—4. The intellectual vigour of Des Cartes left its marks on many various departments of knowledge. He was fond of Physiology. His hypothesis of *Vortices* prepared for the mechanical theory of planetary Motions. He founded Dioptrics—first impressing on it a geometrical character. But that by which he will longest live in Mathematics, is his most fertile idea of representing the properties of curves by equations. Measured by its influence this discovery takes rank with the infinitesimal calculus; nor has its empire been disputed until in the most recent times by the remarkable scheme of Quaternions.—5. The life of Des Cartes was given mostly to solitude and thought: nevertheless, on occasions, and with characteristic ardour, he took part in active pursuits. A soldier, he spent several years in camps; he travelled much, and carried on an extensive correspondence.—Whenever Philosophy falls off, and the throne of Truth is usurped by Scepticism or Dogmatism, regeneration will invariably come in one way—through restoration of the method and fundamental principle of Des Cartes. DESMOULINS, BENEDICT CAMILLE, born at Guise in Picardy, 1762, and educated for the law at the college of Louis-le-Grand, was known as a wild young student of jurisprudence and *Belles Lettres* at the commencement of the French revolution, and is supposed to have been early acquainted with Robespierre, if, indeed, he was not his college friend. He made the first of those stirring harangues by which the people were excited to the revolutionary combat, from a table on which he mounted in the garden of the Palais Royal, when the Swiss and German troops had been ordered under arms, previous to the dismissal of Necker. It was a moment of intense excitement, for the police were eyeing the young orator, who with a loaded pistol in each hand, swore he would not be taken alive. This was on Sunday the 12th of July, 1789, and two days afterwards Camille fought with the future republicans at the storming of the Bastille. Before the end of the month the 'Rights of Man' had been promulgated by the Constituent Assembly, and was succeeded by that flood of journalism and club-eloquence on which so many obscure men were suddenly borne to the height of popularity. Camille made his first profession of the republican faith in a work which he entitled 'La France Libre,' in which he declared that a democracy was the only form of government suited to a people who were 'worthy of the name of men.' This was followed by his 'Discours de la Lanterne aux Parisiens,' subsequently called 'Les Révolutions de France et de Brabant,' a weekly paper, edited, as he styled himself, by the 'Attorney-General of the Lamp-Iron.' This atrocious style was chosen by Camille rather as his password to the Faubourgs than the echo of his own sentiments, and he abandoned it as a *jeu d'esprit*, too cruel to be taken in earnest. Towards the end of the year he united with Danton in the establishment of the Cordeliers' Club, the fiery element into which these two cast themselves to work out their own destiny, and to accomplish their part in the revolution. About this time he married the beautiful and accomplished Mademoiselle Duplessis, the devoted wife who afterwards hovered about his prison, and rested not till she arrived at the same cruel term of her existence as him she loved. It is related that the curé refused to marry him because he had written that there was as much evidence for the religion of Mahomet as for that of Christianity, and the dispute between them was referred to Mirabeau, who decided that a man's religion could only be judged by his exterior profession. Camille declared himself a good catholic, promised to amend his ways, and was thereupon married, the priest laughing at the idea of a Mirabeau acting as a father of the church. It is painful to read the words of the bridegroom when on his defence five years later:—'A marked fatality has

ordained,' he said, 'that of sixty persons who signed my marriage contract, there should remain to me only two living friends, Robespierre and Danton! All the others have fled or are guillotined!' After the 10th of August, 1792, when Danton acquired the supremacy as minister of justice, Camille Desmoulins acted as his secretary, and though it is a disputed point whether he took any active part in the execrable massacres of September, it cannot be supposed that the 'attorney-general of the Lamp-iron' was the man to shrink from his share of the responsibility. The incident which marked the return of the friends to moderate counsels soon after the fall of the Girondins is related by Lamartine. It was one of the last evenings in the month of January, when Danton, Souberbielle, one of the jury of the revolutionary tribunal, and Camille Desmoulins came away together from the Palais de Justice, and spoke sorrowfully of the bloodshed of that day, when fifteen victims had fallen on the scaffold, and twenty-seven more had been condemned to suffer. The friends separated at Danton's door, and next day Camille Desmoulins had written the first number of the 'Vieux Cordelier,' in which the system of proscription was denounced, and a 'Committee of Clemency' demanded as a preliminary to clearing the prisons of the 'Suspect.' In the daring burst of eloquence and passion which marked the pages of this journal, the system of Robespierre was attacked under cover of an assault on the cruel atheists Hébert and Chaumette. The quarrel broke out in the Convention as a personal squabble, on the 8th of January, 1794; and Danton supported his friend, thinking it high time, as he expressed himself, that they should make work for the *guillotine of public opinion* by enlightening the people. Two days afterwards the quarrel was resumed, and Robespierre spoke of Camille as a wayward child whose person it was not necessary to injure, but demanded that his writings might be burned. 'To burn them,' exclaimed Camille starting up, 'is not to answer them!' and then, reckless of consequences, he complained that he had first submitted his copy to Robespierre, but that he had since refused to read his journal because he would not compromise himself by espousing either side of the quarrel. Danton acted as peace-maker on this occasion: but the harvest of death was ripening for this new party of mercy as for the Girondins; and Danton himself, together with his friends Camille Desmoulins, Philippeaux, and Lacroix, were arrested on the night of the 30th March, as Héroult de Séchelles had been only a little earlier. His wife, Lucile, addressed an affecting appeal to Robespierre, which, it is believed, never reached him, and Camille found the means of opening a secret correspondence with her. These letters have been preserved, and they are filled with expressions of the most passionate attachment and despair. At the bar of Tinville the prisoners were asked their age, name, and residence, 'My age,' said Camille, 'is that of the sansculotte Jesu—I am thirty-three; an age fatal to revolutionists!' He had prepared a written defence, but was not allowed to read it, and in a fit of indignation tore the paper to fragments, which, however, were afterwards collected by a friend, and their contents

handed down to posterity. The commotion of the people was feared by Robespierre, and the wife of Camille was arrested the following night, that her beauty and the eloquence of her grief might not be the means of snatching away a victory which he had only obtained by surprise and subtlety. She was guillotined a few days after her husband. On his way to the scaffold, Camille Desmoulins forgot all his philosophy, and became almost frantic, struggling with his bonds and appealing to the people whom he had called to arms on the 14th of July—to whom, as he reminded them, he had given the national cockade. At the guillotine he recovered his *sang-froid*, and, looking on the axe, said to the populace, 'Behold, then, the recompense reserved for the first apostle of liberty!' The date of his execution is the 5th of April, 1794, that of his wife's the 10th. He was a man of rare genius, light, sparkling, and sarcastic, but of a most undecided temperament, and headlong in his impulses. His dazzling eloquence rained words like fire; his epigrams flew like polished arrows, and, careless of results, he launched them against men of all parties, from Lafayette 'the liberator of two worlds,' and 'constellation of the white horse,' to St. Just who 'carried his head with the air of a saint-sacrament.' His ridicule of the Girondists in a 'History of the *Brisotins*,' published 1793, contributed to bring contempt upon that body by its very title; yet it must be remembered, to the honour of Camille and the Dantonists, that their attempt to save their enemies from the guillotine was the first step to their own ruin. DIAZ, BARTHOLOMEW, a knight of the royal household, was sent by the king of Portugal in August 1486, in quest of the dominions of the imaginary Christian prince, Prester John, supposed to lie in India or Eastern Africa, while Covilhã and Payva went by land through Egypt. Diaz and two caravels of fifty tons each, and a small store-ship. Having touched at the African coast in lat. 26° S., 400 miles farther than any previous navigator had reached, he steered boldly south and lost sight of land. Storms which arose soon after bore him far E. of the Cape of Good Hope, which he was thus the first to double without knowing it. He had advanced to the mouth of the Great Fish River, making frequent inquiry after Prester John, when the crews insisted on his return. He now visited the Cape, determined its position with accuracy, and called it the Stormy Cape, a name which for better augury the king, John II., changed to the present designation. Diaz reached Lisbon in 1487. He perished at sea in 1500, in one of Cabral's ships commanded by him.—MICHAEL DIAZ OF ARRAGON, was one of the companions of Columbus. He became governor of Porto Rico, and died in 1512. [J.B.]

DIBDIN, CHARLES, was born at Southampton in the year 1745, and was educated at Winchester. His father, who was a silversmith, first meant that his son should enter the church, but his early and devoted attachment to music soon frustrated the paternal intentions. He received some lessons in music from Mr. Kent (whose anthems are well known), and commenced his career as poet and musician at sixteen years of age, and produced at Covent Gar-

den Theatre an opera named 'The Shepherd's Artifice.' About this time he made his *debut* as an actor, and was well received. In 1768 he was the original Mungo in his own 'Padlock.' In 1772 he produced the music to 'The Deserter;' in 1774 the words and music of 'The Waterman;' and in 1775 'The Quaker.' In 1778 he became composer to the Covent Garden Theatre, with a salary of £10 per annum. About the year 1782 he built the Circus Theatre, afterwards known as the Surrey, and continued to manage it with indifferent success for nearly four years. In 1778 he published his musical tour, and in 1789 he gave the first of his entertainments, under the title of 'The Whim of the Moment,' which soon became very popular. These entertainments, of which he was performer, poet, and musician, furnished his sole means of livelihood until the year 1805, when he retired from public life with a government pension of £200. In 1813 Dibdin was attacked with paralysis, and he died in July, 1814. Besides the operas named, Dibdin wrote two novels, and a few smaller literary works, and wrote and composed the enormous number of nine hundred songs! To him is due whatever merit there is of having originated that kind of musical entertainment which has been followed by so many vocalists, from Incledon to Wilson, Templeton, and John Parry. [J.M.]

DIDEROT, DENYS, was born in 1713, at Langres in Champagne, where his father was a respectable tradesman. Educated for the church, but declining to take orders, he was next placed in the chambers of a legal practitioner in Paris; but, in like manner, he abandoned the law. Literature now became his profession; and, after a few years of obscure drudgery, he became one of the most famous among those literary and scientific men, whose attacks on the established order of things, religious and ecclesiastical as well as political, are alleged to have acted so powerfully in precipitating the French revolution. It was Diderot that projected the huge work which, receiving the contributions of these so-called philosophers in their several departments, gave them their usual title of 'Encyclopedists.' The 'Encyclopédie, ou Dictionnaire Raisonné des Sciences, des Arts, et des Métiers,' was designed, not merely to supersede the imperfect dictionaries of universal knowledge that already existed, but to teach, on every occasion which could admit the teaching, those social doctrines which were held by the writers. Among

the contributors were Voltaire, Rousseau, and several very eminent men of science; the work was edited at first by Diderot and D'Alembert, and afterwards by the former alone; and, among its very unequal contents, his articles are distinguished both for good writing and for versatile ability. The publication continued, amidst many obstacles, from 1751 to 1769. In the course of it, and afterwards, Diderot wrote several didactic treatises, indecent and irreligious novels, and two sentimental comedies; and his published correspondence, especially with Voltaire and Grimm, throws much light on the gloomy picture which French society and morals then presented. He died at Paris in 1784. [W.S.]

DIOGENES, the *Babylonian*, a Stoic philosopher, teacher of dialectic in Rome, 200 B.C.

DIOGENES, the celebrated Greek cynic, was native of Sinope, in Pontus, where he was born 413 B.C. He was banished from his country for coining false money, and repaired to Athens where he studied philosophy under Antisthenes and surpassed his master in the rudeness of his manners, and his austere views of human nature. He walked about the streets with a tub on his head, in which it is said he lodged at night. He is the type of cynicism, and for his zeal as a moralist has been called the 'Mad Socrates.' Being on a voyage he was taken by pirates and sold into slavery at Corinth, where he became tutor to the sons of a rich citizen, but died in the greatest misery, B.C. 324. His reputation procured him a visit from Alexander the Great, who asked Diogenes if there was anything in which he could gratify him. 'Only,' he answered, 'do not stand any longer between me and the sun.' Some moral 'sentences' are extant under his name, but they are thought to be apocryphal. The inhabitants of Sinope raised statues to his memory, and the marble figure of a dog was placed on a high column erected on his tomb.

DIONYSIUS OF HALICARNASSUS, author of an hist. work entitled 'Roman Antiquities,' abt. 30 B.C.

DIOPHANTUS, a mathematician of Alexandria, who flourished about the year 480 A.D. He originated a peculiar department of Algebra, which still bears his name. It relates to questions about whole numbers, squares, cubes, primes, &c. The best edition of his work is by Fermat.

DIOSCORIDES, PEDANIUS, a celebrated Greek physician and botanist, was born at Anazarba in Cilicia. The dates of his birth and death are not known; but it is generally believed that he lived in the reign of the emperor Nero. He is said to have been named *Phacas*, from his face being marked with spots like lentils. He was a soldier in his youth, and it is surmised he may have been attached to the army as physician. He practised medicine, and he tells us himself that he travelled over Asia Minor, Greece, Italy, and part of ancient Gaul, in quest of plants. His works contain chiefly an account of the medicinal virtues of the plants he describes; and their principal value appears to consist in their having given rise to numerous learned disquisitions, and an immense deal of controversy, in after times, as to the identity of the species he mentions. This, no doubt, contributed much to advance the knowledge of botany amongst the medical men who succeeded him, and who in these times were almost the only persons who studied plants. The first printed edition of his works appeared at Venice, in the original Greek, in 1499; but since then many editions have been printed, and translations made into almost every language of Europe, except English. In late times Tournefort made much use of his works, and still more lately they have given origin to the 'Flora Græca' of Sibthorp, which has been edited by Sir James Edward Smith. A genus of plants has been named after him by Plumier; the *dioscorea*, a genus which contains the yam. [W.B.]

DISNEY, JOHN, an English divine, distinguished for his activity and disinterestedness as a magistrate, 1677-1730. A descendant of the same name, chaplain to Bishop Law, and author of religious biographies, 1746-1816.

D'ISRAELI, ISAAC, the son of a Venetian merchant, of Jewish extraction, who had settled in England, was born at Enfield, near London, in 1766. His education was chiefly received at Am-

sterdam and Leyden, and was completed by a tour in France and Italy. Coming, at an early age, into possession of an independent fortune, he was able to devote the whole of his long life to literary study and composition. In the first stage of his authorship he contributed poems to the 'Gentleman's Magazine,' and other periodicals, and wrote some small novels, of which the satirical piece called 'Flinm Flams' is said to have been one. But he soon began to confine himself to his favourite department of Literary History; commencing, when he was twenty-five years old, those miscellaneous collections and remarks, which, though pleasant and gossiping rather than philosophically critical, have preserved and disseminated a very large mass of curious and valuable knowledge. In 1791 appeared the first volume of his 'Curiosities of Literature,' which were extended to three volumes, gradually enlarged, and followed by a second series in 1823. In 1795 he published his 'Essay on the Literary Character,' and, in 1796, his 'Literary Miscellanies.' The most interesting of his works, 'The Calamities of Authors,' and 'Quarrels of Authors,' appeared in 1812, 1813, and 1814; and these were followed, in 1816, by his 'Character of King James I.' A subsequent work, the 'Commentaries on the Life and Reign of Charles I.,' gained for him from Oxford the honorary degree of D.C.L. In 1839 he became blind, but was still able to complete his 'Amenities of Literature,' which had been designed to be a part in a survey of the 'Literary History of England.' Mr. D'Israeli died in the beginning of 1848, at his country-seat, Bradenham house, in Buckinghamshire. The late chancellor of the exchequer is his eldest son. [W.S.]

DOBSON, M., a physician and natural philosopher, died 1784. His wife, SUSANNAH, a clever miscellaneous writer, close of the century.

DOBSON, WILLIAM, a distinguished English portrait and historical painter, of the reign of Charles I., was born in London in 1610, where he died in 1646, at the early age of thirty-six. Dobson's education consisted chiefly in copying pictures by Titian and Vandyck, which he met with at his master's, Sir Robert Peake's. He was recommended to the king by Vandyck, and succeeded him as Sergeant Painter to Charles I., who had a high opinion of Dobson, whom he called the English Tintoret. — (Walpole, *Anecdotes of Painting in England*, &c.) DODDRIDGE, SIR J., an Eng. jurist, 1555-1628.

DODDRIDGE, PHILIP, D.D., the son of an oilman, was born in London on 26th June, 1702. Both parents being very pious, took extraordinary

pains to rear their numerous family in the nurture and admonition of the Lord; and Philip, the youngest, was introduced by his mother to a knowledge of the characters and scenes of the Old and New Testament history through means of some Dutch tiles that lined a corner of their sitting-room. The associations of those primitive pictures, together with the remembrance of the sound and pious reflections his parent founded on them, made indelible impressions on his infant mind. In his childhood he was left an orphan; and the little patrimony bequeathed to him having been lost through the imprudent management of the trustee appointed by his father, young Doddridge was indebted to the kind liberality of Mr. Samuel Clarke, a dissenting minister, and master of a private school at St. Alban's, who took him into his house, and educated him gratuitously. Doddridge repaid the kindness of his disinterested and pious benefactor by not only making uncommon attainments in learning, but by strong and beautiful evidences of personal religion. His early wish was to devote his life to the ministry, but great difficulties lay in the way to the accomplishment of this object; and while he was anxiously pondering the matter in his mind, he received an offer from the duchess of Bedford, who lived in the neighbourhood, and had heard of his character and circumstances, to send him to either of the two universities, on condition of his becoming a clergyman in the Church of England. So tempting an offer it required strong and conscientious principles to resist. But his dissent being the result of enlightened and matured conviction, he respectfully and gratefully declined the proposal of his noble patroness. His old and steady friend, Mr. Samuel Clarke, now undertook to bear the expense of his education; and Doddridge, regarding this offer as indicating the leading of Providence, gladly embraced it, by repairing to the academy of Kilworth, in Leicestershire, where, under the auspices of the learned and pious Dr. Jennings, he pursued the requisite studies with great ardour. On 22d July, 1722, he was licensed to preach, and such was the fame of his pulpit ministrations that he soon found himself settled over the congregation at Kilworth, as successor to Dr. Jennings. At the end of seven years he removed to Harborough, to be assistant to the venerable Mr. Some; but this situation, too, he ere long relinquished, to take the superintendence of a dissenting academy for the training of young ministers, an office to which his high celebrity as a scholar and divine procured his unanimous appointment by the electors. A very pressing invitation from the Independent congregation in Northampton, enforced by the advice of Dr. Watts and other friends to accept it, led him to a new sphere of labour; and from 24th December, 1729, he discharged in that town the double duty of pastor of a large congregation and tutor to the Theological Seminary. Seldom has there been a more laborious—never was there a more conscientious life than that of Doddridge. To serve his Divine Master was the ruling principle of his heart; and to the advancement of the sacred cause he brought all the energies of an active mind, and all the stores of an almost boundless knowledge daily to bear. Many students repaired from all parts of the kingdom to enjoy the benefit of his prelections; and

amongst these not a few who afterwards rose to distinction, not among the dissenters only, but in the established churches of England and Scotland, in America, and even in Holland. The university of Aberdeen conferred on him, in 1736, the honorary degree of Doctor in Divinity. He was a voluminous author. Amongst his works, all of which have long been well known and highly valued in the religious world, we may enumerate his 'Sermon on Regeneration,' his 'Sermons to Young People,' his 'Life of Colonel Gardner.' But the principal are the 'Rise and Progress of Religion in the Soul,' and the 'Family Expositor.' Dr. Doddridge's frame, never robust at any time, was enfeebled by his incessant labours, and severe cold having settled on his lungs, and been followed by symptoms of consumption, he was advised to try the effects of a sea voyage. On 30th September, 1751, he sailed from Falmouth in a vessel bound for Lisbon, where he landed on 13th October, and being completely exhausted he sank in a few days, expressing to Mrs. Doddridge, who accompanied him, his firm faith and joyful hope in Christ. DODSLEY, ROBERT, the well-known bookseller and miscellaneous writer, was born of poor parents, and though he commenced life as a footman, rose to considerable eminence as a dramatic author and essayist, and acquired a handsome fortune as a publisher. His literary connections and friendships include the first names of last century. The most celebrated of his theatrical pieces is 'Cleone,' a tragedy, and the most useful of his speculations the 'Annual Register,' commenced 1758, in conjunction with Edmund Burke. 'He bore an excellent private character, was modest in his prosperity, grateful to his early friends and patrons, and disposed to bestow on others the same kind assistance which he himself had experienced.' Born at Mansfield 1703, died 1764.

Domenichino painted a long time at Rome, and his picture of the Communion of St. Jerome there, in the Gallery of the Vatican, is considered one of the masterpieces of Italian painting, yet the painter received only ten guineas for it. Able in drawing, expression, and composition, Domenichino had many enemies, by whom he was much persecuted, both at Rome and Naples. He died in the latter city April 15, 1641, and it was supposed that he was poisoned by the agency of the notorious triumvirate Spagnuolotto, Corenzio, and Giambattista Caracciolo, known as the 'Cabal of Naples.' Domenichino is generally considered the ablest of the pupils of the Caracci.—(Bellori, *Vite de' Pittori*, &c.; Passeri, *Vite de' Pittori*, &c.) [R.N.W.]

DONIZETTI, GAETANO, was born at Bergamo in the year 1798. His father destined him for the law, but for which profession he himself had no liking. His first taste seems to have lain towards painting, but he ultimately devoted himself to the study of music, in which he achieved a very high and prominent position. His first master in music was the celebrated Simon Mayer, and he studied for three years at the conservatory of Bologna under Mattei. He composed in all sixty-three operas, the first of which, 'Enrico di Borgogna,' was performed at Venice in 1818, in which Madame Catalani sustained the principal character, and in which Signor Fioravanti also took a part. Up to the year 1827 he had composed no fewer than nineteen operas, of which the 'Zoraide' was the most successful. In 1828 he ceased to write in the style of Rossini; and his own great originality first developed itself in 'Esule di Roma,' which was performed at the San Carlo at Naples, and in which Lablache sustained the principal bass part. This was his earliest triumph, and the new style gave ample promise of the future career of 'Il Maestro.' In the same year he composed other three operas. In

1829 he produced 'Il Paria' and 'Il Castello di Kenilworth,' at the San Carlo. In 1830 he wrote four operas for the same establishment, and an Oratorio, 'Il Diluvio Universale.' For the carnival of 1831 he composed his 'Anna Bolena,' which established his reputation, and after which every manager in Europe became desirous to have a work from the great composer. His next opera was 'Fausta.' In 1832 he composed 'Ugo Conte di Parigi,' the 'Elisir d'Amore,' and 'Sancia di Castiglia;' next year he wrote 'Il Furioso,' 'Parsina,' and 'Torquato Tasso.' 1834 gave to the world his other masterpiece, 'Lucrezia Borgia,' and 'Maria Stuarda.' In the same year he composed 'Rosmonda d'Inghilterra.' In 1835 he wrote 'Gemma di Vergi,' 'Marino Faliero,' which was first performed in London, and the world-renowned 'Lucia di Lammermoor,' which was brought out at San Carlo. In 1836 he composed 'Belisario' for the carnival of Venice, and produced 'Il Campanello,' 'Betly,' and 'L'Assidio di Calais.' In 1837 he wrote two operas, namely, 'Pia di Tolomei' and 'Roberto Devereux.' In 1838 he composed 'Maria di Rudenz;' in 1839 'Gianni di Parigi;' and in 1840 'La Fille du Regiment' for the Opera Comique of Paris. This year he also produced 'Les Martyrs' and 'La Favorita.' In 1841 he composed 'Adelia,' in 1842 'Maria Padilla' and 'Linda di Chamouni.' In 1843 he produced his 'Don Pasquale' for Grisi, Mario, Tamburini, and Lablache, which was brought out at the Italian Opera of Paris. In the same year he composed for Venice his lyric tragedy, 'Maria di Rohan,' and for the Academie Royale of Paris his 'Don Sebastian de Portugal.' At the carnival of Naples in 1844, his sixty-third and last opera 'Caterina Cornaro,' was produced, while two unfinished operas were amongst his manuscripts, and he was preparing another comic opera for Grisi, Mario, Ronconi, and Lablache. At this time his mind, which had been so severely tasked, utterly gave way, and he was first taken to a *Maison de Santé* at Vitry, near Paris: subsequently his nephew, who was then director of music to the sultan at Constantinople, had him removed to a house at the Champs Elysées. He was ultimately conveyed to Bergamo, where it was thought the scenes of his early life might assist his recovery; but all was of no avail. He died on the 8th of April, 1848, after five days' struggle, surrounded by his early friends and admirers. Donizetti was married to Virginia Vasselli, the daughter of an advocate in Rome, who died in Naples in 1835. Donizetti succeeded Zingarelli in the direction of the conservatory at Naples, and held office as chapel-master to the imperial court of Vienna. He composed, besides his operas, various detached vocal pieces, masses and vespers, a *Miserere*, some quartetts, overtures, variations for the piano-forte, a Monody for the death of Malibran, &c. Donizetti was an excellent poet as well as a musician, and wrote some of his own *libretti*. In rapidity of composition he rivalled Rossini, and has been known to score an opera in twenty-four hours, a period barely sufficient for the mere manual labour of writing down the notes. [J.M.]

DRAKE, FRANCIS, an English antiq., d. 1770.

DRAKE. FRANCIS DRAKE, the chief of the English Naval Worthies of the reign of Elizabeth, and the first man who circumnavigated the globe in a single voyage, was born in 1546, near Tavistock in Devonshire. His father was a poor clergyman; and Francis was the eldest of twelve sons, nearly all of whom were bred to the sea. He was apprenticed while a lad to the master of a coasting bark, which sometimes made voyages to Holland and France. In this humble employment Drake grew up to be a thorough seaman; and he also by his steadiness and good conduct so gained the esteem of his master, that when the old man died, he bequeathed his bark to the diligent and skilful young mariner.—Drake continued his old master's trade in her for some time; but his spirit of adventure caused him at last to sell her, and employ the proceeds in a trading voyage to the West Indies in 1565 and 1566, during which he suffered much ill usage and loss from the commander of some Spanish cruizers. On Drake's return he joined Sir John Hawkins in an adventure to the Spanish Main, which proved calamitous at the time, but which must have done much in qualifying Drake for his subsequent achievements. The little squadron which Hawkins and Drake commanded, was treacherously attacked by a Spanish fleet in the port of St. Juan de Ulloa, and four out of the six English ships were destroyed.—Drake returned to England with the loss of all his property; but with the gain of valuable experience, and with an increase to that keen antipathy to the Spaniards, which marked him throughout life, and which is best paralleled by that which Nelson afterwards felt to the French. In 1572 Drake succeeded in fitting out three small vessels, and sailed to the Spanish Main on a voyage of reprisals. He failed in an attack on the city of Nombre de Dios; but he landed on the isthmus of Panama, and captured a large treasure, which was being conveyed on mules to Nombre de Dios for exportation to Spain. It was in the course of this adventure that one of the native guides who led the English across part of the isthmus, showed Drake a lofty tree from whose summit might be discovered the Pacific ocean, along which no European flag, save that of Spain, had hitherto ever floated, and the coasts of which were believed to teem with treasure-cities of boundless magnificence. Drake climbed this 'goodlie and great high tree,' as he himself termed it, and gazing thence on the broad Pacific, he with great solemnity 'besought God to give him health and life once to sail an English ship in those seas.'—This was no barren vow of transient enthusiasm. On his return to England, Drake prepared a squadron for a voyage into the South Pacific through the straits of Magellan. It consisted of five vessels, the largest of which was only of 500 tons. Drake sailed on the 13th December, 1577, and on the 20th May, 1578, he anchored in the port St. Julian of Magellan. There one of the companions of Drake, named Thomas Doughty, was tried by Drake and the other officers of the fleet, and put to death on a charge of mutiny and conspiracy. This execution has long been made a subject of heavy imputation on Drake's character, but Sir John Barrow in his late work, 'The Naval

Worthies of the Reign of Elizabeth,' has printed some contemporaneous records of Doughty's trial, which prove his sentence to have been just, and his death necessary. Drake emerged into the Pacific from the perilous straits of Magellan on the 6th of May, but his ship, the *Golden Hind*, struggled with difficulty through heavy gales; and all her consorts abandoned her or perished. With his one vessel Drake now began his attacks upon the Spanish treasure-ships that were sailing in fancied security along the coast of the Pacific; and the *Golden Hind* was soon deeply laden with Spanish gold and other valuables. Drake now thought of returning home; but an attempt to re-pass the straits would have thrown him within the reach of a large force, which the enraged Spaniards had collected to intercept him. He resolved, therefore, to seek a passage home round the north of America; and by unrivalled boldness and skill, worked his ship to a high latitude along the western coast of the Atlantic. Yielding at length to the increased severity of the winter season, and the natural obstacles which his crazy bark and worn-out crew encountered, Drake steered westward across the Pacific for the Philippine islands, and thence for the Cape of Good Hope. He doubled the Cape on the 15th June, 1580; and on the 25th September in that year, the *Golden Hind* came safely to anchor in Plymouth harbour, having been two years and ten months at sea, during which time she had sailed round the whole world.—Drake's exploits, and the treasure which he had brought home, made all England ring with his renown. Queen Elizabeth knighted him, and dined in state with him on board the *Golden Hind*. The Spaniards were loud in their protestations, and demanded that Drake should be given up to them as a pirate. There was at this time nominal peace between the two countries; but Spanish troops had often aided the rebels against Elizabeth in Ireland, and England, on the other hand, had sustained by men and money the revolt of the Netherlands against Spain. In the New World the arrogant claims of the Spaniards to exclude all other nations from the seas of Central and Southern America, and the cruelties which their officers practised, had created a system of reprisals; and 'no peace beyond the line,' was the rough and ready maxim of the English mariners. The nation adopted it. Queen Elizabeth refused to give up or to punish Drake; and in the open war which soon broke out between her and Spain, Drake did noble service to his country and his queen. In 1585 he attacked and burnt the collected shipping in Cadiz harbour, and thereby delayed for a year the sailing of the Spanish Armada against England. And when in 1588 Spain sent that huge agglomeration of her fleets and armies against our shores, Sir Francis Drake was the boldest and the sagest among that bright band of our naval heroes who baffled and beat the haughty Spaniards; and who forced the shattered remnants of their so-called Invincible Armada to flee in disaster and disgrace round the north of Britain and Ireland back to the harbours of the peninsula, which they had quitted in such confidence of vindictive success. In 1595 Drake sailed on his last voyage in conjunction with his old comrade Sir John Hawkins, on an expedition against the Spanish West Indies. The

English were unsuccessful in this enterprise. The suffered severely by the diseases of the climate, which the brave Sir Francis fell a victim. Admiral Drake died on board his own ship off Porto Bello, on the 28th January, 1596. [E.S.C.]

DROUET, JEAN BAPTISTE, master of the post in the village of Sainte-Menehould, and once a soldier of the dragoons, has obtained a remarkable name in the history of the French revolution by his arrest of Louis XVI. when he attempted to fly the kingdom, 20th June, 1791. His curiosity was awakened by the arrival of travellers under very unusual circumstances, curiosity ended in suspicion, and his suspicions were confirmed by comparison of the king's portrait, engraved on French assignats at that time, with the pretence Baron Korff in the Berlin. With the zeal of a patriot, and the decision and boldness of a soldier, he galloped by a cross road to the town of Varennes, and prepared his measures so effectually, notwithstanding the near neighbourhood of Choiseul and Bouillé, that the carriages were stopped, and the king conducted to Paris. If Lafayette was justifiable in declaring the flight of the king 'infamous,' and the country had reason to tremble for its independence with Louis in the army of the coalition, it is impossible to deny that Drouet's arrest of the king was an act of patriotism; and viewing it in this light, the National Assembly rewarded him with a gift of 30,000 francs, while the people, in 1792, returned him to the National Convention. In the capacity of deputy he voted for the most violent measures, and had the atrocity to propose that all the English in France should be shot. In 1793 he accompanied the army of the North as commissary, and was shut up in Manbeuge, when that place was reduced to

the last extremity by the Austrians, and was taken prisoner in a sortie which he headed. Being confined in the fortress of Spitzberg, situated on a rock some two hundred feet high, he attempted to escape by means of a parachute, but falling heavily to the ground, was captured again. He was subsequently exchanged with some of his comrades against the king's daughter, and sat in the council of 500. He joined the conspiracy of Babeuf against the order established after the 9th Thermidor, but was permitted to escape by the Directory, and, after an adventurous career abroad, became sub-prefect of Sainte-Ennebold under the consulate. In 1815 he appeared as deputy of the Marne in the Chamber of Representatives during the hundred days, and the following year was banished from France with the regicides. In 1824, an old man who had been known some years past under the name of Merger, was esteemed a good Christian, died at Maçon, when people were surprised to discover that he was no other than the 'bold dragoon' who arrested the king at Varennes. DRYANDER, F. E., a Flem. his., 16th century.

DRYANDER, JONAS, a Swed. natur., 1748-1810.

DRYDEN, JOHN, born in 1631, was the grandson of Sir Erasmus Dryden, or Driden, of Canons-shby, in Northamptonshire. From his father,

the third son of the family, he inherited a small estate, yielding fifty or sixty pounds a-year. He was sent from Westminster School to Trinity College, Cambridge, where he resided till 1657. For the next three years he was engaged in public business in London, under his mother's cousin, Mr Gilbert Pickering, a puritan, and a partizan of

Cromwell. His principal kinsmen on the father's side belonged to the same party. Thus trained and thus connected, he began his literary career by verses on the death of the Protector; but his disinclination to the principles in which he had been brought up, and the vacillation of opinions by which he was distinguished through life, showed themselves very speedily.—The Restoration, occurring when he was in his thirtieth year, excluded him for the time from government employment and patronage; and he at once devoted himself to literature as a profession. Having to rely on it for support, he did not long content himself with obscure drudgery in prose, or with verses, though he wrote many, on public events. Yet his '*Annus Mirabilis*,' celebrating the eventful year 1666, presaged his eminence as a descriptive and didactic poet. But the stage, now restored, and becoming the fashionable amusement, offered itself as the only means through which his pen could furnish a livelihood; and, in the course of twenty-five years, he wrote twenty-seven dramas. The most remarkable of these were his Heroic Plays, pieces of a kind which, imported from France, was the favourite during the greater part of the reign of Charles II. These have aptly been described by Sir Walter Scott as being just metrical romances of chivalry thrown into the form of dialogues. In this unnatural but seductive class of compositions Dryden was unsurpassed; and, amidst all their exaggeration and unreality, his Tragic Dramas are works of great genius. His Comedies, belonging to the Spanish school which had become so popular, and whose chief merit was sought in complex ingenuity of plot, have little literary value; and they are tainted, as deeply as any plays of their time, by the moral depravity which disgraced the restored English stage till after the close of the seventeenth century. Indeed, the pain which one feels in seeing the intellectual powers of Dryden wasted on his serious dramas, is aggravated when we contemplate the moral degradation displayed by his comic ones.—Hardly less mortifying is it to know, that the great poet was conscious of his own inaptitude for the writing of plays; and that he panted to display, on a field better adapted to his diffusive genius, the pomp of imagery, the strength of passion, and the magnificent skill of versification, which he felt to be but ill bestowed on his heroic and tragic pieces of theatrical declamation. It was the cherished dream of his life to give to the English language a national epic, whose theme would probably have been the exploits of the romantic King Arthur. There are, in fact, two circumstances only that can at all console us for the lamentable misapplication of Dryden's labour. In the first place, the writing of his heroic plays served as his apprenticeship to the art of versification and expression. Out of his rhymed dialogue arose that mastery of the English heroic couplet which he was the first to acquire, and in which no succeeding poet has nearly equalled him. Secondly, the prefaces, dedications, and essays, with which he accompanied his dramas, exhibited him at once as the earliest writer of regular and elegant English prose, and as the first who can be said to have aimed in our language at anything like philosophical criticism. Those prose fragments of his are still instructive to the critic of poetry; and

they contain some of the most felicitous specimens of style which our tongue has ever produced.— During the few years next after the Restoration, dramatic composition was almost his only employment. Of his heroic plays of this period, which

[Dryden's House in Fetter Lane.]

were written in rhyme, the finest were the two parts of 'The Conquest of Granada.' He was under an engagement to write plays for the king's theatre, which gave him an income of more than three hundred a-year: in 1665 his circumstances were a little improved by his uncomfortable marriage with Lady Elizabeth Howard, daughter of the earl of Berkshire; and in 1670 he received, with a salary (irregularly paid) of two hundred a-year and the famous butt of wine, the joint offices of historiographer-royal and poet-laureate. In the latter part of Charles's reign the fashion in dramatic matters began to change: and this, with jealousies of playwrights and courtiers, gave birth to the celebrated burlesque play called 'The Rehearsal,' of which Dryden, under the nickname of Bayes, was the principal victim. Politics now offered to the laureate a new kind of theme, of which he availed himself by publishing, in 1681, his 'Absalom and Ahithophel,' the best of all poetical satires. 'The Medal' and 'Mac-Flecknoe,' works of the same kind, followed immediately. Now, likewise, he began to write tragedy in blank verse, 'All For Love' being his most successful experiment of the kind. In the 'Religio Laici,' also, he presented to the public, in 1682, his first elaborate attempt at didactic poetry. The tone of hesitation, and the character of the arguments, adopted in this defence of the Church of England, betrayed a state of mind leading by an easy progress to the change of faith which the poet soon avowed. In 1685, soon after the accession of James II., Dryden was received into the Church of Rome. His conversion secured him in court favour, and was rewarded by an addition of a hundred pounds a-year to his pension. But it was probably sincere; and the new creed was unflinchingly adhered to when it had become unprofitable and dangerous. It produced rich poetical fruit in

'The Hind and the Panther,' in which the dryness of dissertation is enlivened by ingenious allegory.— The Revolution, taking place in the poet's fifty-seventh year, deprived him of his pensions, and his royal and courtly patrons; but it neither lowered the place which he held as the first poet of his time, nor damped the ardour of his literary exertions. The last twelve years of his life, though spent in hard toil and under heavy discouragement, produced some of his best works. In 1690 he gave to the stage his tragedy of 'Don Sebastian,' the best and most interesting of his serious plays. In 1697, amidst many other labours, he threw off at heat his 'Alexander's Feast,' one of the most animated of all lyrical poems, though not conceived in the highest tone of lyrical inspiration. In the same year appeared his nobly spirited translation of Virgil, for which he had trained himself by previous versions from the classics published in the volumes he called 'Miscellanies.' Lastly, in the spring of 1700, were published his 'Fables,' which, imitating in verse the prose of Boccaccio and remodelling (not always for the better) the antique poetical pictures of Chaucer, he not only showed that his warm imagination burned as brightly as ever, but that his metrical skill had been increasing to the close of his life. That life was about to end. Gout and gravel had long disturbed him; and erysipelas in one of his legs, terminating in mortification, destroyed him on May-day, 1700. He was buried in Westminster Abbey, between the grave of Chaucer and that of Cowley. [W.S.]

 DUBOIS-CRANCE, EDMUND LOUIS ALEXANDRE. Dubois-Crance performed a part in the French revolution which may be related in few words, but from which the most important consequences have resulted. He was the propounder of that formidable military engine known as the *conscription*, the first idea of which he submitted to the national convention in 1793 as reporter of the military commission. 'In a nation that would be free, when surrounded by powerful neighbours and rent by faction,' he remarks, 'it behoves every citizen to be a soldier and every soldier to be a citizen, and there is no hope of this, France is near the term of her annihilation. . . . If you once tolerate exemptions and substitutes, all is lost.' The advice of this stern soldier and honest republican was responded to by a decree for the levy of 300,000 men with promotion from the ranks, and shortly afterwards by Barrère's famous proclamation for a levy *en masse*. One other memorable service was performed for the republic by Dubois-Crance, in the reduction of Lyons, and such was the esteem in which

military talents were held that he was appointed, 1799, the successor of Bernadotte as minister of war. He was a stout opponent of the revolution which Napoleon attained the supreme power, and ever after remained in the obscurity of private life.

He is the author of several military and political memoirs publ. between 1789 and 1804, and two pamphlets written against Barrère 1795. n at Charleville 1747, d. at Rhétel 1814. [E.R.]

UCOS, JEAN FRANÇOIS, one of the clearest and most honest in accepting the consequences of his convictions, of the party of Girondins, was born at Bourdeaux 1765, and was named as deputy for his native city to the Constituent Assembly in 1791, and to the National Convention in 1792. His name is not identified with any particular measures, but his oratory was brilliant, his advice listened to with respect, and his influence felt in the debates, in which he partook with indefatigable zeal. He was more tolerant than the other members of the Gironde, and tried to promote a fusion of republicans of every shade of opinion. He shared the fate of his party, though somewhat later, through the influence of Marat, and was guillotined at the early of twenty-eight, 1st November, 1794. [E.R.]

UCOS, ROGER, like many other actors in the French revolution, was an advocate, and embraced extreme opinions at the commencement of that revolution, succeeded in talking his way to the Na-

tional Convention in 1792. He was then thirty-eight years of age, having been born in 1754. There is nothing to show from the beginning to the end of his career, that he had any other talents than those of a respectable lawyer, or any principles but those which he could adopt with the greatest eclat for the time being. In this spirit he seems to have voted for the death of the king 'without delay,' and afterwards opposed himself to the Girondins. In January, 1794, he served the Jacobin's Club as president, and after a few ups and downs, had settled as a magistrate in a country village, when Barras drew him from his retirement, and he became a member of the directory and the council of elders. On the 18th Brumaire (9th October, 1799), he lent himself to the *coup d'état* of Napoleon, and was rewarded with the third place in the provisional consulate, as the Abbé Sieyès was with the second. On the 20th, Buonaparte, Sieyès, and Ducos, held their first sitting in the Luxembourg, and on Sieyès's suggesting that one of them should act as president, Ducos promptly replied, — 'Vous voyez bien que c'est le general qui préside,' (the general presides of course!) Ducos seconded whatever Buonaparte proposed, and though Sieyès felt that he was reduced to a mere cypher, they proceeded to frame the new constitution, which was adopted by the votes of the people, and Buonaparte being confirmed in his office of first consul, replaced his former colleagues by Cambaceres and Lebrun. From this period Ducos is known as a member of the senate, and of the upper chamber during the hundred days. He was proscribed by the Bourbons in 1816, and died the same year in consequence of being thrown out of his carriage. His brother, NICOLAS, Baron Ducos, acquired distinction as one of Napoleon's generals, and survived him many years. [E.R.]

DUMONT D'URVILLE, JULES SEBASTIAN CÉSAR, a celebrated French navigator, was born at Condé-sur-Noireau, 1791. In 1822 he went out with M. Duperrey as second in command, and

made the tour of the world in the corvette Coquille. In 1826 he was appointed captain the Astrolabe in a second voyage to the S. Seas to discover, if possible, some traces of Perouse. His voyages have enriched science with valuable collections of objects and discoveries. France owes to him the Venus of Milo, besides memoirs which illustrate his vast knowledge and intrepid seamanship. He had been named admiral, when he perished with his wife and by the accident on the Versailles railway, the carriages were burnt on the 8th of May.

DUMOURIEZ, ANNE FRANÇOIS DUPERRÉ, a commissary in the French army, author of a translation of 'Ricciardetto,' an It. poem, 1700-1794.

DUMOURIEZ, CHARLES FRANÇOIS DUPERRÉ, son of the preceding, a distinguished general of the French revolution, disgraced by his attempt to act the part of a Monk, was banished to Cambrai in 1793, and died in exile at Turin, near Henley-upon-Thames, 1823. He was educated both as a man of letters and a soldier, and at twenty-four years of age, had seen several campaigns, and received twenty-two wounds in the cavalry service. Disappointed with the career of captain, though graced with the cross of St. Louis, and a pension of 600 livres, he endeavoured to open a road to fortune by combining the talents of a military adventurer and a politician. He acted the scene of his intrigues being successful on the little island of Corsica, the kingdom of Poland, and Sweden, and his reward for the services of these services a short sojourn in the Tuileries, which favour was conferred upon him by Louis XV. On the accession of Louis XVI. he obtained the command of Cherbourg, with the title of comte de Dalmat, but it was not until the revolution broke out that his ambition, his love of adventure, his dauntless courage, and his diplomatic talents, brought into full play, or his condition elevated him above obscurity. Having attached himself to the Girondins, he became in 1792, minister for foreign affairs, and on their dismissal by the king, resigned his duties in the field, and at length found himself in command of the army opposed to the duke of Brunswick. His determined stand in the war of Argonne, gave the opportunity for Kellerman's victory, his dragoons, and other divisions of the army defeated the Prussians at Valmy (20th Sept. 1792), after which, it appears, he negotiated the king of Prussia, allowing him to withdraw his defeated army on condition of being permitted to pursue his ambitious designs for acquiring the sovereignty of Belgium. On the 12th of November he defeated the Austrians at the battle of Maastricht, took Liege, Antwerp, and shortly afterwards Breda in Holland, but was beaten at Wimpfen, 18th March, 1793, by Prince Coburg, with whom he entered into secret negotiations for restoring the constitutional monarchy; his being to march upon Paris with the Austrians to dissolve the Convention, and proclaim the dethronement of Louis Philippe king. Reports of his treasonable practices, however, had reached the ears of government, and a commission arrived at his quarters with power, if necessary, to order

er arrest. He succeeded, by surprise, in convincing the members of this commission to an Austrian prison; but it was too late to turn the course of events: his troops were already in revolt, and the next morning (3d April, 1793) he barely succeeded in escaping with his life across the border.

A reward of 300,000 francs was offered for his head, but he evaded pursuit, and at length found a safe asylum in England, where he enjoyed the friendship of the duke of Kent, Mr. Canning, and many other distinguished persons. His career is illustrated by a great number of works from his pen, the bare titles of which would almost occupy the space of this notice; his 'Memoirs of the Revolution' may be mentioned as the most interesting.

DUNS SCOTUS, JOHN, 'the subtle doctor,' was born about A.D. 1265. The place of his birth has not been satisfactorily ascertained, Scotland, England, and Ireland laying claim to the honour.

He points to Dunse, in Berwickshire, as the spot of his nativity, and others contend for Dunstance, in Northumberland. The probability is that he was of Scotch extraction. He received his earliest education at a Franciscan monastery in Newcastle, and afterwards studied at Merton College, Oxford, in which he became professor of theology

in 1301. His prelections on the 'Sentences' of Peter Lombard are said to have been attended by a crowd of 30,000 students, then resident at Oxford. Though such a statement appears to be a romantic exaggeration, it certainly proves the prodigious fame of the lecturer. In 1307 the

philosopher removed to Paris, by command of the general of his order. He had already gained great notoriety in the French capital by a public disputation on behalf of the immaculate conception of the Virgin. Immense applause attended his lectures in Paris, and he was styled *Doctor subtilis*.

In 1308 he was ordered to Cologne to found a new university there, and defend the same theological dogma. On arriving at that city, the inhabitants met him in a body, and he was drawn into the ancient town in a triumphal car. Soon after his arrival, however, he was seized with apoplexy, and died in November, 1308, at the early age of forty-three. Duns Scotus excelled in the knowledge of canon and civil law, in philosophy, mathematics, and theology. His mind was eminently fitted for abstruse discussion, and subtle dialectics, and was sharpened into a morbid acuteness and pertinacity by continued practice. He displayed keenness and versatility in detecting invisible distinctions; in multiplying hypotheses which differed from each other only in some verbal incidents; in untwisting every thought and proposition as by an intellectual prism; in speculating upon themes above the reach of human knowledge, and in the multiplication of ingenious theories without proof to sustain them, or utility to recommend them. Hypothesis supplanted investigation, and the interpretation of nature, or the question, what is? was superseded by previous conceptions of what might or should be. The Franciscans gloried in Duns Scotus, as their rivals the Dominicans extolled Thomas Aquinas. Aquinas was the more orthodox, and Scotus was at least semipelagian. Scotists and Thomists divided the mediæval schools, and the former as being realists, were opposed to the Occamists who were nominalists, or held that universal terms were simply names, and not the signs of actual existences. The 'Opera Positiva' of Duns Scotus are very numerous, and have not been printed; but his 'Opera Speculativa' were published in 12 folio volumes at Lyons in 1639, the editor being an Irishman of the name of Luke Wadding. Six of these tomes are filled with the famed prelections on Peter Lombard, already referred to. The industry that could by its own composition amass such a huge collection of MSS. during so short a life, must certainly have been equal to the genius of the great schoolman. [J.E.]

DUPUYTREN, WILLIAM, Baron, born at Pierre Buffière, 1777; died at Paris 1835. One of the most distinguished surgeons of modern times, and an eminent example of the beneficial results of the system of public competition established in France. By his industry and talents he became surgeon to the Hôtel Dieu at twenty-six, and professor of surgery at thirty-three. He visited the hospital morning and evening at six o'clock, and for twelve years was never once absent; each morning he attended to 300 patients, delivered a clinical lecture, performed several operations, gave advice to some hundreds of out-patients, and then walked home to breakfast at half-past ten. After this he saw his private patients, attended to the examination of medical students, performed his private operations, and at six in the evening again went the rounds of the hospital. His principal work is his memoir on artificial anus, which forms a happy application of the principles developed by John Hunter. Dupuytren possessed a remarkably fine person and strong constitution, so as to enable him to undergo immense bodily fatigue. But he possessed an extremely irritable temper, which made him insupportably capricious and inconsistent, often impelled him to rash and wrong acts that he would fain have recalled in his cooler moments, and ultimately destroyed his nervous system. He was a most successful practitioner, having left £296,000 to his daughter, Madame de Beaumont, besides £8,000 to endow a professorship, and £12,000 for a benevolent institution for medical men.

DÜRER, ALBRECHT, the most celebrated German painter of the sixteenth century, was born at Nürnberg in 1471, and became the pupil of

Michael Wolgemuth, the most eminent painter and engraver at Nürnberg at that time. Albert himself was not only distinguished as painter and engraver, but also as sculptor. The inscription on his tomb claims for him an unrivalled reputation in these matters—'light of the arts—sun artists—painter, engraver, sculptor, without ample.' He died at Nürnberg in 1528, worri-

death, according to Pirkheimer, by his wife's temper. The enlarged mind of Albert Dürer is shown in his persevering curiosity to travel into other countries, and personally ascertain what was the doing, as well as in the versatility of his accomplishments as an artist. He visited Italy in the year 1506, more especially Venice and Mantua, and his opinion that Giovanni Bellini was the best painter in Venice is preserved in one of his own letters to his friend Pirkheimer in Nürnberg. He also visited the Netherlands in the year 1521, and some interesting observations are preserved in the diary of this visit. (*Reliquien von Albrecht Dürer Nürnberg*, 1828.) He was the author of several works relating to his art, as, 'Instructions for Measuring with the Level and Circle,' &c., 1526; 'Some Directions with regard to the Fortification of Cities, Castles, and Villages,' 1527; and 'Four Books on Human Proportions,' 1528; all of which have been reprinted and translated. Albert Dürer's reputation as a painter is great in Germany, but he is better known as an engraver and designer out of his own country. His execution is exquisite as a copperplate engraver, but it is doubtful whether he actually executed many woodcuts; his most celebrated compositions are son series of woodcuts, but he is supposed to have drawn on the wood only. Of these remarkable series of designs the most valued are the Greater and Lesser, Passion; the Revelations of John; the Life of the Virgin; the Triumphal Car of the Emperor Maximilian I.; and the Triumphal Arch of the same emperor. The Great Passion appeared in twelve cuts in 1511; The Lesser Passion in thirty-seven cuts in quarto, also in 1511; the Revelation in sixteen cuts, folio, in 1498; the Life of the Virgin in twenty cuts, date of first edition uncertain. vo series relating to the emperor Maximilian appeared—the Arch in 1515, in ninety-two pieces, and the Car in 1522, in eight pieces. The works of Albert, paintings and cuts, have all a fine dramatic character of composition, abounding in sentiment and the highest order of expression, and though in form or design gothic in taste, correct and select in general proportions; but his draperies are hard and angular, and his costume is purely medieval.—(Heller, *Das Leben und die Werke Albrecht Dürers*, 1831; Nagler, *Künstler Lexicon*; Nagler, *Handbuch der Geschichte der Malerei*, 1837.) DWIGHT, TIMOTHY, S.T.D., LL.D., was born 14th May, 1752, at Northampton, Massachusetts, tracing his descent to Puritan ancestors, who had emigrated from England. His father, who was a pious and intelligent merchant, maintained a strict profession of religion; and his mother, who was a daughter of Jonathan Edwards, whose intellectual vigour and acumen she inherited, used every endeavour to impress the infant mind of her son with the principles of genuine morality and true religion. Timothy, in his childhood, gave evidences of extra-

ordinary quickness. But the judicious management of his parents averted the sad consequences which the early luxuriance of mental development too often produces in precocious youth. He was withdrawn from school, and, by the prudent direction of his mother, his education was conducted at home in such a manner as to develop the strength, and at the same time exercise the versatility, of her son's opening mind. At the age of thirteen he was considered fit for entering Yale College. During the third year of his attendance he devoted himself with indefatigable ardour to the pursuit of his studies, and his attainments in literature were as diversified as they were extensive. He acquired distinction especially by the well-known beauty of his penmanship, and by his skill in poetry and music. At the age of nineteen he was appointed tutor in Yale College; and the extent of his qualifications for this academic office will appear from the statement of the single circumstance, that he conducted his pupils during the first session through spherics and fluxions into the 'Principia of Newton.' With an ardent pursuit of the exact sciences he combined the rare talent of a passionate love of poetry; and he composed at this early age an epic poem on 'The Conquest of Canaan,' which is said to have contained many descriptive passages of great beauty. His first views were directed towards the law as a profession. But changing his thoughts, he determined to study for the ministry, and after completing the usual curriculum he was in June, 1777, licensed to preach the gospel in his native county of Hampshire, in the state of Massachusetts. Having accepted the office of chaplain to General Parson's brigade, he joined the army at West Point in October, and he continued in this situation till his father's death obliged him to quit the army and return home to the assistance of his mother. With filial devotion he exerted himself to ensure the support and comfort of his surviving parent and her young family, by accepting various civil appointments, to which he was prompted more by a sense of duty than by any congeniality of taste or inclination. In the midst of these occupations, however, his literary and theological pursuits were continued with unabated ardour. His talents and acquirements were widely known, and a vacancy having occurred in 1795 in the Presidency of Yale College, all eyes were directed towards Dwight as the best qualified to superintend the interests of that great literary institution. His administration ere long produced a happy revolution on the character of that seminary; by his mild and judicious management disorders were repressed, and the students, who had been deeply tinctured with infidel principles, and were consequently dissolute in their conduct, became distinguished for sober-mindedness, and the observances of Christian piety. Respect for the talents and acquirements of the president, as much perhaps as his discipline and lectures, led to this auspicious change. Dr. Dwight was indeed no ordinary man. He possessed a rare union of intellectual qualities, an independent tone of thinking, great originality of views, a masculine understanding, a playful fancy, and rich and lively powers of illustration. All these mental characteristics are advantageously displayed in his 'Theology,' a work which, although originally composed in the form of sermons, contains a complete system of

divinity, expounded on principles of scientific arrangement. Two other works came from his active pen, viz., 'Travels in New England,' in 4 volumes, and 'Posthumous Sermons,' in 2 volumes. In his sixty-third year Dr. Dwight's health began to decline, and after a severe and lingering illness his useful life was closed on 11th January, 1818. [R.J.]

EDGEWORTH, MARIA, was born in Berkshire on New-Year's Day 1767. She was a daughter of the first marriage of Richard Lovell Edgeworth, of Edgeworthstown, in the county of Longford.

but she never was in Ireland, unless for a few months in childhood, till 1782. In that year her father, succeeding to the family estate, took up his residence on it: and there his daughter's life was chiefly spent. Indeed, the only exceptions were short visits to England, France, and Scotland, and two years passed at Clifton, on account of the delicate health of members of the family.

The history both of Miss Edgeworth's authorship and of her life, was closely dependent on her affectionate and respectful association with her father. He was a man of much miscellaneous knowledge sanguine and speculative, who possessed great mechanical ingenuity and originality, and exhibited in other pursuits a singular mixture of benevolence self-esteem, and eccentricity. He sat in the Irish parliament which was elected in 1798, and advocated the views of the party of which Lord Charlemont was considered as the head. But his favourite occupations, besides mechanical contrivances and experiments, were the improvement of his estate and of the condition of his tenantry, and the education of the many children who gathered round him in the course of four marriages. Mr. Edgeworth's experience, as a landlord and magistrate placed at the disposal of his daughter that large stock of incidents and characters which she used in her novels with so much shrewdness, humour and kindly feeling; and though these works were written exclusively by herself, they were always submitted to his revision. His zeal in the training of his children, and his constant desire for improving the current methods of education, made the father and daughter joint authors in works intended for the use of youth.—The most ambitious of those joint productions is the series of essays entitled 'Practical Education,' first published in 1798, and afterwards reprinted and altered more than once. The series of story-books, however, is really more valuable as well as better known. It had been

begun in 1778, with the first part of 'Harry and Lucy,' written by Mr. Edgeworth and his second wife Honora Sneyd; but this story was not published for many years; while, in the meantime, it suggested 'Sandford and Merton' to Mr. Edgeworth's friend Mr. Day. It was at length inserted

[Edgeworth's-Town.]

in Miss Edgeworth's 'Early Lessons,' which afterwards received a continuation from her father; while her 'Parent's Assistant,' like all other parts of the series that came from her pen, showed a striking superiority in all respects over the portions that were not hers. Another joint work was the 'Essay on Irish Bulls,' published in 1803; and, Mr. Edgeworth having died in 1817, there appeared, in 1820, his 'Memoirs,' of which the first volume was written by himself, and the second by his daughter.—The series of Miss Edgeworth's novels began in 1801 with 'Castle Rackrent,' which was followed by the 'Moral Tales,' 'Belinda,' 'Leonora,' 'The Modern Griselda,' 'Popular Tales,' the 'Tales of Fashionable Life,' and 'Patronage,' and 'Harrington and Ormond' appeared in 1817. The venerable authoress reappeared with 'Helen' in 1834, and closed her labours more recently with the child's story of 'Orlandino.' She died at Edgeworth's-town in May 1849. [W.S.]

EDWARDS, GEORGE, an Engl. nat., 1693-1773.
 EDWARDS, JON., an Engl. divine, 1629-1712.
 EDWARDS, REV. JONATHAN, President of New Jersey College, was born 5th October, 1703, at Windsor, Connecticut. His extraordinary acuteness of intellect, which developed itself in his early boyhood, was applied in his mature age chiefly to the prosecution of moral and theological researches. He became greatly distinguished as a metaphysical and speculative divine. At the same time he prepared himself with diligence for the active duties of the ministry, in which, after a few temporary engagements elsewhere, he was permanently employed at Northampton, Massachusetts, having been ordained colleague and successor to his grandfather, Mr. Stoddart, 15th February, 1727. His ministerial labours in that place were followed by remarkable results. A religious excitement, celebrated in the annals of American revivals, took place in 1735 among his people. Multitudes were deeply impressed, and evinced their cordial reception of the truth by its sanctifying effects on their characters and lives. His church was greatly enlarged, and his stated congregation immense. But it happened in this case, as in all great and sudden movements, whether in the religious or political world, that numbers who had joined him were influenced by momentary feeling, rather than by deep and lasting conviction; and accordingly, while not a few were devotedly attached to him as their spiritual father, and an eminent servant of Christ, others became disgusted with his high-toned purity of principles, and his impartial exercise of discipline. So strongly did the current of discontent set in, that this faithful minister seeing little prospect of doing further good in the place, contemplated resignation; but he was anticipated in this step by a few leaders of intemperate zeal and exasperated passions, who convened the congregation, and having secured the appointment of a council obsequious to their views, determined to vent their revenge on their faithful pastor by giving him a summary dismissal. This disgraceful proceeding was carried into effect 22d June, 1750. Mr. Edwards bore the trial with admirable equanimity, and evinced his Christian temper by agreeing more than once to supply the vacant pulpit before his successor was appointed. This generous conduct, instead of mollifying the popular feeling, was requited by a vote of the inhabitants prohibiting his return. But he was amply compensated for this bitter hostility of a proud and worldly community, by the expressions of Christian sympathy that came from various parts of the church, and the liberal contributions that were sent from Britain, and particularly from Scotland, to relieve his destitution. Mr. Edwards now directed his energies into other channels, and afterwards laboured for six years as missionary to the Housatonic Indians at Stockbridge in Berkshire county, where he employed his summers during the absence of the tribes on their hunting excursions in the composition of theological works, which spread his fame throughout the world. In January 1758 he was reluctantly prevailed on to accept the presidency of the college of New Jersey; but before he had fully commenced his duties he was, owing to the prevalence of the small-pox in that place, advised to undergo inoculation; the experiment, how-

ever, at his age, being in his fifty-fourth year, proved too violent for his constitution; the remedy superinduced a most malignant form of the disease, and he was cut off on 22d March, 1758. He was a voluminous writer, his works comprising eight volumes. His essay on the 'Freedom of the Will,' his treatises on 'Original Sin' and on the 'Affections,' and his 'History of Redemption,' are generally known and highly valued. [R.J.]

 ELDON, JOHN SCOTT, earl of, a distinguished judge, was born at Newcastle in 1751. He was the eleventh of fifteen children. His father, who was a coal-fitter, and who possessed some of the careful qualities of his distinguished son, gradually amassed a considerable fortune, which enabled him to bring up and educate his large family respectably.

[Grammar School at Newcastle.]

John became a remarkable instance of the high success which may be obtained in England by the honest devotion of talents, though not brilliant, to one absorbing occupation; for though he received an Oxford education, he was totally destitute of literary taste, and never could compose a good English sentence—a peculiarity in which he differed much from his accomplished brother, Lord Stowell. Sir Samuel Romilly mentions how painful he felt it to

be obliged to confess to the Lord Chancellor his total inability to understand the meaning of some clauses of a bill drawn by his Lordship, on which his opinion was desired. On the 18th of November, 1772, he committed the sole rash act of his life in eloping with Elizabeth, the daughter of Mr. Aubone Surtees, the banker; and the young lady, contrary to the usual experience of such matches, found in him a constant, kind, and affectionate husband. He was called to the bar on 19th February, 1776. Some years elapsed before he had an opportunity of showing his abilities. It is a frequent anecdote about great barristers that they have owed their success to suddenly undertaking a case in which the originally retained counsel is taken ill or breaks his engagement, and such an incident in 1780 really was the foundation of Scott's business. In June, 1788, he was made solicitor-general, and in February, 1793, attorney-general. He was subject to much unpopularity as the adviser and conductor of the ineffective prosecutions for treason at that exciting juncture. In 1799 he was made chief justice of the Common Pleas, and became all the more admirable a common law judge that he could not give way to the doubting propensity which beset him on the woolsack. In 1801 he became lord chancellor, and with the short interval of the Fox and Grenville administration, in 1806-7, he held that office until the accession of Lord Lyndhurst in 1827. His hesitation and procrastination became proverbial; but it must ever be admitted that it arose from a conscientious desire never to leave the slightest particular of any of the complex cases before him unexamined and unweighed. He was a bigotted admirer of the law, of which he was so consummate a master. Projects of law reform cut him to the soul, and he has been represented as shedding tears on the abolition of the punishment of death for stealing five shillings in a dwelling-house. He died on 13th January, 1838. [J.H.B.]

ELIZABETH, the *first* of the name, queen consort of England, daughter of Sir R. Woodville and widow of Sir John Gray, mar. to Edward IV. 1464, died 1488; the *second* of the name, daughter of the preceding, wife of Henry VII., and mother of Henry VIII., 1466-1502; the *third* of the name,—

ELIZABETH, queen of England, was born at Greenwich on 7th September, 1533. She was the daughter of Henry VIII. by Anne Boleyn, and her position in reference to the descent of the throne was peculiar, since the accession of her sister, Mary, conveying the inference that Henry's marriage to Catharine of Arragon was valid, rendered the issue of the second marriage illegitimate. An act had, however, been passed in Henry's reign, which, fortunately perhaps, cut the knot by settling the crown on the two princesses successively. During the reign of her brother, King Edward, she spent a very happy life, following her natural disposition for hard study, and not only acquiring many accomplishments, but practically applying them to the acquisition of a profound knowledge of mankind. During the reign of her sister the scene changed, and she underwent five uneasy years of difficulty and danger. Her conduct was marked by extreme sagacity, courage, and caution. She proved that her adherence to the principles of the reformation was not so much in her mind a matter of essential belief as of preference between a good system and a bad system, for she submitted in some measure to the ritual of Rome. On the other hand, when we know the extreme rigidity of Mary's bigotry, it is necessary to believe that nothing but a considerable amount of sisterly affection could have prevented her from sacrificing one who was likely so far to undo all that she had herself done at the sacrifice of so many lives. Queen Elizabeth's accession to the throne dates from 17th November, 1558. Her glorious reign is matter of history. A contrast to that which followed, it was marked alike by prudence and decision. The ecclesiastical revolution, which every one saw must follow her accession, went on so gradually, and at the same time so distinctly, that the Romish hierarchy had abandoned their cause before it was finally decided against them. A main character of her reign is, that from the first she chose wise advisers, and through all her personal caprices kept them to the end. Another eminent feature of her policy was to watch the growth of discontents, and appease them ere they became dangerous. Thus, when such complaints as shook the throne in the next reign, and overturned it in that of Charles, began faintly to appear, she stepped forward and redressed the grievances as from her own princely beneficence to her suppliant people, and hence she preserved her prerogative unfurnished, while she appeased discontent. How far sovereigns of such ability are advantageous to a free country may be questioned. England certainly never came so near arbitrary power as in her reign. With all her political capacity, her per-

ELI

sonal failings were signally preposterous. Her desire to be considered lovely and to be loved approached a monomania. She appears to have had a singularly unpleasing aspect for a woman—harsh features, a rough yellow skin, dim eyes, an irascible indented mouth, and sandy hair—yet no one could too grossly flatter her beauty, and it was impossible to make a portrait with the slightest degree of truth which she could tolerate. Sir Walter Raleigh speaks of 'the pictures of Queen Elizabeth, made by unskilful and common painters, which, by her own commandment, were knocked in pieces and cast into the fire.' On more than one occasion she was allowed, and allowed herself, to exult in the notion that she was the object of the despairing love of her servants—but she never permitted either vanity or affection to disturb the policy of her reign. To the jealousy arising out of her peculiar weakness we may attribute the great blot on her name—her harshness to Mary of Scotland. It has now been proved that she distinctly indicated how good a service she would count it secretly to put the captive out of the way; and it is creditable to the English public men of the day that none of them would take her hint as a warrant 'to break into the bloody house of life.' Elizabeth died on 24th March, 1603. [J.H.B.]

ELLA, a Saxon chief who made a descent upon Britain, and became king of Sussex 491, died 514.

ELLA, a king of Deira, Northumb., 559-588.

ELLENBOROUGH, EDWARD LAW, Lord, an eminent English lawyer and judge, was born at Great Salkeld, in Cumberland, about the year 1748. As the son of the celebrated bishop of Carlisle, he began life with favourable prospects. He had not become conspicuously known to the public until the trial of Warren Hastings, in 1785, opened up for him a very great arena of exertion. His function of leading counsel for the accused in a matter involving so much variety and extent of new and perplexing matter was one which no man could perform in a satisfactory manner without great ability, and Law received for himself the high confidence of the public and his profession. He was made attorney-general in 1801, and lord chief justice of the King's Bench in 1802. He held the office for sixteen years, which covered a very trying period; and though he was a man of hasty temper, and sometimes deemed arbitrary, he obtained a character for fairness and independence. The last important business in which he was engaged was the trial of William Hone, charged with libel. The proceedings assumed an almost controversial character between the accused and the judge, and it was said that the mortification of the latter in being defeated by the verdict of a jury hastened his end. He died in December, 1818. [J.H.B.]

ELLIOT, W., a designer and engrav., 1717-66.

ELLIOTT, EBENEZER, the celebrated 'Corn Law Rhymers' was born at Masborough, near Rotherham, 1781, of humble parentage, and died at his residence near Barnsley, 1849. He was possessed of an athletic genius, and of that love of nature which marks the genuine poet. It is well known that his 'Corn Law Rhymes' assisted in exciting that revolt of the manufacturing population against a shameful impost, which produced our recent commercial changes;

but the name of Elliott will be remembered as the teacher and friend of the poor long after these circumstances have become matter of dry history. His 'Village Patriarch,' 'Ribbledin,' and other outpourings of his muse must always occupy a distinguished place in the popular poetry of England. Elliott possessed the happy talent of combining business with literature, and realized a competency in the iron trade.

ELLIS, JOHN, celebrated as a naturalist, was born in London about the year 1710. He died in 1776. Ellis was a merchant in London, but it appears he was not successful in business. The study of natural history, which had been an amusement in his earlier years, became in his distresses a consolation to him, and a serious occupation; while a situation under government rendered him in the latter period of his life comfortable and independent. He is the author of several valuable papers on subjects connected with natural history, both botanical and zoological; but his chief claim to the great reputation he enjoys rests upon his works on corallines. A little previous to his time Peyssonell had made known to the French Academy his discovery of the animal origin of corals and madreporae, while Bernard de Jussieu had demonstrated the animal nature of several corallines. Ellis, perhaps without knowing these discoveries, had his attention directed to the same subject, and succeeded in demonstrating clearly and satisfactorily the animality of an immense number of zoophytes, which, till his time, had been always classed amongst plants. His opinions were disputed, and the controversies arising therefrom gave Ellis further opportunities of more decidedly proving the truth of his discoveries. He is thus justly entitled to the credit of at least substantiating the fact that corallines are animals. His 'Essay Towards a Natural History of Corallines' was translated almost immediately into French and German, and procured for him the friendship and correspondence of Linnæus, who dedicated to him a genus of plants by the name of *Ellisia*. ELLISTON, ROBERT WILLIAM, one of the most versatile of British actors, was born in London, 1774, and was educated for the church, but disappointed his friends, and appeared on the stage in 1796. In 1803 he was appointed acting manager at the Haymarket, and his popularity was so great, that the performance was removed to the Opera House. His subsequent career as lessee and manager of various theatres, was marked by utter recklessness, not to say insanity on some occasions. His greatest character was that of Duke Aranza in 'The Honeymoon.' Died on the 7th July, 1831.

EMMETT. ROBERT EMMETT, the son of a physician at Cork, was born in 1780. While quite a lad he took an active part in the efforts made by the association called the United Irishmen, to separate Ireland from Great Britain, and establish her as an independent republic in 1798. When these attempts failed, Robert Emmett escaped to France, where he remained till the winter of 1802. He then returned to Dublin, and strove to reorganize the Irish malcontents, and renew the rebellion. On the 23d of July, 1803, a rising in Dublin took place at Emmett's directions; but the insurgent mob of the Irish capital proved as cowardly as they were furious; and Emmett, in disgust at the outrages which they committed, and finding himself utterly unable to rule the storm that he had raised, escaped from the rabble rout and the troops, who, after some strange delay, appeared, and more easily put them down. Emmett remained for a short time concealed among the Wicklow mountains; but, returning to Dublin was tracked, apprehended, tried, and convicted of high treason. He was executed on the 20th September, 1803. He met his fate with manly courage and Christian resignation; and his whole demeanour, both at his trial and on the scaffold, gained for him the pitying admiration of many, who, while they condemned his erroneous theories, and his mischievously rash enthusiasm, felt compelled to pay homage to the purity of his motives, the fervour of his eloquence, and the excellence of his general character. His fate, and that of Miss Curran, the lady to whom he was engaged, form the subjects of two of the finest and most popular of Moore's Irish melodies. [E.S.C.]

ENGEL, JOHN JAMES, a German philosopher, dramatic writer, and literary *savant*, professor of morals and liter. at Berlin, 1741-1802. His brother, CH. CHRISTIAN, a man of letters, 1752-1801.

ENGEL, SAM., a Swiss geographer, 1702-84.

ENGELBERT, a theologian of Styria, d. 1331.

ENGELBRECHT, JOHN, a German visionary, was born at Brunswick 1599, and died in his native place, after wandering from city to city, in 1642. His father was a tailor, and John was ap-

prenticed to the same business, but his health failed him, his malady being augmented by the severity of his religious practices, and he assumed the character of a prophet as early as 1622. There can be no doubt about the reality of his trances, and also that he possessed the extraordinary faculty of going without food or drink for many days together, and of sleeping for almost incredible periods. The 'Works, and Divine Visions, and Revelations, of John Engelbrecht,' were first published in German in 1625. The 'Visions' were translated into English by the learned Francis Okeley in 1780. The most striking of these is a vision of the three states, the ecclesiastical, the civil, and the economical: besides which he describes a 'Vision of Heaven and Hell,' a 'Vision of the New Heaven and the New Earth,' and 'Of the Mountain of Salvation.' The vision of the 'Three States' is evidently symbolic, and more independent of Engelbrecht's idiosyncrasy than the others, which take their colour from his preconceived notions. His appeals to the moral and religious sense of his readers are energetic, and carry along with them the fullest evidence of their sincerity. His grand mistake is that into which Quakers and enthusiasts of all classes have betrayed themselves—the supposition that their glimpses of spiritual things are necessarily an inspiration of the Holy Spirit. Okeley's edition of Engelbrecht contains a notice of John William Francis Petersen, and his wife Joanna Eleanora de Merlan, both famous visionaries, and a specification of Engelbrecht's works in the complete German edition of 1761. ENTRECASTEAUX, **JO. ANT. BRUNE**, D', admiral of the French fleets in the East Indies, was born at Aix, in Provence, 1740. In 1791 he was sent out by France in search of La Perouse; and, the nature of the inquiry leading him to keep near shore, he ascertained with great exactness the outlines of many coasts. New Holland, W. and S.W. coasts, Tasmania, New Caledonia, &c., have been accurately delineated by him. He failed in detecting any trace of the celebrated navigator, and died before returning home, in the vicinity of Java,

1793. Rossel, who succeeded him in command, has written an account of the voyage, 2 vols. 4to, 1808. [J.B.]

EOGAN, **EOGHAINN**, **EOGHANN**, or **EOAN**, names which figure in the old Irish annals as the half-fabulous stock of the houses of O'Brien, MacCarthy, O'Neil, and O'Donnell, reaching as far back as the 3d century B.C. The chiefs of the last two were created peers of Ireland in the reign of James I., the first with the title of earl of Tyrone, the second as earl of Tyrconnel.

EON, a French visionary of the 12th century, who believed himself to be meant by the accusative in the liturgical phrase *Per eum qui venturus est judicare*, &c., and professed to have visions and perform miracles in proof of his mission. He gained many proselytes, and gave them new names, such as 'Wisdom,' 'Terror,' 'Judgment,' and others equally striking. Eon died in prison about 1148, and his followers were consigned to the flames.

EPAMINONDAS, the Theban statesman and general, was of noble descent, but was born and reared in poverty. Of his early life little is known beyond the fact that he was educated in, and adopted the doctrines of Pythagoras; his public life extends from the restoration of democracy by Pelopidas and the other Theban exiles in B.C. 379, to the battle of Mantinea in B.C. 362. In the conspiracy which restored the independence of his native city he took no part, refusing to stain his hands with the blood of his countrymen; but no sooner were the usurpers expelled than he became the prime mover in the Theban state, and claimed for Thebes the right of controlling the other cities of Bœotia. Impressed with these opinions he went to Sparta as ambassador in B.C. 371, to negotiate peace; and his claim being rejected by the Spartans, Cleombrotus was sent to invade Bœotia. The contending parties met at Leuctra, B.C. 371, when the total defeat of the Spartans not only established the supremacy of the Thebans, but put an end to the superiority in arms which had been conceded to their opponents. Having thus succeeded in the first object of his ambition, he next conceived the design of substituting Thebes for Sparta as the ruling democratical state in Greece, and for this purpose marched an army into the Peloponnesus in the winter of B.C. 369, when he inflicted a serious blow on the power of Sparta. A second expedition into the Peloponnesus in B.C. 368 proving unsuccessful, Epaminondas was disgraced; and for some time his name does not appear in connection with any public measure. In a third expedition which he conducted in B.C. 366, he greatly extended the influence of Thebes, gaining over to her interests, without bloodshed, the whole democratic confederation in the Peloponnesus. Our limits prevent us from entering into the reasons which led to the downfall of the Theban influence. Achaia, Elis, and great part of Arcadia, returned to the alliance with Sparta; and it was to check this defection

that Epaminondas invaded the Peloponnesus for the fourth and last time in B.C. 362. The Spartans, along with the disaffected states, and aided by the Athenians, were prepared for the contest. The two armies met near Mantinea, a city of Arcadia; and in the battle which ensued, Epaminondas displayed with consummate skill the peculiar tactics to which he owed his celebrity; but when in the full career of victory, he received a mortal wound, and was carried from the field. His army was thereby paralyzed, and no further attempt was made to follow up the victory. His private life was free from reproach; and his public conduct was regulated by a sincere love of his country. Before Epaminondas was born, says Nepos, and after his death, Thebes was always subject to some foreign power; on the contrary, while he presided over her councils, she was at the head of Greece. EPICHRMUS, a Pythagorean philosopher and poet, an. of treatises on philosophy and medicine, and the supposed inventor of comedy, 5th ct. B.C.

EPICETUS, lived about 90 years after Christ. He is essentially the moralist of Rome—a Stoic; for Stoicism is simply the Roman character and genius represented in theory. The original monuments of his doctrine have mostly perished.

EPICURUS, born at Athens 341 B.C.: he flourished after the decline of Speculative Philosophy, and when the irretrievable disruption of national affairs in Greece had repressed the Heroic in Action. At such a time, he taught with acceptance that pleasure is the sole good, and that other aims are only the disturbances of humanity. The theoretical opinions of Epicurus were identical with those of all modern sensational Schools. We do not refer to his physical or cosmogonic speculations, which in the main he borrowed from Democritus; but to his conception of the origin and ground of human knowledge and thought. Human knowledge, he said, flows from our sensations, which *alone* do not deceive; beyond the immediate results of sensation, we are conscious of what he termed 'anticipations,' meaning thereby simple generalizations, or classifications of our sensible experience:—to such, add our 'passions,' or desire of pleasure and aversion from pain; and the contents of the human mind are summed up. From a philosophy of this character, no other system of practical morals than that inculcated by Epicurus ever can arise. If the existence of universal and necessary Ideas be ignored, an *imperative* in morals cannot be conceived of, nor will the name Duty have any meaning. *Right* denied, as an independent reality or a Law by itself, there is nothing for it as a rule of action, save the estimate of *consequences*; and the only criterion by which we can value or measure consequences is their tendency to produce pleasure or pain. The fundamental problem in Morals thus corresponds with the specu-

lative problem whether the human mind is capable of apprehending the Absolute and Imperative, or whether knowledge is simply empirical: nevertheless among empirical systems there is also a great variety. Granting that pleasure is the aim of action, it remains to determine wherein man's true pleasure consists? The actual scheme of Epicurus is certainly not the lowest of which we have record; but it would be wrong to pretend that it is a very elevated one. His maxims may be thus rendered:—Accept and aim at any pleasure which will not be followed by any pain. Avoid pain that brings no pleasure. Avoid every pleasure that would deprive you of a greater pleasure, or cause a pain greater than the pleasure. Accept any pain that might free you from a greater pain, or that must be followed by a pleasure more intense than the pain. The 'virtue' *par excellence* in such a system is *prudence*; but it admits of others; and Epicurus inculcated temperance, courage, energy to resist superstition and imaginary terrors, and justice—on the ground that honesty is the best policy. He was himself temperate and benevolent; disinterestedness seemed one of his necessities; he lived on water and crust, and in the midst of a fearful famine, he divided with his disciples his mite. He renounced what is ordinarily called pleasure, because its enjoyments could not last; not like Zeno, who repudiated it as evil, and incompatible with the freedom of the sage. We have only a few fragments of the writings of Epicurus; but his system is explained by Cicero, Seneca, Plutarch, and many others: Diogenes Laertius discourses concerning it very copiously. Like Democritus, Epicurus owes much to the immortal song of Lucretius. [J.P.N.]

EPIMENIDES, a philosopher and poet of the 6th century B.C., supposed to be the first who introduced the consecration of temples, the purification of countries, cities, and private houses, into Greece, where he was held for an infallible prophet.

EPINAY, MADAME DE LA LIVE D', or by her maiden name, LOUISE FLORENCE PETRONILLE, a French lady, celebrated for her attachment to Rousseau, and as the authoress of 'Les Conversations d'Emilie,' &c., 1725-1783.

EPIPHANIUS, one of the Greek fathers, d. 403.

EPIPHANIUS, surnamed 'The Scholastic,' Latin translator of Socrates, Sozomen, and Theodoret, 6th century.

EPISCOPIUS, SIMON, whose surname in his own tongue was Bisschop, was born at Amsterdam in 1583. Sent to the university of Leyden in 1600, his inquisitive and ardent mind soon involved him in the raging controversies of the time. Ordained a pastor at Bleswyck in 1610, he was in a very short time chosen to be the advocate of the Arminian party, at a conference which was held at the Hague, and was at length raised to the chair of theology at Leyden, on the deposition of Vorstius. At the synod of Dort he was the accredited champion of the Remonstrants, or Arminians. The victorious Calvinist, or Gomarist party, disgraced their cause by inflicting civil pains and penalties on their opponents. Episcopus was deposed and banished. The exile spent a short time in France, then returning to Holland he became pastor of the church of the Remonstrants at Rotterdam, and removed finally to the rectorship of the Arminian

mnasium at Amsterdam, where he died in 1543. Episcopius was the divine of the Arminian party; reducing to a system the scattered views and unadjusted conceptions of his master Arminius. His writings display no common shrewdness, versatility, and eloquence; the product of an adventurous and active spirit, that had a specialish in questioning ancient dogmas and unsettling common belief. His power lay, however, more in assault than defence; he could sap and mine with fully more dexterity than he could erect new and symmetrical edifice. His life was written by Limborch, a relative, and his theological works were collected by Curcellaeus and Poellening, in two folios, and published at Amsterdam 1550-65, and reprinted at London 1678. ERASISTRATUS, a Gr. physician, 4th c. B. C.

ERASMUS, an illegitimate son of Gerard, a citizen of Tergou, was born at Rotterdam 28th Oct., 1467. His paternal name he changed into *Désiré*,

amiable, and afterwards prolonged into *Desirius* Erasmus—the first a Latin, and the second

Greek appellation, both with the same meaning

the Dutch Gerard. He usually signed himself

Erasmus Roterodamus. He received his first edu-

cation at Davenport, where the future Pope Adrian

was his schoolfellow. But Erasmus was only

thirteen years of age when both his parents died,

and the three guardians to whose care the orphan

was left, squandered his property, and to gain the

whole of his patrimony, as well as to conceal their

illany, forced him into a monastery at Balduc, in

Brabant. Thence he was taken to another religious

house near Delft, and he assumed the vows at Stein

in 1486, having entered among the regular canons.

Unluckily for the young scholar he was not buried

in a convent, as his Latin scholarship gained him

the notice of Henry a Bergues, bishop of Cambrai,

who kept him for a time as his private secretary,

and then sent him to Paris to prosecute his studies.

At the French capital the young literary Dutchman

was in abject poverty, teaching a few pupils for

hire, nay for years he wandered about the contin-

ent and in England, subsisting on the precarious

bounty of admirers. He visited this country

for the first time in 1497, at the invitation of Lord

Mountjoy, and won the esteem of its most illus-

trious men, such as Sir Thomas More, Dean Colet,

Macnace, Grocyn, and others, and published his

Foris Encomium,—*Praise of Folly*. In 1506 he

travelled into Italy, took a doctor's degree at

Perugia, obtained from Pope Julian II. a final release

from his monastic vows, and joyfully put on the

black tunic of the seculars. He spent some time

at Bologna, and resided for a short season at Venice

with the renowned printer Aldus Manutius, and pub-

lished his *Adagia*. At the invitation of Henry VIII.,

in 1510, he revisited England, and taught in Cam-

bridge as a lecturer on Greek, and as Lady Mar-

garet professor of theology. But his itinerations were not over, for in 1514 he returned to the continent; and at the archbucal request of him who was afterwards Charles V., he repaired as counsellor to Brabant. After several changes he removed to Basel in 1521, the scene of his highest literary labours, in conjunction with the printer Froben. In 1529, when the reformation triumphed in Basel, the timid satirist of monks and popish ceremonies took refuge in Freiburg; but in 1535 he returned. His health was now declining; gout and gravel had for some years severely tormented him; his feeble frame was seized with dysentery, and he died at Basel on the 12th of July, 1536.—The literary toils of Erasmus were incessant. Besides his invaluable labours in connection with the revival of learning, his most popular efforts were his satirical assaults on the monastic orders, in his famous 'Colloquies,' and other productions. But his great work was the publication of the Greek Testament, out of various manuscripts, in 1516, folio, accompanied with a new Latin translation. The Testament was reprinted in 1519, 1522, 1527, and 1535. In the first year mentioned he also published the works of Jerome. He composed likewise a series of paraphrases on the New Testament, many of which display an admirable talent for exegesis. In his various prefaces and dedications, he nobly, eloquently, and repeatedly vindicated the open circulation of the inspired volume in the vernacular languages of Europe. These publications raised up hosts of enemies to him, who called him heresiarch and forger, and he shrunk from suffering on account of protestant truth and freedom. With Luther, whom he at first eulogized, he maintained a bitter and protracted controversy about the 'Freedom of the Will.' That his writings largely contributed to the success of the reformation there is not a doubt, though himself wanted the faith and courage to be a thorough reformer. His scholarship was extensive and elegant, his industry was unceasing, his Latinity is generally pure, his wit was ever sparkling in pleasant variety, his company was a scene of refined enjoyment, his fund of anecdote was inexhaustible, and the love of literature was the passion of his nature. Latin was more familiar to him than his mother tongue. Among his works, not already referred to, are his learned dissertation, *De recta Latini Græcique Sermonis pronuntiatione*, his 'Letters,' full of interesting information; his treatise, *De Copia Verborum et Rerum*, in which he insists on diversity of illustration and style; his *Ciceronianus*, in which he heartily ridicules such pedants as would not use a Latin term unless it had the sanction of the great Roman orator; his *Christian Soldier's Manual*; and his *Ecclesiastes*, or the Art of Preaching, published not long before his death. The best edition of his collected works is in 11 volumes folio, Leyden, 1703-6. The first edition, in 9 volumes, Basel, 1540, was condemned to the flames by Pope Paul IV. [J.E.]

ERASTUS, THOMAS, a physician of Baden, better known in ecclesiastical history for his opinions in theology and church government, the fundamental principle of which is, that the church should exercise no coercive power except through the arm of the civil magistrate. The Erastians in the Long Parliament were opposed to the presbyterians; and in the Church of England, Bishop

Parker may be considered the chief of this school. Erastus was born in 1524, and d. in Basle, 1583.

ERATOSTHENES, an astronomer of Alexandria; died 194 B.C. He is distinguished in history for having first conceived the plan of measuring the earth. The means employed were the shadow of a style at Alexandria, and the distance of Alexandria from Syene, where the sun is vertical at solstice. His result was surprisingly near the truth, making a degree to be about 80 English miles: it is about 69.

ERBACH, CHR., a Ger. composer, 16th cent.

ERCHEMBERT, a Lombard historian, 9th c.

ERCILLA-Y-ZUNIGA, DON ALONSO DE, a gallant soldier in the service of Philip II., distinguished in the wars of Spanish America, where his experience furnished the materials for the earliest epic poem of his native country, entitled 'La Araucana,' by which he is best known in France and England; born 1525, died 1595.

ERDESWICKE, T., an Engl. antiqu., d 1603.

EREMITA, D., a Flemish *savant*, 1584-1613.

ERIC. The Swedish kings of this name of whom anything is known are—ERIC EDMUNDSON, Upsala king, died 885. ERIC THE VICTORIOUS, son of the preceding, and joint successor with his brother Olave; celebrated for his victory over Styrbjorn, son of the latter, who claimed the inheritance on his father's death; died 993, or soon after. Two kings, both bearing the name of ERIC, contended for the throne in the civil war which broke out about 1066, and in this war both the kings and all the chief Swedes are said to have fallen. Besides these, four other Erics must have been known traditionally.—ST. ERIC, who reigned 1155-1169, being called ERIC IX. After him comes ERIC CANUTESON, or ERIC X., grandson of the preceding, called the good-harvest king, reigned 1210-1216. ERIC ERICSON, or ERIC XI., a grave and righteous prince, in whom the race of St. Eric expired, reigned 1222-1250. ERIC XII., of the house of the Folkungers, who rose to power during the reign of the preceding; king during the lifetime of his father, Magnus Ladislas, and at length poisoned by his mother, Blanche of Namur, 1350-1359. ERIC XIII. of Sweden, and VII. of Denmark, before his election, duke of Pomerania, chosen in Sweden 1396; co-regent with Margaret of Waldemar to his dethronement by Engelbrecht-Engelbrechtson in 1434, and after that, having been again acknowledged, dethroned in all the three kingdoms of Sweden, Norway, and Denmark, at the death of that princess, 1439. ERIC XIV., son of Gustavus Vasa, born 1533, succeeded 1560, compelled to abdicate by his brothers 1569, poisoned in prison 1577.

ERIC. The kings of Denmark of this name are nine in number—two unknown in the 9th century, and then ERIC I., called 'the Good,' reigned 1095-1105. ERIC II., reigned 1134-1137. ERIC III., called 'the Lamb,' succeeded the preceding, and abdicated 1147. ERIC IV., appointed by his brother, Abel, reigned 1242-1250. ERIC V., succeeded 1259, assassinated 1286. ERIC VI., reigned 1286-1319. ERIC VII., same as ERIC XIII. of Sweden.

ERIC AXELSON, adminis. of Sweden, 1466-7.

ERICEIRA, FERDINAND DE MENEZES, Count De, a soldier, statesman, and historian of Portugal, 1614-1699. His grandson, FRANCIS XAVIER,

distinguished by his military talents and his learning, author of 'The Henriqueida,' a poem, 1673-1743. The mother of the preceding, JANE JOSEPHINE DE MENEZES, distinguished for her literary works, died 1709.

ERIGENA, JOHN SCOTUS, who seems from his surname to have been a native of Ireland and not of Scotland, was born about the beginning of the ninth century. He is often confounded with a Saxon monk whom King Alfred invited to England, and placed over his college at Oxford. Erigena spent the most of his time in France, and at the court of Charles the Bold. About the year 850 he wrote against Gottschalk on predestination; and he also published a work on the Lord's Supper, *de Corpore et Sanguine Domini*, in which he combated the doctrine of transubstantiation. His theological writings were condemned by the council of Valence in 855, and that of Tangres in 859. But the great work of this schoolman is that named *de Divisione Naturæ*, &c., printed at Oxford by Thomas Gale in 1681. It is divided into five books, and is composed in the form of a dialogue. This vast and amazing essay treats of a great variety of subjects—of God, and the knowledge of God—of being, and its kinds and modes—of the world, of sin and its nature, &c.—in which abstruse and subtle discussions, a species of mystical pantheism, may be easily discovered. Erigena was well versed in Greek, and was deeply imbued with Neo-platonism,—with those ideas and modes of thought which are associated with the names of Plotinus and Proclus. Hebrew and Arabic he had also acquired in his travels. Few, if any of his contemporaries, could match this remarkable man either in genius or acquirements, in dialectics or sentiment, in intellectual acumen or in stores of erudition. His popularity was greater two centuries after his death, than during his life. The pseudo-Dionysian writings were translated by him, and these contributed also to mould the literature of these mediæval times. Various portions of his works have been discovered and published at different times by Duange, Mabillon, Angelo Mai, and MM. Ravaisson and Cousin. The influence which 'this meteor of the 9th century' exercised on his own and succeeding ages by his profound and daring speculations in philosophy and theology was immense. He is supposed to have died in France about the year 875. [J.E.]

ERINNA, a Greek poetess, date unknown.

ERIZZO, SEBASTIANO, a Venetian senator and antic., author of a work on numismatics, 1525-61.

ERMENGARDE, daughter of Louis II., kg. of Italy, wife of Boson I. 877, regent of Arles from 888.

ERMERIC, or HERMENRIC, k. of the Swedes in Spain in the reign of Honorius, 409, died 440.

ERNEST, duke of Saxe-Gotha, distinguished for his zeal in astronomy, and for his practical knowledge of that science, 1741-1804.

ERNESTI, JOHN AUGUSTUS, a celebrated German critic, professor of literature and theology at Leipzig, author of a great number of philological, critical, and theological writings, editor of Home and other classics, &c., 1707-1781. AUGUSTUS WILLIAM, his nephew, also a distinguished *savant* 1733-1801. JOHN CHRISTOPHER THEOPHILUS, another nephew, brother of the preceding, prof. of philosophy, editor of Greek classics, &c., 1756-1802.

ERNST, H., a German *savant*, 1603-1665.
 ERNSTING, C., a Germ. botanist, 1709-1768.

 destroyed the temple of Diana at Ephesus, 356 B.C.
 ERSCH, JOHN S., a German bibl., 1766-1828.
 ERSKINE, DAVID, Lord Dun, an eminent
 Scottish lawyer, and mem. of parlia., 1670-1755.
 ERSKINE, HENRY, a presbyterian divine, suf-
 fered imprisonment under the Act of Uniformity,
 and finally minister of Churnside in Berwick,
 124-1696.
 EBENEZER, his son, founder of the
 Free Church of Scotland, 1680-1754. RALPH,
 other son, and seceder along with his brother,
 author of Sermons, &c., 1685-1752.
 ERSKINE, JOHN, a Scottish theol., 1721-1803.
 ERSKINE, JOHN, baron of Dun, a descendant
 of the earls of Mar, dist. as a reformer, 1508-91.
 ERSKINE, THOMAS, Baron, a lawyer and dis-
 tinguished orator, the youngest son of David, earl
 of Buchan, was born about the year 1748. He
 belonged to a family of which some members were
 remarkable for their genius, others for their folly,
 and he seemed in himself to be a union of these
 qualities. He studied at the High School of Edin-
 burgh, and the University of St. Andrew's, enter-
 ing successively the navy and army, before, from
 his influence not explained, he began to study
 law. In his earlier years he acquired a meteoric
 reputation as a brilliant and fascinating master of
 trivial conversation. He was called to the bar
 in 1778. One of his earliest cases involved an ex-
 cuse in that fertile field of political abuses, the
 Admiralty, when it was shown that landsmen
 were rated to seamen's pensions for electioneering
 purposes. He at once rushed into full practice,
 and was employed in every case where a brilliant
 nunciatory oratory—of which he was an unrivalled
 master—was desired. In 1783 he entered
 the House of Commons in Fox's interest, but the
 dry style of his oratory—so captivating to a
 jury or on the hustings—failed to please that fas-
 cinating audience. He was counsel in many his-
 torical cases, and performed heroically that duty
 the advocate which prompts him to shrink from
 anything, which, however much it may compromise
 his own taste, interest, or safety, appears likely to
 benefit the cause intrusted to him. His eminence
 as an advocate made it necessary that he should
 be appointed Lord Chancellor in the short accession
 of 1806 of the Fox and Grenville ministry. The
 evidence of the selection was much doubted; and
 was not fortunate for its object, since he had ac-
 cumulated no wealth to support his position as a
 peer. The strange eccentricities of his latter years,
 entering deeply into his domestic affairs, and mak-
 ing them matter of unpleasant notoriety, would
 have rendered his claims embarrassing had he seen
 his friends again in power. He died on the 17th
 November, 1823. [J.H.B.]
 ERXLEBEN, DOROTHY CHRISTINA LEOPOLDINE,
 a dame, a lady who took a doctor's degree at the

 D', a celebrated court intrigante, mistress of
 Francis I., 1508-1576.
 ESTE, an illustrious house of Italy, from which
 the house of Brunswick is derived, and which
 owes its origin to the Carlovingian era, at the
 beginning of the 9th century. The most celebrated
 names are—ALBERT AZZO D'ESTE, the first who
 possessed the city of that name, 1020-1117. OBIZZO,
 first marquis of Este, lord of Padua in 1182, and
 afterwards marquis of Milan and Genoa. His son,
 AZZO V., who by his marriage acquired the sove-
 reignty of Ferrara, and became chief of the Guelfs
 of Venice, died 1192. AZZO VI., son of the pre-
 ceding, lord of Ferrara and Verona, died 1264.
 HERCULES I., lord of Ferrara and Modena, whose
 court was graced by Ariosto, Boiardo, the Strozzi,
 &c., 1471-1505. His son, ALPHONSO, married to
 Lucretia Borgia 1502, a party to the league of
 Cambray, reigned 1505-1534. HIPPLYTUS,
 brother of Alphonso, and cardinal of Este, a patron
 of letters, partizan of Louis XII., and historian of
 the war of the French against the Venetians,
 1479-1520. ALPHONSO II., grandson of the first
 of that name, duke of Ferrara and Modena, dis-
 tinguished as a patron of arts and letters, 1533-
 1597. CÆSAR, an illegitimate descendant of
 Alphonso I., reigned at Modena 1597-1628.

RENAUD, a partizan of Austria in the war of succession, and duke of Modena, 1655-1737. HERCULES III., grandson of Renaud, and, like him, duke of Modena, was the last of this house in Italy, and his estates passed to Austria, by the marriage of his daughter with the archduke Ferdinand, 1727-1797.

ESTERHAZY, a noble family of Hungary, the best known of whom are—PAUL IV., ESTERHAZY DE GALANTHA, a general and literary *savant*, 1635-1713. His grandson, NICHOLAS JOSEPH, a great patron of arts and music, founder of the school in which Haydn and Pleyel, among others, were formed, 1714-1790. NICHOLAS, PRINCE D'ESTERHAZY DE GALANTHA, dist. as a field-marshal and foreign ambassador, 1765-1833.

ESTHER, queen of Persia, 6th century B.C.

ESTIUS, W., a Dutch theologian, 1542-1613.

ESTREES, an ancient and noble house of France, the best known of which are—JEAN D'ESTREES, an artillery officer distinguished at the taking of Calais, 1480-1571. His son, ANTHONY, the defender of Noyon, and governor of the Isle of France, 1593. GABRIELLE, the daughter of Anthony, duchess of Beaufort, and mistress of Henry IV., supposed to have been poisoned, 1571-1599. Her brother, F. ANNIBAL, duke and marshal, author of the 'Memoirs of the Regency of Marie De Medicis,' 1573-1670. His son, JEAN, vice-admiral and Comte D'Estrees, appointed viceroy of America, 1624-1707. CÆSAR, brother of Jean, a cardinal and negotiator, 1628-1714. JEAN, nephew of the preceding, foreign ambassador, 1666-1718. VICTOR MARIE, Duc D'Estrees, son of the vice-admiral Jean, a distinguished naval commander, 1660-1737. LOUIS CÆSAR LETELLIER, Comte D'Estrees, a commander of the German army, when he defeated Cumberland, and marshal of France, 1695-1771.

ETH, a king of Scotland, deposed 875.

ETHELBALD, a k. of Mercia, reigned 716-55.

ETHELBALD, the third Saxon k. of England, has the character of a profligate prince, 857-860.

ETHELBERT, a k. of Kent, reigned 560-616.

ETHELBERT, the fourth Saxon k. of England, son of Ethelwolf and brother of Ethelbald, 860-866.

ETHELFLEDA, or ELFLEDA, daughter of Alfred the Great, and wife of Ethelred, count of Mercia, died 922.

ETHELFRID, or ADELFRID, king of Northumberland, killed in battle, 593-617.

ETHELRED I., fifth Saxon king of England, predecessor of Alfred the Great, 866-871.

ETHELRED II., son of Edgar and Elfrida, suc. Edward the Martyr as k. of England, 978, d. 1016.

ETHELWOLF, the second Saxon king of England, son of Egbert, whom he succeeded in 838, and father of Ethelbald, died 857.

ETHEREDGE, SIR GEORGE, an English dramatist and song-writer, 17th century.

ETOILE, PIERRE DE L', a French chancery officer, whose journal has supplied much curious matter to the historian, under the reigns of Henry III. and Henry IV., 1540-1611. His son, CLAUDE, a dramatic writer, 1597-1652.

ETTMULLER, MICH., a Ger. phys., 1644-88.

ETTMULLER, M. ERNEST, son of the preceding, author of various memoirs, and editor of his father's writings, 1673-1732.

ETTY, WILLIAM, R.A., was born at York, March 10, 1787. His father was a miller. In 1798 he was apprenticed to a letterpress printer at Hull, but having served his time, forsook the mechanical art of printing for the more exciting profession of a painter. Etty commenced this hazardous enterprise in London, in 1805, when he entered as a student of the Royal Academy, and became also, through the liberality of an uncle, a private pupil of Sir Thomas Lawrence's for twelve months, but received very little attention from him. For long his pictures were rejected both at the Royal Academy and the British Gallery, but after about fifteen years' toil his fortunes changed, he received gradually more of the public attention, and in 1822 was enabled to visit Italy, where he found in Venice the chief attractions; he returned with many studies to London in 1824, and exhibited his picture of Pandora in 1825, for which he was chosen an associate of the academy, and he was elected an academicien in 1827. Etty died at his native place, November 13, 1849, in his sixty-third year, leaving a considerable fortune. He was in every respect one of the most distinguished painters of the English school, but especially excellent as a colourist; some of his pictures rival Titian's, or any of the great Venetians, as gorgeous displays of colour. His great powers were well displayed in the comprehensive exhibition of his works at the Society of Arts, Adelphi, in 1849, the summer only before his death. In this exhibition were many admirable pictures, including the nine great works, the triumph of Etty's life and ambition, as admitted by himself in his autobiography, published in the 'Art Journal' of 1849. He explains these pictures as follows:—'My aim in all my great pictures has been to paint some great moral on the heart.' 'The Combat,' *the beauty of mercy*; the three 'Judith' pictures, *patriotism*, and self-devotion to country, people, and God; 'Benaiab David's chief captain,' *valour*; 'Ulysses and the Syrens,' the importance of resisting *sensual delight*.—or an Homeric paraphrase on 'The Wages of Sin is Death'; the three pictures of 'Joan of Arc, religion, loyalty, and patriotism, like the modern Judith. In all nine great pictures, 'As it was my desire to paint three times three.' [R.N.W.]

EUBULIDES, a philosopher of Miletus, best known for the captious arguments and insoluble questions with which he endeavoured to embarrass the empirics, but especially Aristotle; he was the disciple and successor of Euclid, and is said to have instructed Demosthenes; born about 360 B.C.

EUBULUS, a Greek comic poet, 370 B.C.

EUCLID, a mathematic. of Alexandria, who flourished 300 B.C. No name of antiquity is better known. His digest of geometrical propositions is a schoolbook still. His works have been often edited and republished. Barrow's edition is very valuable; but the best known in this country is that by Robert Simson.

EUCLIDES, the first archon of Athens, B.C. 408.

EUCLIDES, a disciple of Socrates, and founder of the philosophic sect of Megara, by which the art of dialectic was carried to high perfection was living about 390 B.C.

EUDEMON, J. A., a learned Greek, d. 1625.

EUDES, duke of Aquitaine, reigned 688-735.

EUDES, duke of Burgundy; the *first* of the

me reigned 1078-1103; the *second*, 1142-1162; the *third*, 1192-1218; the *fourth*, 1315-1349.

EUDES, or ODON, king of France, 887-898.

EUDES, JOHN, a mystic writer, born 1601.

EUDOCIA, the name adopted on her conversion to Christianity by Athenais, the daughter of Pontius, a philosopher of Athens, and wife of the emperor Theodosius the younger; she was celebrated for her learning and magnificence, and was divorced in consequence of aspiring to the government; died in religious retirement at Jerusalem about 460.

EUDOXIA, daughter of the preceding, and wife of the emperor Valentinian III., and of Maximus.

EUDOXIUS, an heretical writer of the 4th ct.

EUDOXUS, a Gr. astronomer, lived abt. 370 B.C.

EUGENE, FRANCIS, of Savoy-Carignan, commonly called Prince Eugene, grandson of Christian II., duke of Savoy, and son of Eugene Maurice, count of Soissons, distinguished as a generalissimo of the imperial armies, and as a companion-in-arms of Marlborough, 1663-1736.

EUGENIUS, a Rom. emp., elected and slain 394.

EUGENIUS, ST., a bp. of Carthage, 481, d. 505.

EUGENIUS, the *first* of the name pope of Rome 4-657; the *second*, 824-827; the *third*, 1145-53; the *fourth*, 1431-1447.

EUGENIUS, the *first* of the name king of Scotland, date unknown; the *second*, 427-449; the *third*, reigned 535-557; the *fourth*, 605-620; the *fifth*, died 692; the *sixth*, reigned 692-694; the *seventh*, 704-721; the *eighth*, 761-764.

EUGENIUS, an astronomer and bishop of Toledo, died 636; another of the same name, distinguished as 'the younger,' known as a theological writer and poet, and bp. of Toledo, died 660.

EUGENIUS BULGARIS, a Greek prelate, for his philos. and math. writings, 1716-1806.

EULER, LEONARD, born at Bâle 1707, died at St. Petersburg 1783: one of the greatest analysts of the last century,—not indeed ranking with Descartes, Newton, or Leibnitz, but by the unbroken record of the world of science, claiming equality with Daniel Bernouilli and D'Alembert. A bare catalogue of the immense labours and voluminous writings of this illustrious person would occupy more than our space: it may, indeed, be said of him, *nil tetigit quod non ornavit*; and his eager genius, his untiring industry, and exhaustless resources, carried him through all the sphere of mathematical and physical science. Living immediately after the discovery of the infinitesimal calculus, no man did more to unfold its powers and simplify its methods; his great works on that subject are still models of composition: and amid what sprung from his abundant, his amazing fertility, the *varia* are found of the most important of subsequent advances: his work on 'Isoperimeters,' may be said to have provoked the calculus of variations of Lagrange. With Bernouilli, Euler divided several prizes: these two great men ran a strikingly corresponding race. The work by which he is popularly known is his 'Letters to a German Princess,' a work instinct with acuteness, and evincing marvellous powers of exposition, but the whole, perhaps, his only failure. He repeatedly tries in it to break a lance with Leibnitz, offering a refutation of the scheme of monads. It betrays, however, no sufficient comprehension of the meaning of this chief of German thinkers;

nor in the case of Euler did destiny add to his ability as an analyst, the powers which constitute the metaphysician. [J.P.N.]

EUMENES, one of Alexander's lieutenants, a sharer in the divided empire after his death, conquered and put to death by Antigonos, B.C. 316.

EUMENES, the *first* of the name king of Pergamos, 263-241 B.C.; the *second*, 198-157 B.C.; the *third*, an infant son of the preceding, d. 158.

EUMENES, a rhetorician of Gaul, 261-311.

EUNAPIUS, a celebrated sophist, historian, and physician of Sardis, in the 4th cent., au. of 'Lives of the Sophists,' and a history of his own times.

EUPHORION, a Gr. poet and hist., 3d c. B.C.

EUPHRANOR a Greek painter and sculptor, 4th century, B.C.

EUPHRATES, a Stoic philosopher, 2d cent.

EUPHRATES, founder of the Ophites, 2d cent.

EUPOLIO, an Athenian poet, kn. abt. 435 B.C.

EURIC or EVRIC, k. of the Visigoths, 466-84.

EURIPIDES, the last of the three great Greek tragedians, was the son of Mnesarchus and Clito, and was born in Salamis, whither his parents had retired during the occupation of Attica by Xerxes, on the very day of the glorious victory near that island, B.C. 480. That his father was a man of property is proved by the expensive education which Euripides received; but it appears from the sarcastic insinuations of Aristophanes that his mother was of humble descent. Euripides listened to the lectures of the first philosophers of the day, studying physics under Anaxagoras, and rhetoric under Prodicus; and having on both occasions Pericles as his fellow-disciple. With Socrates he was on terms of the closest intimacy. Nor were the ornamental parts of his education neglected; he was so well versed in gymnastic exercises that he gained two victories in the Eleusinian and Thesean athletic games when only seventeen years old; and seems also to have cultivated a natural taste for painting. Some specimens of his skill in the latter art were preserved for many years at Megara. He is said to have attempted dramatic composition at an early age, and brought out his first tragedy in B.C. 455, when he was in his twenty-fifth year. On this occasion he gained the third prize; but fourteen years after, in B.C. 441, he gained the first prize, and also in B.C. 428. According to Suidas he gained five victories, one of which was with a posthumous play. His reputation now spread far and wide; and if the narrative of Plutarch is to be trusted, some of the Athenian soldiers who survived the disastrous termination of the expedition against Syracuse, were treated with kindness, and even set at liberty, for reciting such passages from his works as they happened to recollect, B.C. 413. Euripides continued to exhibit plays till B.C. 408, soon after which he retired into Magnesia, and thence into Macedonia, to the court of Archelaus, by whom he was received with distinguished honours. As in the case of Æschylus, the reasons for this self-imposed exile are obscure and uncertain. Report alleges that he was unhappy in his own family; and the envy and jealousy excited by his literary reputation drew upon him the taunts and sarcasms of his political enemy Aristophanes. His intimacy with Socrates and Alcibiades likewise contributed towards rendering him unpopular; and it may

therefore be inferred that prudence dictated his withdrawal from a country where his avowed sentiments exposed him to danger. In Macedonia he continued to write some plays, one of which he inscribed with the name of his patron. Euripides died B.C. 406, at the age of seventy-five, and was buried at Pella. His countrymen in vain entreated Archelaus to send his remains to Athens, where, however, they erected a cenotaph to his memory. In the estimation of the ancients, Euripides held a rank much inferior to *Æschylus* and *Sophocles*. With him the dignified simplicity of the ancient tragedy disappears, and its place is supplied by rhetorical declamations, subtle disputations, and appeals to the sympathetic feelings. His works were held in especial favour during the middle ages; and hence his remaining plays more than outnumber the extant dramas of both *Æschylus* and *Sophocles*. According to some authorities, Euripides wrote 92 tragedies, according to others 75. Of these 19 are extant, besides numerous fragments of the plays which have been lost. [G.F.]

EUSDEN, LAURENCE, an obscure poetical wr. who in 1718 obtained the laureateship, d. 1730.

EUSEBIUS, a pope, elected and died 810.

EUSEBIUS, bishop of Dorylæum in Phrygia, celebrated for his opposition to the Eutychian heresy, 5th century.

EUSEBIUS OF NICOMEDIA, an Arian prelate, and determined enemy of Athanasius, died 342.

EUSEBIUS, PAMPHILI (that is, the friend of Pamphilus), was born at Cesarea, about the year 270. Pamphilus was his earliest friend in Cesarea, and gave the young student access to the large library which he had collected. Pamphilus was at length imprisoned, and Eusebius remained his attached and inseparable companion. And when the prisoner suffered martyrdom under Galerius, in 309, Eusebius fled first to Tyre, and then to Egypt. On his return, about 314, he was made bishop of his native city, and continued in that diocese till his death. In the year 325 he attended the council of Nice, and delivered a formal address to the emperor. The Nicene creed which condemned Arianism was in its earliest draught composed by him; but he scrupled at length to subscribe it, after several important verbal alterations had been made upon it. His caution and moderation afterwards subjected him to the charge of that very heresy which the Nicene council had been summoned to confute. His views on the Trinity approached those of Origen, and he seems to have held a species of subordination among the persons of the Godhead, which was incompatible with a consistent belief in the supreme deity of the Son. At the council of Tyre, in 335, he joined in deposing Athanasius on a charge of contumacy. Prior to this period, in 330, he was offered the patriarchate of Antioch, but refused it; and he died about the year 340. Eusebius was a divine of great learning, accomplishments, and industry. Not a few of his numerous works have been preserved, which have been of great service to theology, especially to church history. His *Præparatio Evangelica*, in fifteen books, was, as its title implies, intended to prepare the pagan mind for the reception of Christianity, by showing the vast inferiority of other religions; and his *Demonstratio Evangelica*, in twenty books, of which ten have been preserved, was meant for the Jewish

mind, and as a positive evidence for Christianity, especially in its connection with the oracles and prophecies of the Old Testament. His *Historia Ecclesiastica*, in ten books, reaches from the birth of Christ to the defeat of Licinius in 324, and is an important and valuable record. Besides his *Life of Constantine*, his *Oration* in praise of the same emperor, his *Onomasticon*, his tract against Hierocles, and his *Eloge* on the martyrs, we have his *Chronicon*, a Latin version of the second part of which by Jerome, has been long known. But an Armenian version of the whole work was found some years ago, and published at Venice, in 1818: other discoveries have been made by the famous Angelo Mai. The *Theophania*, another treatise of Eusebius, was discovered in a Syrian version, by Mr. Tattam in an Egyptian monastery, and has been translated into English, and published by the late learned Professor Lee of Cambridge. EUSEBIUS OF VERCELLI, a partizan of Athanasius, and determined enemy of the Arians, d. 372.

EUSTACHIUS, BARTHOLOMEW, a distinguished Italian anatomist who flourished in the sixteenth century, but of whose personal history very little is known. Neither the date nor the place of his birth have been accurately ascertained but it is generally believed that he died in 1570 perhaps at Rome. He was the most eminent anatomist of his time, and Haller says of him that he enriched the science with more discoveries than any other person whom he knew. His anatomical plates, thirty-nine in number, were unpublished at his death, and were supposed to be lost, but they were discovered at Urbino in 1712, and were published in 1714, by Lancisi, physician to Pope Clement XI., and are still much esteemed. His name is preserved in that of the Eustachian tube which he discovered, and which runs between the inner ear and the upper part of the throat; and the Eustachian valve of the heart, which separates the right auricle from the inferior vena cava. [J.M'C.]

EVEILLON, JAS., a French ecclesiastical writer, dist. for his learning and benevolence, 1572-1651.

EVELYN, JOHN, one of the finest examples that our history presents of the accomplished and well-principled English gentleman, was born in 1620, at his father's seat of Wotton in Surrey. After having been educated at Oxford, he served as a volunteer in the Low Countries; and during the period of the civil wars he remained abroad, studying men and manners, statistics and science, the fine arts and polite literature. In 1652 he returned to England, and took up his residence at Sayes Court beside Deptford, which had recently come into his possession by marriage. His royalist opinions kept him in retirement till the restoration; after which he took an honourable but not conspicuous part in public business, returning always to those quiet pursuits and speculations in which his happiness consisted. He died in 1706, a few years after having become owner of his paternal estate by the death of his elder brother. He was one of the original members of the Royal Society, and a frequent contributor to its transactions. He wrote separate treatises on engraving, architecture, and numismatics; but the most valuable work he published was his 'Sylva, or a Discourse on Forest Trees,' in which, and in smaller pieces, there is given, in an agreeable and lively style, much of curious information and of ingenious theory in regard to the writer's favourite pursuits, planting and gardening. His 'Diary,' which was not published till 1818, is both interesting as a literary performance, and exceedingly useful for the knowledge it conveys of the times in which Evelyn lived. [W.S.]

EXMOUTH. EDWARD PELLEW, afterwards Lord Exmouth, was born 19th April, 1757, at Dover. His father was captain of the Post Office Packet on that station, and died early, leaving young Edward and five other children almost without friends or support. Edward Pellew entered the royal navy, and soon attracted notice by his extraordinary activity and courage. He served on board the *Blonde* off the American coast in 1776 and 1777, and in the last mentioned year he was with a party of seamen attached to Burgoyne's expedition from Lake Champlain to Saratoga. Young Pellew distinguished himself amid the disasters of this campaign by his indomitable spirit and alacrity. He was promoted on his return to England; and when the war of the French revolution began, Captain Pellew was appointed to the *Nymphæ* frigate. In command of this vessel he captured the French frigate *Cleopatra*, after one of the best fought actions of the war. He commanded next the *Arethusa*, and in her he captured another French frigate, *La Pomone*, in 1794. He continued to do good service and to rise in rank during the war; and he frequently signalized his remarkable personal strength and activity in saving the lives of others at sea and in shipwreck. In 1816 he was an admiral in command of our Mediterranean squadron, and a peer by the title of Lord Exmouth. In the spring of this year he was ordered to repress the piracies of the Barbary states of the Mediterranean, to obtain the release of the numerous Christian slaves who were sold in captivity at Algiers, Tunis, and Tripoli, and to bind these powers by express treaty to discontinue for the future their practice of carrying off Christians into slavery. The deys of Tunis and Tripoli consented; but the Algerines, confident in the strength of their fortification, and proud of their old piratical renown, refused. Exmouth gave them a speedy repetition of the lesson which Blake had given to their ancestors; and it was this time still more sternly taught. On the 27th of August, 1816, the English fleet of five sail of the line, five frigates, four bomb vessels, and five gun brigs, anchored off Algiers: aided by a Dutch squadron of five frigates

and a corvette under Admiral Von Capelbar, which joined Lord Exmouth in the common cause of civilization and humanity against barbarian violence and cruelty. Terms were offered to the Algerines, but haughtily rejected. At half-past two the Christian fleet took its station close to the fortification; the batteries of the Mahometans then commenced their fire, which was promptly answered by the British broadsides. For upwards of six hours a cannonade raged from sea to shore, and from shore to sea, which for obstinacy and destructiveness can hardly be paralleled in naval warfare. Nearly 1,000 officers and men were killed and wounded on board the English and Dutch ships, and at least 7,000 of the Algerines were computed to have fallen. The sea-ward batteries of the town, the mole, and the harbour walls, and the arsenals, were laid in ruins. Great numbers of the houses were destroyed; and nine Algerine frigates, and a whole flotilla of smaller piratical vessels, were burnt or sunk. On the morrow Lord Exmouth prepared to renew the attack, but the dey now accepted the terms which he had previously scoffed at; and peace was granted to Algiers on condition of her abolishing for ever the enslaving of Christians, the instant delivery of the slaves of all Christian nations, and ample reparation and apology for the outrages and insults which the dey had offered to British subjects and the British flag. In pursuance of this treaty Lord Exmouth had the truly noble happiness of receiving on board of his fleet, three days after the battle, 1,083 fellow-Christians who had been groaning in slavery under Algerine masters. They were safely conveyed by the British fleet to their respective homes, and diffused through Christendom the just renown of England and her victorious admiral.—Lord Exmouth died on 23d January, 1832. He was a good as well as a great man; and he gave on a deathbed of painful and lingering illness, even a brighter example of Christian heroism than he had displayed on the quarter-deck in the hour of his brightest earthly glory. EYCK, HUBERT and JOHN VAN, two celebrated painters of Bruges of great importance in the history of art in Europe, owing to their substitution of *varnish* painting with oil, in the place of the old ordinary *tempera* painting with water.—HUBERT VAN EYCK, so called, it has been supposed, from Eyck (or Alden Eyck) the place of his birth on the Maas, was born in 1366, and appears to have been the real inventor of the new process of painting, which was discovered about

1410, when his brother John Van Eyck may have been about fifteen or twenty years of age only; they were then settled at Bruges, and they formed a great school there.—The masterpiece of the Van Eycks is the altar-piece of the 'Adoration of the Lamb' in the church of St. Bavon, Ghent; this celebrated picture was finished by John in 1432, Hubert, who had executed the large figures of the upper part, had died at Ghent six years before, on 18th September, 1426. On the inscription on the picture the chief merit is properly given to Hubert, 'the greatest in art'; John is merely mentioned as the completer of his brother's work: some portions of the picture are in the gallery at Berlin.—JOHN VAN EYCK was born about 1390-6, and died at Bruges in July 1441, as recently ascertained from documents by the Abbé Carton (*Les trois Frères Van Eyck, &c.*, Bruges, 1848). 1420 is the earliest date of any of his known pictures, and all the historic facts seem to show that John, so far from being the founder of the school of Bruges, was the pupil of his brother in common with several other early Flemish masters, though John's services to art were so great in many respects that he may well be considered as the head of the school.—The invention of the Van Eycks is commonly called oil painting, but colours were mixed with oil long before this time, though pictures were not painted in this manner, but Vasari expressly explains that the Van Eyck method was *varnish* painting—oil with other mixtures, and it arose in the search for a good varnish for tempera pictures.—This method was carried into Italy by Antonello of Messina, who having seen a picture by John Van Eyck in the collection of Alphonso, king of Naples, about the year 1443, set off for Bruges in order to learn the new method; though he arrived some time after the death of Van Eyck, he contrived to acquire the method from some of his pupils, or the third brother, LAMBERT VAN EYCK, and was thus the cause of oil painting gradually superseding fresco painting some years afterwards in Italy, first in Venice, then in Florence.—MARGARET VAN EYCK, the sister of these three brothers, likewise painted. There are two pictures by John Van Eyck in the National Gallery. [R.N.W.]

FABRE D’EGLANTINE, PHILIPPE FRANCES NAZARE, the son of a bourgeois, born at Limoux, 1759, was a dramatic author and pamphleteer, and acquired a celebrated name in the course of the French revolution as a confederate of the Jacobins. With the advantage of fine talents, and a literary education received in the college of the doctrinaires, he united all the vices of a young man upon town, his conversational and musical abilities rendering him a highly agreeable, not a very edifying companion. His short political history is soon written. On the 10th August, 1792, his notoriety as a pamphleteer procured his nomination as a member of the provisional commune at Paris, and he was afterwards appointed secretary-general in the ministry of justice under Danton. He was one of the members for Paris in the national convention, where he voted for the king’s death and other extreme measures, though he had the honour at last of suffering for his moderation under the ascendancy of Robespierre. He was arrested by the decree of St. Just, which included Camille Desmoulins, Herault, Danton, Philippeaux, and Lacroix, on a charge of complicity with D’Orleans and Dumouriez, to restore the monarchy, and was executed with Robespierre and Bazire, 5th April, 1794. His real crime, like that of his companions in misfortune, was the desire to return to moderate counsels, for though he was weak, inconstant, and ambitious, he was neither treacherous nor cruel. Fabre d’Eglantine was accomplished in nearly all the fine arts, but only cultivated them for the sake of shining in society. He furnished the poetical

nomenclature of the republican calendar, the mathematical portion of which was contrived by Romme. [E.R.]

FABRE DE LAUDE, JEAN PIERRE, born 1755, and distinguished as an economist, was acting as advocate to the parliament of Toulouse when the French revolution broke out, the principles of which he adopted, so far as to secure his continuance in various government employments, until proscribed by the reign of terror. After the fall of Robespierre he was returned to the council of 500 (1796), and was successively a member of the tribunate (1801), president of the commission of finances (1804), senator (1807), and afterwards a count of the empire. His political alliances were purely circumstantial, for though he voted against the return of Napoleon to power in 1814, he appeared in the chamber of peers during the hundred days of the year following, and at length served the state under the Bourbons. He is the author of some works of temporary interest, upon impost and political questions. [E.R.]

FABRE DE L’HERAULT, DENIS, first an advocate of Montpellier, and afterwards a member of the French national convention, where he was rather useful than eloquent, has acquired a name in the history of the period by his career in the war of the republic against Spain. He was sent to the army of the eastern Pyrenees as commissary after the fall of the Girondins, and displayed great courage, but so little prudential conduct that the French forces were routed in action, and their discipline reduced to anarchy. Fabre de L’Herault was killed in an attempt to rally the troops at Port Vendres, 20th December, 1793, and had a place decreed to him in the pantheon of French worthies, while the generals Daoust and Delâtre, of the same force, were executed on the imputation of treason in the same series of events. FABRICIUS, JEAN CHRETIEN, a celebrated entomologist, was born at Tundern, in the duchy of Sleswick, in 1742. He died in 1807. He was sent to the university of Upsal, where he studied under Linnæus, and became one of his most attached and eminent pupils. Under such a teacher he obtained a very considerable knowledge in botany and most of the other branches of natural history. Having one day dissected the organs of the mouth of a cockchafer, he conceived the idea of using the organs of mastication as the means of producing a classification of insects. He was appointed soon after this professor of natural history at the university of Kiel, and from that time he devoted himself almost entirely to the study of entomology. In 1775 he published his 'Systema Entomologiæ,' in which he laid before the world his new mode of arrangement; and for the remainder of his life he continued in successive publications to evolve his system with much ability. His systematic arrangement has been followed by few, but his mode of distinguishing the genera is still retained by entomologists. Fabricius possessed a great knowledge of languages; and he travelled over most of the countries of Europe in search of new insects, and for the purpose of examining the museums of the different towns he visited. He made frequent journeys to England, where he made the acquaintance and friendship of Banks, John Hunter, Francillon, and most of the naturalists of repute living at that time. He was much esteemed for his amiability of disposition; and it is said, when he heard of the bombardment of Copenhagen by the English fleet a profound melancholy seized him, from which he never recovered. FAIRFAX, EDWARD, an English poet and translator of Tasso, son of Sir Thomas Fairfax of Denton in Yorkshire, and brother of Lord Fairfax, the subject of the following notice, whom he assisted in the management of his affairs. Besides his 'Tasso' and his own poems, which consist of twelve eclogues, he is the author of a prose treatise on witchcraft, and a history of the Black Prince, but the latter perished in MS. at the fire of Whitehall. He died in 1632, with the reputation of a gentleman and a scholar. His son WILLIAM is known for his translation of 'The Lives and Opinions of the most Celebrated Philosophers,' from the Greek of Diogenes Laertius. [E.R.]

FAIRFAX, FERDINAND, Lord, father of the celebrated general by Mary his wife, daughter of the earl of Musgrave, and himself a general in the parliamentary army, is memorable for his total rout by the earl of Newcastle, 30th June, 1643, and his subsequent successes in Yorkshire. His military history is closely connected with that of his son, who was for six years his companion-in-arms, and who succeeded to the title and estates, by the death of his father, in 1648. Lord Ferdinand Fairfax had received his commission as general of the parliamentary forces in the north, at the commencement of the civil war in 1642, when he found himself opposed to a confederacy of the neighbouring counties, united in a league for the king by the politic earl of Newcastle. This circumstance must account for his early reverses, for though he never acquired the same importance as his son, he was a general of great valour. [E.R.]

FAIRFAX, SIR THOMAS, afterwards Lord Fairfax, born at Denton, near Leeds, in 1608, was the son of Ferdinand Lord Fairfax. He was educated at St. John's College, Cambridge, and served while a very young man under Lord Vere in the English auxiliary army in the Low Countries. On his return to England he married, and lived for some years in the country, a silent but stern observer of the follies and oppressions of King Charles's government. The Fairfaxes were zealous presbyterians; and, when the troubles of the nation broke out into civil war, they were active in arming their tenantry and maintaining the cause of the parliament against the royalists in Yorkshire and the neighbouring counties. Lord Ferdinand Fairfax was made general of the parliamentary armies in the north, and Sir Thomas was general of the horse under him. The Fairfaxes sustained several reverses in the beginning of the war; but Sir Thomas kept the field with indomitable spirit, and gradually raised the discipline and courage, as well as the numbers of his troops.

1644 he was one of the commanders on the parliamentary side in the great battle of Marston Moor, which destroyed the royalist force in the north of England. When the parliamentary army was new-modelled, Fairfax was appointed generalissimo, and Cromwell for his lieutenant-general. On the 19th of June, 1645, they fought and won the decisive battle of Naseby. Fairfax then conquered the king's strongholds in the west of England, and before the close of 1646 the war was ended.—In the strange series of intrigues and *coup-de-mains* which now ensued, and which led to the trial and execution of the king, and the elevation of Cromwell to supreme power, Fairfax was a mere instrument in the hands of more subtle and resolute men. He was only fit for the field; and the adroitness and steadiness for which he was pre-eminent as a soldier, utterly deserted him when he was required to act as a statesman. Clarendon says truly of him, 'Fairfax wished for nothing at Cromwell did, and yet contributed to bring it all to pass.' After the king's death Fairfax resigned his commission, and lived in retirement during the whole period of the commonwealth. He had inherited the family property and title on his father's death in 1647, and the management of his estates now became the whole employment of the late renowned generalissimo of the parliament's victorious armies. Cromwell treated him with contempt. After the great protector's death in 1658, it became speedily manifest how unequal Richard Cromwell was to the government which had been bequeathed to him; and men of all parties, except some of the more enthusiastic republicans, and a few of the army chiefs, looked to the recall of the old race of kings as the only means of securing peace and order. Fairfax took an important part in bringing about the restoration. While Monk was still in Scotland, Lord Fairfax collected forces in Yorkshire, and declared himself for a free parliament and the restoration of the monarchy. He refused, however, to take the chief command of the enterprise out of Monk's hands, and sought neither rank nor wealth for himself in doing what he believed to be his duty. He was one of the commissioners sent 18th May, 1660, to wait upon Charles II. at Breda, and he accompanied the restored sovereign at the ceremony of his coronation. He then retired again to his Yorkshire estates. Lord Fairfax died on the 2d November, 1671. [E.S.C.]

FANTIN-DESODOARTS, ANTOINE ETIENNE

NICOLAS, a voluminous author of history and jurisprudence, born in Dauphiné 1738, died in Paris 1820. M. Desodoarts made his debut as a

Jesuit, and bore the title of Vicar-General of Embrun, but appears not to have exercised its functions. He became known at the dawn of the re-

volution as an advocate of the Jacobins, and has given his principles to the world, more especially,

in his work entitled 'Histoire Philosophique de la

Révolution de France depuis la Convocation des Notables jusque' à la Séparation de la Convention.' The critical account of his works in the 'Biographie des Contemporains,' would lead to the conclusion that he was an ardent imaginative writer, clear and elegant in the style of his narrative, but wanting in virtuous principle, and not reliable as an authority for the facts of contemporary history. He is one of numerous examples supplied by the period, demonstrating that the education of the church and the bar at that time, was sufficient to pervert the noblest talents, and prepare men to accept the vilest expedients in politics and morals in place of principle. FARDELLA, M. A., a Sicil. philos., 1650-1718.

FAREL, WILLIAM, a native of the French Alps, and one of the earliest converts of the reformed doctrines in Paris, is known as the pioneer of the reformation in Dauphiné and Switzerland. He was one of the most intrepid assailants of the Roman Catholic Church, and distinguished as a preacher rather than a writer. When addressing the agitated multitudes who listened to him, neither the clash of arms, the ringing of bells, nor the threats of his enemies, could stem the torrent of his eloquence. He was subject to much persecution, and escaped many dangers, dying in the seventy-sixth year of his age, in 1565.

FARINATO, P., an Italian painter, 1525-1606.

FARINELLI, named CARLO BROSCHI, one of the most extraordinary singers that ever lived, was born at Naples in 1705. In 1722 he was engaged at the Alberto Theatre of Rome, and while there contended with and overcame a famous performer on the trumpet. From Rome he went to Bologna, thence to Venice and Vienna, at which latter place he was received with especial honour by the emperor Charles VI. He came to England in 1734, and the effect of his singing is described as being something like enchantment. In 1737 he went to Spain, where he remained for twenty years, enjoying the friendship and confidence of two monarchs, Philip V. and Ferdinand VI., and having power almost equal to a prime minister. During his residence in Spain he had a pension for life settled upon him amounting to upwards of £2,000. There are many beautiful stories told of the goodness of heart and disinterestedness of Farinelli which it is impossible to introduce into this brief memoir. In 1759 Farinelli returned to Italy, and took up his final residence at Bologna. One of his biographers says, 'this extraordinary musician and blameless man died in the eightieth year of his age.' FAUCHER, CÉSAR and CONSTANTINE, twin brothers and soldiers, distinguished in the wars of the French revolution, born 1760, both shot 1815.

FAUCHET, CL., a French hist., 1529-1621.

FAUCHET, CLAUDE, a French priest, alike remarkable for his physical courage, and moral and intellectual intrepidity, was born at Dorne, in the department of the Nièvre, 1744, and was successively grand vicar of the archbishop of Bourges, preacher to the king, and 'abbé commandataire' of Montfort, before the revolution, and afterwards constitutional bishop of Calvados. He began his political career as a chief of the *Illuminati*, and a reformer of the church, on the principles of philo-

phy and national independence advocated in his work 'De la Religion Nationale,' published 1789. Rendered famous by his eloquence and his writings, he headed the deputation to De Launay, when the Bastille was besieged, and advanced word in hand in front of the combatants, whom, as is said, he rallied three times to the assault. It was Fauchet also who gave the sanction of a religious blessing to the national tricolor when first used, and advised the consolidation of the national guard under the command of Lafayette. As the revolution proceeded, he established a kind of political reunion in the vicinity of the Palais royal, and had Condorcet for one of his coadjutors, and a board of correspondence devoted to the propagation of the natural rights and duties of French citizens. As a member of the first parliament he opened the debate on religion by a bitter speech against the priesthood, and publicly stripped it of the insignia of his order. Notwithstanding his share in scenes that were worthier of the Parisian emagogue than the minister of religion, he bitterly lamented the king's death; and as an ally, both in the score of humanity, and on philosophical principles, with the Girondins, he shared their fate, being guillotined with the twenty-two on the 31st of October, 1793. The particular accusation against the Abbé Fauchet was his complicity with Charlotte Corday, he having introduced her to the sitting of the convention, on the day of her arrival in Paris, but this was only a pretence to disguise his hatred of the terrorists. He is the author of numerous orations published between 1774 and 1792, the most remarkable of which is his 'Sermon sur l'accord de la Religion et de la Liberté,' 1791. [E.R.]

FAUJAS DE ST. FOND, BARTHOLOMEW, a French naturalist, regarded as one of the founders of geological science, 1750-1819.

FAUST, JOHN, a German theologian, known as Dr. Faustus, and regarded as a magician from his being addicted to chemistry and astrology, &c. The legend of his compact with the devil, is the subject of Goethe's magnificent drama, and of a poem by Lessing, and other compositions of genius in the German language. Dr. Faustus lived at the beginning of the 15th century.

FELL, SAMUEL, dean of Christchurch, and vice-chancellor of the university of Oxford, distinguished, like his son Dr. John Fell, as a royalist. He is said to have died of a broken heart on hearing of the execution of Charles, 1594-1649.

FELLENBERG, PHILIPPE EMANUEL DE, a descendant, on his mother's side, from the famous Dutch admiral Van Tromp, was born at Berne, in Switzerland, 1771, and is celebrated as an agriculturist, and founder of an institute at Hoffwill for the theory and practice of agriculture, including manufactories of the instruments and machines, and a school of industry for the poor, on the general principles of Pestalozzi. M. de Fellenberg, like every other practical benefactor of his fellow-creatures, had much envious and ignorant opposition to overcome before he was allowed to pursue his benevolent plans without molestation: a government commission was named to inquire into the working of his institute, the result of which was his recognition as a man of the highest talents and public virtue. He is the author of several works on agriculture, and of memoirs on the institution at Hoffwill, published at the beginning of the present century. [E.R.]

FELTON, T. B., a French Jesuit, 1672-1759.

FENELON, FRANCIS DE SALIGNAC DE LA MOTTE, an eminent and pious Frenchman, was born in 1651 at the castle of Fenelon in Perigord. His studies were pursued successively at the universities of Cahors and Paris, and having directed his views steadily toward the church, he became qualified to obtain orders at the age of twenty-four. His first appointment was Superior of the newly converted female catholics, and the extraordinary success with which he discharged the duties of this station brought him under the notice of Louis XIV., who employed him on a special mission to convert the protestants of Poitou. Fenelon stipulated that no means of conversion were to be used but those of persuasion, and having obtained the royal sanction to this express condition, he accepted the embassy. In 1689 he was intrusted with a still more delicate and responsible office, that of undertaking the education of the duke of Burgundy and his younger brothers. It was for the benefit of his royal pupils that he wrote his *Telemachus*, and to reward the assiduity and faithfulness with which he discharged his duties as preceptor to the royal children, he was elevated to the archbishopric of Cambray. He had not been long, however, installed in that see, when espousing the cause of Madame Guyon, the famous pietist, whose principles were embodied in her book, the 'Maxims of the Saints,' he was rancorously attacked by Bossuet, his defence placed by the pope in the list of prohibited books, and he himself

summoned on pain of excommunication to renounce the heresy. He read his recantation in the pulpit of his own cathedral. But this was not the end of his trials. Bossuet, who had become his bitter enemy, incensed the mind of Louis XIV. against him, by alleging that '*Telemachus*,' which had been published through the perfidy of a secretary who had been employed in transcribing it, was a cover attack on the character of his government, his personal ambition, his love of glory, and his passion for the pursuit of war. Fenelon was in consequence banished from the court. But a high tribute was paid to his talents and worth by the foreign invaders, who by the express commands of the duke of Marlborough exempted his lands from pillage, while that general himself, and his allies, showed him every mark of courtesy. Fenelon, though he continued within the pale of the popish church, saw through it the corruptions and gross superstitions. He was a very pious man, and his grand habitual aim was to form his own character in conformity with the mind of Jesus Christ. He was temperate almost to abstemiousness, ate little, slept little, took no recreation except a few hours daily in the exercise of walking or riding, while all the rest of his time was devoted to the discharge of his duties in social intercourse with his friends, in visiting the poor in admonishing, reproving, or comforting his flock as circumstances demanded. The most of his revenues were devoted to benevolent purposes, to help in the education of poor clergymen, to assist indigent old gentlemen, and to extend the means of usefulness to the public hospitals. His death, which took place in the thirty-third year of his age, showed, by the universal regret it produced, how strong a hold he had taken of the hearts of his countrymen, while his literary works have erected a monument which will transmit his name with honour to a distant posterity. FERGUSON, **ROBT.**, an Engl. divine, d. 1714. **FERGUSON**, **WM.**, a Scotch painter, d. 1690. **FERGUSON**, **ROBERT**, a Scotch poet, whose compositions in the lowland Scotch dialect entitle him to rank with Burns in descriptive power, though nothing that he has written can be compared with the lyrics of the bard of Ayr for tenderness, and intense love of nature, was born at Edinburgh, where his father was accountant to the British Linen Company, 17th October, 1750. His parents intended him for the ministry, but he wanted the power of steady application to the necessary studies, and his father dying when he was seventeen years of age, he went to reside with an uncle near Aberdeen, who was at length tired of his poor relative, and allowed him to take the situation of copying-clerk at the office of the commissary-clerk, and afterwards in that of the sheriff's clerk, in his native city. His love of poetry, and his conversational powers, not only unfitted him for this drudgery, but the latter, by a natural reaction against his daily toils, involved him in habits of dissipation, which predisposed him to disease; and it is melancholy to relate that the last penalty which the violated laws of nature exacted from him was nothing less than his mental derangement. In 1774, when in the twenty-fourth year of his age, he was sent to a poor asylum for lunatics, where he was subject to rules which in all human probability hastened his death, which took place in about two months afterwards, on the 16th of October. Burns always acknowledged with affecting tenderness his obligations to Ferguson, whom he styles his 'elder brother in misfortune,' and to whose memory, in the year 1789, he erected a handsome monument in the Canongate churchyard, the place of his interment. It is impossible to read the Scottish poems of Ferguson without acknowledging how closely Burns has followed his model in some of his most admired descriptive pieces. We may instance in particular, 'The Daft Days,' 'The Rising of the Session,' 'Leith Races,' 'Elegy on John Hogg,' and 'Cauler Oysters,' in which the most striking parallels may be traced. Ferguson could sing his native melodies with effect, and was a little too fond perhaps of practical jests. It is said that he never made an enemy, but it is only too likely that he lost a friend in his rich uncle for lack of that ordinary 'prudence' which men of genius too often pride themselves in holding cheap. [E.R.] **FERHAD-PACHA**, grand vizier and minister of war to Amurath III., died in disgrace, 1594. **FERISHTAH**, **MOH.-CASSIM**, a Pers. hist., an. of a 'Hist. of India under the Mussulmans,' 17th c. **FERMAT**, **PIERRE**, an eminent French mathematician, born at Toulouse in 1595, died in 1667. Fermat was famed in his time as one of the most remarkable analysts in Europe; neither will any historian deny his genius, or his success; he is the author of much ingenious speculation; he discovered curious and recondite theorems regarding numbers; and invented a remarkable method for the solution of problems in *maxima* and *minima*. But a factitious interest has recently attached to him because of the singular claim instituted by La Place that Fermat be considered the true author of the Differential Calculus. It is not easy to conceive a stronger illustration of the sway of

national vainglory over the judgments even of great Frenchmen. The Differential Calculus, like most other new principles, especially demanded by the necessities of Science, was heralded by many partial and imperfect anticipations: anticipations always marked by one characteristic,—they effected the solution of particular problems by methods akin to those of the Differential Calculus; but of the generality, the true method of that remarkable branch of Analysis, they partook nothing. Fermat merely hit upon one such anticipation in his treatment of *maxima* and *minima*. The claim urged by La Place has led to a narrow scrutiny of the powers of this Geometrician, and they have not risen thereby in estimation. Many of his theorems regarding numbers seem lucky guesses on curious points, sought for systematically as such, rather than deductions by scientific procedures. [J.P.N.]

FICHTE, JOHANN GOTTLIEB, born in Upper
saxia, 19th May, 1762; died on 21st January,
1814. One of the most remarkable names in Philo-
sophy since the death of Kant. The character-
istics of his speculations are nearly the following.
Recognizing that Kant had given a full *critique* of
the action of the Mind, on the *substance* of its
thoughts, Fichte demanded a *critique* of the act of
thinking itself. What, he asked, is the content
of the act of consciousness? It reveals some-
thing that is *Me*, and something which I call *Not*
Me—how are these related,—what is this thing
feeling which I call *Not Me*? It is a *feeling*,
and can be nothing but a *feeling*: there is nothing
which we can be conscious except the *Me*,—the
inking principle and its modifications. What,
then, is the *Not Me*? Why is it thrown by us into
the form of an external or independent existence?
The Mind alone, indeed, is the sphere of the mind's
operations; but to its activity there are *limitations*;
it proceeds in the work of self-development by
steps; we are finite, and struggle towards the in-
finite by steps or degrees. Now the consciousness
of this *effort*, the feeling of *limitation*, seems like
the presence of an external obstacle; at least we
justify it, and term it the *Not Me*.—Adequate
proof is not here allowed for criticism on this
stem; nevertheless, two characteristics of it must
be remarked. (See articles HAMILTON, HEGEL,
SHELLING.) *First*, as a scheme of pure idealism
resembles Berkeley's; but the architecture of it
is different. Berkeley supposed that the ideas we
mistake for the external world, are visions of
something *Not Us*—glimpses of the Divine Intel-
ligence: Fichte, that they are nothing save the
Mind's own efforts. Hence he spoke of our con-
ceptions as *creations*; he deduced everything from
the Mind's *activity*. *Secondly*, the assertion of the
Mind's Freedom and independent Energy, is the
corner-stone of Fichte's whole system. However
useless his speculative philosophy, the tenacity with
which he clung to this prime element of Humanity,
led to the best results in morals and politics. No
man ever wrote whose pages burn more with what-
ever can stir up the highest in all of us. He was a
very apostle of the Heroic: his morals are the purest
Stoicism modified according to the acquisitions,
the culture, and necessities of this Age. And he lived
what he preached. His theoretic philosophy has already
departed; but the Man Fichte, will ever be cher-
ished as one of the noblest of his race. [J.P.N.]

[Birth-place of Fielding.]

FIELDING, HENRY, born in 1707, was the
third son of General Fielding, and great-grandson
of an earl of Denbigh. His classical education
was received at Eton; and he afterwards studied
law at Leyden, which, however, he was obliged to
leave in his twentieth year, on failing to receive
supplies from home. His father had a large
family, and appears to have been neither rich nor
frugal. The son was fairly left to shift for him-
self; and, seeking his fortune in London, he found,
as he says himself, that his choice lay between
being a hackney writer and a hackney coachman.
Composition for the stage was his first pursuit,
by which he contrived to lead the life of a gay
young man for about nine years, from 1727 to
1736. During this time he wrote eighteen plays
of one sort or another, which, though admitted to
be dramatic failures, show, in passages innumera-
ble, the same vigorous sense and shrewdness, the
same keenness of wit, and the same acuteness of
critical discernment, which afterwards character-
ized his novels. His translated farce of 'The
Miser,' and his 'Mock Doctor,' are now oftenest
remembered; but neither these, nor his other
comedies and farces, possess nearly so much
originality or spirit as his burlesque parodies on
the tragic drama, among which 'Tom Thumb' may
be noted as being still by far the best thing of the
kind in the English language. The audacity with
which in his farces he satirized public characters, is
said to have been the main provocation which led the
government to establish a censorship of acted plays.
In 1736 he married an amiable young lady, with
whom he received about £1,500, succeeding, about
the same time, to an estate of £200 a-year, in
Derbyshire. He now retired to the country,
where he lived with hospitable and careless extrava-
gance, and found himself penniless in the course
of three years.—He returned to London, resumed
his law studies, and was called to the bar. But
he had no success in the practice of his profession,
for which, besides other causes, he was now dis-
qualified by frequent attacks of gout. To the
anxieties and distresses of a precarious and scanty
livelihood, was soon added the deep grief caused
by the death of his wife, to whom, and to his chil-
dren, the good-hearted and improvident man of
pleasure was warmly attached. For ten years he

subsisted by miscellaneous literary drudgery. He made new attempts at dramatic writing; he published many fugitive essays and tracts, engaged in political controversy as an active Whig partizan, and was the conductor and chief writer of three successive periodical papers aimed at the Jacobites and their principles. About 1742 he wrote 'Joseph Andrews,' the first of those novels on which his fame depends. Notwithstanding its frequent seriousness, this piece was intended to be, and in many points really is, a parody on the sentimentalism of Richardson's 'Pamela.' It was followed by 'Jonathan Wild,' a singular specimen of very vigorous but overdrawn irony.—In 1749 he received from the government a small pension, and an appointment as a justice of peace for Middlesex and Westminster. The office, as then regarded and administered, was decidedly one which a gentleman would not have accepted unless through necessity; and it undoubtedly helped to degrade both Fielding's character and his feelings. Its duties, however, were discharged not only zealously, but with an honourable integrity and disinterestedness altogether new in the occupants of such places. He published an 'Inquiry into the Increase of Thieves and Robbers,' besides other treatises bearing on law; he was a remarkably efficient police magistrate; and one of his last achievements was the extirpating of several gangs of ruffians by whom London was infested.—'The History of Tom Jones, a Foundling,' was written very soon after Fielding had been forced to embark in these ungenial and harassing employments; when his health was already quite broken; and when, by his own public acknowledgment, the honesty with which he filled his office left him so poor that the benevolence of wealthy friends had been required for enabling him to subsist. It is not easy to understand the grounds on which 'Tom Jones' has been defended against the charge of immorality; but in point both of genius, and of skill in art, it is the best novel ever written. It was followed in 1751 by 'Amelia,' which is very much inferior. The heroine is said to have been designed as a portrait of the author's second wife. In 1752 he attempted a new periodical, which drew him into quarrels with Smollett and other men of letters. His life was fast ebbing away: dropsy had been followed by jaundice and asthma. Ordered by physicians to a southern climate, he sailed for Lisbon, and died there in October, 1754, in the forty-eighth year of his age. He left behind him, besides other works, a spiritedly written account of his 'Journey to Lisbon.' [W.S.]

FIENNES, WILLIAM, Lord Say and Sele, 'a grand rebel for twenty years' under Cromwell, afterwards lord privy seal and lord chancellor to Charles II., 1582-1662. His son, NATHANIEL, one of Cromwell's privy council, 1608-1669.

FIESCO, J. L., count of Lavagna, cel. for heading the conspiracy against Andrew Doria in 1547.

FIESOLE, FRA GIOVANNI DA, commonly called FRA ANGELICO, his family name was Guido, was born at Mugello in 1387; his surname

of Fiesole he acquired from the order of predicant at that place, whom he joined in 1409. He died in 1455.—Fra Angelico was distinguished for his pious life, and the same sentiment pervaded all his works: he was remarkably methodic in his habits; he commenced every picture with prayer, and invariably carried out the first impression, looking upon it as a species of inspiration. His principal works are some frescoes in the convent of San Marco at Florence, and others in the chapel of San Lorenzo in the Vatican. Some accurate engravings from these works are in course of publication by the Arundel Society; their chief merit is their refined sentiment and high order of expression, in which qualities Fra Giovanni was as good as the type of his successors, the model of the quattrocento school of painters; a school in some respects supposed to be revived in the recent much called preraphaelite innovation in our own school, but minute finish was an extremely rare characteristic of the genuine quattrocento masters of Italy.—[Vasari, *Vite de' Pittori*, &c.] [R.N.W.]

He was a niello engraver, and was in the habit of, says Vasari, taking sulphur impressions from his engravings, and printing with them on damp paper to see the effect of the design, when he discovered that though engraved he could take the same impressions from the metal itself. There is in the library at Paris a print representing the coronation of the Virgin, with the date 1452.

1450 according to Gaye, from a silver plate of Maso Finiquerra, still preserved in the collection of the grand duke of Tuscany. This is supposed to be the oldest metal plate print extant: there are wood block prints much older. FITZGERALD, EDW., Lord, son of the duke of Leinster, a political partizan and rebel in Ireland, born 1763, shot in the struggle for his arrest '98. His wife, LADY EDWARD FITZGERALD, commonly called PAMELA, was supposed to be the daughter of Madame de Genlis, by Philip Egalite, brother of the late king of the French, with whom she was educated at the Palais Royal. She died in indigent circumstances at Paris, 1831.

FITZGIBBON, JOHN, a disting. lawyer, earl of Clare, and lord chancellor of Ireland, 1749-1802.

FITZHERBERT, SIR A., a learned judge and writer on law, author of a 'Collection of Law Cases,' &c., died 1538. His grandson, NICHOLAS, proposed author of the 'Antiquity and Duration of the Roman Catholic Religion in England,' accidentally drowned 1612. SIR W. FITZHERBERT, a descendant of the same family, appointed gentleman-usher to the king, 1748-1791.

FITZHERBERT, MARIA ANNE, formerly Miss Smythe, married to George IV. 1787, died 1837.

FITZJAMES, JAMES, duke of Berwick, son of James II. and Arabella Churchill, sister to the duke of Marlborough, a distinguished commander in the French army, born 1670, killed at the siege of Philipsburgh 1794. His second son, and almoner of Louis XV., and bishop of Soissons, 1709-1764. His son, CHARLES, a peer and marshal of France, 1712-1787. His great grandson, EDWARD, duke of Fitzjames, an adherent of the French court, died 1839.

FITZSIMONS, H., an Irish Jesuit, 1569-1644.

FITZSTEPHEN, W., an Eng. historian, 12th c.

FITZWILLIAM, WM., earl of Southampton, a royal commander, dist. against France, d. 1542.

FITZWILLIAM, THE RIGHT HON. WM. WENTWORTH FITZWILLIAM, fourth earl, a Whig statesman of the period of the French revolution, afterwards associated with the duke of Portland and Pitt, and after the death of the latter in 1806 president of the council in the Grenville ministry, 1748-1833.

FIXMILNER, P., an Aust. astron., 1721-1791.

the *Belles Lettres*, 1464-1536. His son, MARCO ANTONIO, a Latin poet, 1498-1550.

FLAMINIUS, NEPOS, Roman consul, 222 B.C.

FLAMINIUS, TITUS, Roman consul, 197 B.C.

FLAMSTEED, JOHN, born at Denby, near Derby, August 19, 1646, died in 1719. A most laborious and admirable observer, the founder of practical Astronomy in England; he was the first Astronomer Royal. Previous to his public appointments, Flamsteed had shown great zeal and talent; but his reputation rests on the work he achieved after the establishment of the Observatory. Like his great predecessor Tycho Brahe, the instruments as well as the work were mainly his own; drawn however, out of the scanty funds of a poor clergyman instead of the coffers of a noble: nor was the illustrious Dane ever more conscientious, or more laborious; few have excelled him in sagacity, or that theoretic faculty which is one pillar of strength to every first-class observer—the power to know what to observe—to make all work available for some permanent and important purpose. The *Historia Celestis Britannica* contains our first trustworthy catalogue of the fixed stars—the first at least which is available for modern objects; and the mass of lunar observations made by Flamsteed, furnished Newton the means of carrying out and verifying his immortal discovery of Gravitation. The life of Flamsteed contains only one thing, which in one who contemplates it can give rise to pain. The revelations lately made by Mr. Bailly, place beyond doubt the fact of the very unworthy treatment of this excellent observer by Newton and Halley. They outraged his feelings and sported with his rights; nor can the nature of the aim before them be at all accepted as their apology. [J.P.N.]

FLATMAN, TH., an English poet, 1633-1688.

FLAVEL, J., an Eng. Calvinist, divine, d. 1691.

FLAVIEN, patriarch of Antioch, 381-404.

FLAVIEN, patriarch of Constance, 447-449.

FLAVIUS, CAIUS, a Roman ædile, 305 B.C.

FLAXMAN, JOHN. This celebrated English sculptor was born at York, 6th July, 1755, but he settled early in London with his father, who sold plaster casts, &c. The occupation of the father gave Flaxman many opportunities which he might otherwise not have had, and as early as his twelfth year he gained the silver pallet of the Society of Arts for a model. Among his earlier efforts were the various designs which he made for Wedgwood, which had a great share in elevating the general taste of the country, and which now promise a second time to exercise a beneficial influence upon it. In 1782 Flaxman married, and in 1787 took his wife with him to Italy, where he remained at Rome for seven years. During this time he executed his admirable designs in outline from Homer, Æschylus, and Dante, and his great group in marble, for Lord Bristol, of 'The Fury of Athamas;' and 'Cephalus and Aurora' for Mr. Hope.—He returned to London in 1794, where his first work was the monument to Lord Mansfield in Westminster Abbey; this was followed by several others there and in St. Paul's, as that to Lord Nelson, the figure of Sir Joshua Reynolds, and others. He executed also many private monuments, of which that to the family of Sir Francis Baring in Micheldever church is one of the most celebrated.

He produced also some works of a more purely poetic character, as the colossal group of Satan and the archangel Michael for Lord Egremont, the original model of which, with a great number of others, is now placed in a permanent gallery beneath the dome of University College, London, the munificent gift of Miss Denman, the sculptor's sister-in-law. The 'Shield of Achilles,' modelled for Messrs. Rundell and Bridge, is a remarkable work of another class, and completing the whole category of art to which sculpture is applicable:—showing Flaxman working for the social refinement of the potter and the silversmith, for national glory, and domestic piety and affection, for the classic taste of the scholar, and the exquisite sentiment of the poet; in all skilful and great.—He was elected an academicien in 1800, and professor of sculpture in 1810: he died 7th December, 1826, in his seventy-second year. His 'Lectures on Sculpture' are published in one volume, octavo, with fifty-two plates, second edition, Bohn, 1838; they are—1. *English Sculpture*; 2. *Egyptian Sculpture*; 3. *Grecian Sculpture*; 4. *Science*; 5. *Beauty*; 6. *Composition*; 7. *Style*; 8. *Drupery*; 9. *Ancient Art*; and 10. *Modern Art*. These lectures, though his remarks on ancient art want the exactness and precision of modern scholarship, are compositions of great interest, and much practical instruction. [R.N.W.]

FLEMING, CAL., a Socinian minis., 1698-1779.

FLEMING, CL., constable of Sweden, d. 1597.

FLEMING, PAT., a Roman Cath. div., b. 1599.

FLEMING, ROBERT, son of a Scottish divine of the same name, who lived 1630-1694, is the author of a remarkable 'Discourse on the Rise and Fall of the Papacy,' the predictions of which have received a singular fulfilment. In this sermon, published 1701, Fleming ventures his opinion that the French monarchy would be humbled in 1794, that the period of the fifth vial extended from 1794 to 1848, and that in the last mentioned year the papacy would receive its most signal blow, and that it would be followed by the destruction of the Turk.—'An Attempt to Prove the Calculations of Fleming Incorrect,' was published soon after the recent flight of the pope, the writer arguing that the papacy had then irretrievably fallen, while Fleming had expressly stated that it would continue longer! The date of Fleming's birth is unknown, but he died in 1716. [E.R.]

FLEMMING, HEINO H., Count De, a Prussian field-marshal and gov. of Berlin, 1632-1706.

FLEMMING, or FLEMMYNGE, RICHARD, an Engl. prelate, fndr. of Lincoln college, d. 1430.

FLETCHER, A., a Scotch political writer, of Sir R. Fletcher, of Saltoun, 1653-1716.

FLETCHER, JAMES, an hist. wr., 1811-1882.

FLETCHER, JOHN, and FRANCIS BEAUMONT formed one of those partnerships which, though rare in all sections of literature except the drama, have in it been very common, both in England and elsewhere.—Beaumont, the younger son of a judge, was born at his father's seat of Grace in Leicestershire, about the year 1585. By his poetry seems to have been prosecuted for his own sake. Fletcher, whose father died bishop of London, had been born in 1579 at Haverhill, where his father was then clergyman; and he, like his father, left an orphan and penniless when he was mere youth, he had to fight his way for himself, and earned his bread by writing. Both of the poets were academically educated, Beaumont at Oxford, Fletcher at Cambridge. John Beaumont, author of the poem of 'Bosworth Field,' was the elder brother of the one; the religious poets, Giles and Phineas Fletcher, were cousins of the other.—About the beginning of the seventeenth century, the drama was by far the most flourishing department in the literature which then adorned England. All the poetical mind of the nation turned to play-writing; not a few of genius, who are now remembered only for the works of other kinds, Drayton and Daniel were instances, owed their contemporary fame in a great degree to their plays; and several, such as Fletcher, whom we know only as dramatists, would probably have gained higher success had they cultivated other walks of poetry.—The names of Beaumont and Fletcher appear together for the first time in 1607, when the latter was in his twenty-eighth year, and the former in his twenty-second. Beaumont had already published some miscellaneous poems: Fletcher's previous training in authors cannot be traced. The English drama, which soon after 1590 had risen to its greatest glory under Shakspeare, was now not far from the close of its brightest period. The labours of its most illustrious master were about to close; and many of those which were afterwards performed by Jonson were fallings off from the vigour of prime. The two new poets stood, both in time and in spirit, between the era which was made glorious by Shakspeare, and that which terminated, in the middle of the century, the history of the Old English Drama.—The two are said to have lived in the same house in London till 1613, when Beaumont married. They continued to write, sometimes separately but oftener together, till 1616, when Beaumont died, in his thirty-first year or early. Fletcher survived him for nine years, writing actively the whole time; and he died in London of the plague, in 1625. Fifty-three plays are included in the collection of works which we possess as the fruits of those nineteen years. The beautiful pastoral of 'The Faithful Shepherdess' is known to have been Fletcher's; and several other plays of the series were written after Beaumont's death; other writers, however, such as Massinger and Middleton, having perhaps assisted Fletcher in some of them. As to no one of our other thirty-five plays can we assert at all positively, that it was written by Beaumont alone, Fletcher alone, or by both together. We pos-

no authentic information in regard to the circumstances in which any of these were produced; nor can we trace anywhere internal dissimilarities, sufficient to prove even plausible conjectures as to the several shares of the two dramatists. We discover, it is true, in the later works of Fletcher, evidence both of careless taste and of increasing moral depravation; but the ethical faults had begun to show themselves in the very earliest pieces of the joint series.—In virtue of the works thus uncertainly apportioned, Beaumont and Fletcher are acknowledged, all but universally, to stand among our old dramatists, second to none but Shakspeare. If their title to this honour is at all disputed, it can be in favour of Ben Jonson only. Their dramas are more truly and finely poetical than any others which their brilliant age produced, except only the noblest masterpieces of the great master; in the pathetic and romantic they often vie with almost everything that even he imagined; and they abound in scattered passages of the most beautiful and touching poetry. They wanted, however, not only Shakspeare's unrivalled success in conceiving a drama as a whole, but also such skill and care in construction as that which is so admirable in Jonson.—Those who would easily apprehend both the strength and the weakness of these exquisite poets, may learn both from a very few of the dramas which belong to the earliest years of their career. Such are Fletcher's pastoral already named; the romantically beautiful play of 'Philaster;' the harrowing but deeply moving 'Maid's Tragedy;' the spirited though repulsive 'King and No King;' and the lively burlesque, 'The Knight of the Burning Pestle,' which rodes at once the chivalrous romances, and the popular plays founded on them by Heywood and others. More poetical, perhaps, than any of these, is 'The Two Noble Kinsmen,' the authorship of which is the most desperate of the unsolved riddles arising out of these works: Fletcher is allowed to have written part of it, and many are convinced that Shakspeare wrote the rest. Among the later plays, belonging to Fletcher alone, were several comedies of Intrigue, which, partly by reason of their theatrical liveliness, partly, no doubt, because of their moral grossness, were the greatest favourites on the corrupt stage after the Restoration. One of these, 'Rule a Wife, and Have a Wife,' still keeps its place with a few necessary mutilations. [W.S.]

FLETCHER, RICHARD, bishop of London, and father of the celebrated dramatic writer, died 1596. **GILES**, brother of bishop Fletcher, a poet and ambassador to Russia, died 1610. His name, of the same name, author of a fine religious poem, 1588-1628. **PHINEAS**, brother of the last named, author of an allegorical poem, &c., d. 1650. **FLEURANGES, R. DE LAMARCK**, Lord of a French marshal, dist. in the Italian wars, 1490-1557. **FLEUREAU, BASIL**, a French hist., 1620-80. **FLEUREU, C. P., CLARET**, Count De, a French officer and hydrographer, minister of marine under Louis XVI., and distinguished as the inventor of the sea chronometer, 1738-1810. **FLEURY, A. H. DE**, a Fr. cardn., 1653-1743. **FLEURY, CL.**, a French historian, author of 'Ecclesiastical History,' in 20 volumes 4to, 'Manners of the Israelites,' &c., 1640-1723.

FLEURY, W. F., Joly De, attorney-general to the parliament of Paris, distinguished for his collections of the parliament registers, &c., 1675-1756.

FLINDERS, MATTHEW, was born at Donington in Lincolnshire, about the year 1760. He was early sent to sea in the merchant service, but joined the royal navy afterwards; and in 1795 went to New Holland as midshipman in the same vessel in which George Bass was surgeon. His adventurous voyages with Bass have been noticed already. On returning to England he was promoted; and in 1801, as captain of the Investigator, 334 tons, sailed from England with a crew of 88 men, circumnavigated New Holland, and made accurate surveys in almost every part, contributing more than any other discoverer to our knowledge of this and the adjoining islands. He was accompanied by Mr. Robert Brown, one of the most distinguished naturalists of modern times, an astronomer, two painters, and a miner. His own ship being condemned, he left for England as passenger in a store ship, the Porpoise, and was wrecked on the N.E. coast, August 17, 1803. The Bridgewater, Capt. Palmer, and Cato of London, were in company; the latter also struck on the reef; but the former got over safely, and her captain pursued his course without rendering any assistance to the other ships' companies. Flinders, by his admirable arrangements, got the men landed upon a sandbank, a little raised above high tide. On the 26th, he left for Port Jackson, a distance of 750 miles, in a small open boat; reached in safety September 6th; and returned October 7th to the rescue of the crews, with a schooner of 29 tons, which was in very bad condition, but the only vessel he could procure. Two other vessels came with him, one for China, the other to return to Port Jackson. A part of the men sailed for England with Flinders in the small vessel, which reached Mauritius in safety, but was so ill conditioned as to be able to proceed no farther. Here the French authorities seized him, and detained him for six years, treating him with cruel severity. His health was so much undermined when he reached England in 1810, that he only survived four years; having succeeded, however, in completing an account of his voyages, in 2 vols. with maps. He died July, 1814, on the same day on which his work made its appearance. During his captivity, a French expedition, under Baudin, with whom he had before fallen in, had been sent out to survey the coast of New Holland, and it was generally believed that Flinders was kept a prisoner in order to enable Baudin to publish before him. This at least he did, and re-named all the points before named by Flinders and others—preceding observers were ignored, and the whole put forth as of Baudin's finding, though he discovered only about 50 leagues instead of nearly 1,000;—an instance of dishonest meanness happily of rare occurrence in any nation. FLUDD, ROBERT, an English physician and Rosicrucian philosopher, was the son of Sir Thomas Fludd, treasurer of war to Queen Elizabeth in France and the Low Countries, and lived 1574-1637. It is usual with biographers to style his works a farrago of nonsense, without considering that natural philosophy, as cultivated at the present day, had no existence in his time. Kepler and Gassendi, however, thought it worth while to write against him, and, what is curious, the former condemns the 'chemists, Hermetics, and Paracelsites,' in one breath, complaining that they speak in enigmas, and receive for philosophy the fables of poets, while it is the endeavour of the *mathematician* to bring things to light. It is amusing to read in Fludd's 'Monochordium Mundi Symphoniacum,' or reply to Kepler, how he turns the tables by proving that mathematics themselves come from the soul, and are concealed under fables with all the wisdom of antiquity. Fludd was a genuine brother of the Rosy Cross, and a man of enthusiastic piety. The principle of his system is the recognition of two worlds in the universe, and the comprehension of all things in a grand harmony like that of the soul in the body. His works indeed are not likely to be read with patience by the scientific inquirers of the present day, but they will always be interesting as a study in the history of speculative philosophy. It is to be noted also that the Theosophists kept alive the spirit of free inquiry when the church and the metaphysical schools were alike intolerant of it. [E.R.]

FOLENGO, G. B., an Italian commentator, and reformer of church discipline, 1499-1559.

FOLENGO, THEOFILO, a burlesque poet Italy, born 1491, d. in a monastery of Padua 1564.

FOLEY, SIR THOMAS, an English vice-admiral distinguished at Cape St. Vincent, the battle of the Nile (where he led the British fleet into action), at Copenhagen, and late commander-in-chief at Portsmouth, 1757-1833.

FOLIGNO, F. FREZZI DU, an It. poet, d. 1414.

FOLKES, MARTIN, an English antiquary philosopher, born 1690, successor of Sir Isaac Sloane as president of the Royal Society 1747, vice-president of the Society of Antiquaries 1751, contributor to the Philosophical Transactions, and author of numismatic tables, died 1754.

FOLLETT, SIR WILLIAM WEBB, an eminent lawyer, was born at Thopsam, near Exeter, on December, 1798. He exhibited an early feebleness of constitution so extreme, that it is said his friends could hardly anticipate the feasibility of his achieving eminence in any pursuit. As he grew up, however, he showed how vigorously the intellectual capacities may rise and flourish in association with physical weakness. He studied at Trinity College, Cambridge, where he took the degree M.A. in 1821. In the same year he commenced practice as a special pleader, and he was called to the bar in 1824, attaching himself to the western circuit. Severe attacks of illness rendered necessary a careful economy of his strength, and an adjustment of the sedentary and active employments of the profession. His innate capacities, however, and careful husbanding of his resources led him by gradual and sure steps to professional leadership. He attached himself to the Conservative party, as represented by Sir Robert Peel, entered parliament as member for Exeter in 1831. He seldom spoke except in matters in which he was carefully prepared; and it has been rare for practising lawyer so readily to obtain the ear of a house. When Sir Robert Peel took office in 1834, he became solicitor-general, and in 1844 he succeeded Sir Frederick Pollock as attorney-general. The consumptive symptoms, to which he had long been liable, alarmingly increasing, he died on 28 June, 1845. [J.H.]

FONSECA, PETER DE, a Portuguese Jesuit professor of philosophy at Coimbra, and afterwards professor of theology at Evora, au. of 'Co upon the Metaphysic of Aristotle,' &c., 1528-1593.

FONTAINE, C., a French poet, 1515-1589.

FONTAINE, JEAN DE LA, one of the classic of French literature, was born in 1621, at Chateau-Thierry in Champagne, where his father was superintendent of the royal forests. His characteristic indolence showed itself from childhood and his education was very imperfect. He was about twenty-two years old when his literary ambition was awakened by the odes of Malherbe from whose seriousness and dignity, however, was soon diverted by the more congenial writings

such men as Rabelais. Succeeding to his father's office, he married, neglected his wife and child, and allowed his property to waste away before his eyes. One of Cardinal Mazarin's nieces, being banished to Chateau-Thierry, admired his verses, and carried him to Paris; and there, speedily welcomed into the best literary and aristocratic circles, he spent the last thirty-five years of his life. The first volume of his 'Contes' appeared in 1664; a second was added in 1671. These tales, though full of the fine touches of his genius, are grossly and unpardonably indecent. His twelve books of his 'Fables' were published in equal halves in 1668 and 1678. It is through them that La Fontaine is universally known.—With no originality of invention, very little depth of reflection, and a total incapacity of consecutive thinking, he is yet one of the most interesting and attractive of writers. He is an inimitable teller of small stories. His short flights of fancy, his minute strokes of observation, his transitions from grief moods of pathetic seriousness to flashes of gayest wit, are all set off by a diction the most carefully and delicately refined, and breaking out incessantly into felicitous turns of novel expression. —La Fontaine's personal character made him at once the pet and the laughing-stock of his friends and patrons. To him might be applied, with little injustice, the epithet wrongly thrown on Goldsmith, of 'an inspired idiot.' He was not only absent in mind, indolent to excess, and ignorant alike of the world and of the most ordinary business: he displayed a want of interest in important things, and a dreamy absorption in trifles, which are hardly to be understood or excused, unless they are accepted as tokens of strange intellectual weakness. Even from literature, the only thing which he had any knowledge, he caught no ideas but such as lay within his own narrow sphere. Reading Plato in translations, and hearing passages of the philosopher read by Racine, he admired him enthusiastically as the most amusing of all writers; and once, while dozing in the midst of an animated theological discussion, he awoke only to ask the company whether they thought Saint Augustine had as much wit as Rabelais. After it had become clear that he was unfit to take charge of himself or his affairs, he was received as an inmate, and treated like an indulged child, in the house of Madame De La Sablière, a lady of rank. His patroness spoke of her three animals, the dog, the cat, and La Fontaine. After his lady's death another friend cared for him in a similar fashion. In 1692, during a dangerous illness, his confessor prevailed on him to make a public declaration of repentance for having published the 'Contes,' and he was also induced, though not till after long resistance, to burn a comedy which he had written, and as to which we do not know whether it was or was not morally bad. After this his chief literary employment was the versifying of the Latin hymns of the church. He died in 1695. [W.S.]

FONTENAY, L. A., De Bonafons, a French Jesuit, auth. of a Dict. of Artists, &c., 1737-1806.

FONTENELLE, BERNARD LE BOUVIER DE, a distinguished literary *savant* and mathematician, called by Voltaire the most universal genius of the age of Louis XIV., was born at Ronen 1657, and died in 1757, on the eve of completing his centenary. He is best known in this country by his 'Conversations on a Plurality of Worlds,' and his 'Dialogues of the Dead;' while in France, his 'History of the Academy of Sciences' is regarded as a masterpiece. His works form 5 vols. in 8vo, published 1825. The mother of Fontenelle was sister of the celebrated Corneille.

FONTENU, L. F. DE, a French archæologist, auth. of memoirs on numismatics, &c., 1667-1759.

FONTI, B., an Italian philologist, 1445-1513.

FOOT, JESSE, an English surgeon, author of the 'Life of John Hunter,' &c., 1744-1827.

FOOTE, SIR E. J., a naval officer, 1767-1833.

FOOTE, SAMUEL, born about 1721 at Truro in Cornwall of an ancient family, was educated at Worcester College, Oxford. His father was member for Tiverton, Devonshire; his mother heiress of the Dinely and Goodere families. Young Foote was designed for the law, and had chambers in the Temple, but soon relinquished the study; married, entered fashionable life, and lost his fortune by gambling. Driven by necessity to the stage, he ventured upon the characters of 'Othello' and 'Fondlewife,' in the latter gaining some reputation. In 1747 he became manager of the Haymarket theatre, performing there the joint part of actor and author. The first piece he produced was called 'Divisions of the Morning,' and exhibited well-known characters in real life, of whose peculiarities he proved himself to be an admirable mimic. Notwithstanding legal objections to this kind of stage caricature, Foote contrived to continue his performances for many years, and even obtained, through the duke of York, a patent of the theatre for life, running from the 15th May to the 15th September in every year. On a party of pleasure with the duke and his friends he had previously the misfortune to break his leg, an acci-

dent which necessitated its amputation. On the decline of his health, he disposed of his patent to Mr. Colman, on the understanding that he was to receive £1,600 per annum, and a stipulated sum whenever he chose to perform. A paralytic stroke prevented him from availing himself of this privilege more than two or three times. He afterwards resided at Brighton, and died at Dover, with an attack of palsy, 21st October, 1777. He wrote, besides his various mimetic entertainments, twenty dramas of small literary merit, but full of vivid sketches of character. His style he seems to have borrowed from Molière; but his humour was undoubtedly original, and indeed peculiar. [J.A.H.]

FOPPA, W., an Italian painter, died 1492.

FOPPENS, J. F., a Flemish critic, 1689-1761.

FORBES, ALEXANDER, Lord Forbes of Pit-
sligo, the supposed prototype of Scott's baron of Bradwardine in Waverley, commander of a troop of horse in the rebellion of 1745, and author of 'Moral and Philosophical Essays,' died 1762.

FORBES, WM., first bp. of Edinb., 1585-1634.

FORBES, SIR W., author of 'The Life and Writings of Dr. Beattie,' founder, in conjunction with Sir J. H. Blair, of the first bank in Edinburgh, and a member of the literary club attended by Johnson, Reynolds, Burke, and Garrick, born at Pitsligo, 1739, died 1806.

FORCELLINI, AEGIDIO, an Italian lexicographer, the pupil and fellow-labourer of Facciolati in the great Latin dictionary, 1688-1768.

FORD, JOHN, one of the best of our old English dramatists, was a contemporary of Beaumont and Fletcher, having been born in 1586. He was the second son of a country gentleman in Devonshire, and became nominally a barrister. In regard to the details of his life hardly anything certain has been discovered; and as to the date of his death it is only conjectured that it did not happen before 1640. Ford is an exquisite master of rhythmic melody, and abounds in touches of sweet description. While, likewise, he has an insatiable fondness for representing incidents profoundly terrible, his success in the filling up lies, not in the strength which was required for fitly embodying such scenes, but in a melancholy and wailing pathos, in which he is more effective than any other play-writer of his age. His genius, truly poetical, is lyric rather than dramatic. His earliest piece, acted in 1629, was the romantic play 'The Lover's Melancholy,' which contains his famous description of the nightingale. His manner, both of feeling and of expression, may be well gathered from that work and his 'Broken Heart;' and some of the most touching passages in our poetry may be read in his revolting play, 'Tis Pity She's a Whore.'

FOSTER, H., an English navigator, 1797-1831.

FOSTER, JAMES, D.D., a minister of the independents, celebrated for his eloquence and popularity as a preacher, and for his theological and religious writings, especially his 'Defence of Revelation' in answer to Tindal, 1697-1753.

FOSTER, JOHN, a distinguished classical scholar and churchman, author of an 'Essay on the Nature of Accents and Quantity,' 1731-1773.

FOSTER, JOHN, was born 17th September, 1770, in the parish of Halifax, England. His father, who rented a small farm, endeavoured to add to his scanty means by employing the intervals of agricultural labour in weaving. John was early trained to the same employment, and till the age of fourteen he was occupied in spinning wool to a thread by the hand wheel. At that period he entered into the regular service of a master manufacturer, but he always entertained a strong distaste to manual labour. An inveterate habit of mental abstraction led him constantly to live in an ideal world of his own; and as his weaving, in consequence of his mind being engrossed with a different train of thoughts, was too often executed in a slovenly and unworkman-like style, his employer was dissatisfied, and discharged him from the service. His friends, who knew the piety, the great intellectual endowments, and literary taste of the youth, urged him to direct his views towards the ministry. His parents, who were a very religious couple, and connected with a small baptist church at Wainsgate, had instructed him carefully in the fundamental principles of the gospel as well as in the denominational peculiarities of their own sect, and he had, in accordance with his own ardent wish, been admitted a member of the baptist church at the age of seventeen. In resolving now to devote his life to ministerial work, he of course contemplated exercising his gifts within the pale of the baptist communion, and accordingly finished his course of preparatory study at the Baptist College, Bristol. During the whole of his college curriculum he exhibited the same mental qualities by which he was so much distinguished in after life—an irrepressible curiosity to examine everything, great decision of character, an ambition of intellectual superiority, and a morbid desire to impart an air of novelty and freshness to old and familiar subjects, by striking out into original paths of illustration, or clothing them in the garb of an unwonted phraseology. He

commenced his career as a preacher at Newcastle-upon-Tyne on 5th August, 1792, whence, after a brief engagement of three months, he went on invitation to undertake the pastorate of a baptist meeting in Swift's Alley, Dublin. In that place he continued to minister for three years, and at the expiry of that term he returned to England, being elected minister of the general baptist church of Chichester. But, unfortunately, his style of preaching, though powerful, and to an intellectual audience a great treat, was little fitted to make an impression on the popular mind. The congregation, small at the first, gradually diminished under his superintendence, and at length became extinct. Through the kindly offices of his friend Mr. Hughes, secretary to the British and Foreign Bible Society, Foster was employed for a while on a local mission, and at length was intrusted with the board and education of twenty Africans who had been brought to this country to be trained as future missionaries in preaching the gospel in their own benighted country. This engagement having terminated, Mr. Foster resumed his pastoral duties by settling in 1800 at Downend, a country village in the neighbourhood of Bristol, where there was a small baptist community, and where he was introduced to Miss Maria Snooke, the 'friend' to whom he addressed his 'Essays,' and who at a subsequent period became his wife. At the end of five years he accepted an invitation from a congregation in Frome, Somersetshire, the members of which, though few, were for the most part educated persons, and prepared to appreciate the talented and philosophical discourses of Foster, although many of them through the influence of their former pastor, had become unfortunately tinged with Arian principles. It was during his ministry in this place that Foster published his celebrated 'Essays,' and became the principal contributor to the *Eclectic Review*, the articles for which formed his staple or rather exclusive composition for thirteen years. A glandular affection of the neck, which increased to an enormous size, obliged him to discontinue his public labours in the pulpit. He thenceforth employed himself chiefly in preparing works for the press, the chief of which were his 'Discourse on Missions,' and his 'Essay on the Evils of Popular Ignorance.' Mr. Foster, having greatly improved in his health, acceded in 1822 to the pressing invitation of some friends to deliver a fortnightly lecture at Broadmeadow chapel, Bristol, and this office he performed till Mr. Hall's settlement in town led to its cessation. Mr. Foster was a man of rather extreme views both in civil and religious politics. But he was eminently a man of God, and died on the 14th October, 1839, in the peace and joy of believing. [R.J.]

FOUQUIERES, J., a Flem. painter, 1580-1659.

FOURCROY, ANTOINE FRANCOIS DE, born at Paris 1755, died 1809. The descendant of a once wealthy family, Fourcroy was the son of a poor apothecary, and after many vicissitudes was enabled to engage in the study of the medical profession under the auspices of the distinguished anatomist Vic. d'Azyr. Under Bucquet he studied chemistry, and ultimately succeeded Macquer in the chair of chemistry at the Jardin du Roi, which he held for twenty-five years with increasing popularity. During the heat of the French revolution, Fourcroy possessed considerable power, which he exercised in promoting improvements in the systems of scientific education. He took an active part in the institution of the polytechnic and normal schools, the museum of natural history, the central schools, and in the re-establishment of the universities and colleges, which had been destroyed by the convention. His most celebrated work was his *System of Chemistry*, which at one time had a great reputation, and was translated into English. In most of his experiments he had associated with him his pupil Vauquelin, whom he had the merit of training and patronising. He was twice married, and left a son and daughter; but he left no fortune, and his two sisters were afterwards supported by the faithful Vauquelin. [R.D.T.]

FOURCROY-DE-RAMECOURT, CHARLES RENE DE, a Fr. officer and engineer, 1718-1791.

FOURIER, CHARLES, born at Besançon in 1772, died in Paris 1837. In recent times a new order of political speculations has obtained a hearing, and been confessed important,—speculations affecting the fundamental principles on which modern societies are constructed. Struck by the evil inherent in the fact that the multitudes are mere 'hewers of wood and drawers of water,' ST. SIMON, ROBERT OWEN, and others, have sought for new organizations, and declared war against the principle of competition, or 'selfishness,' as the basis of a right social fabric. Of these remarkable inquirers, Charles Fourier is the most original and profound: practical by nature, and eminently sagacious, he took a more complete view of our human springs of action; and proposed a scheme that might be tried and corrected by experiments on a scale of sufficient moderation to

carry no menace of revolution. We cannot describe here either the arrangements or the philosophy of the *Phalange*; but justice demands the avowal that Fourier's theoretic views are not in conflict with our highest conceptions concerning the order of the Moral Universe. The *Phalanx* has been put partially to proof—chiefly in America. The experiment has never succeeded in the fullest sense; nevertheless, its projects have read the lesson involved in the failure, and resolved to try again. The *Fourierists* were one of the schools in France, because of whose existence the cry of Socialism was recently raised, with the aim to overthrow the Republic: very unwarrantably in so far as they were concerned, for they neither desired nor threatened confusion. [J.P.N.]

FOURIER, J. B. G., a French mathematician and physician, distinguished for his scientific memoirs and historical preface, contributed to the famous 'Description of Egypt,' where he accompanied the expedition of Napoleon, 1768-1830.

FOX, CHARLES, an English artist, 1749-1809.

FOX, CHARLES JAMES, was born at No. 9, Conduit-Street, London, on 24th January, 1749. He was the third son of the Right Hon. Henry Fox, created Lord Holland in 1763. Charles was a frank, lively, popular child, became a family oracle in his infancy, and was supremely indulged. He obtained the rudiments of his education at a preparatory school at Wandsworth, kept by a Frenchman, which he entered in 1756, passing to Eton two years afterwards. In 1763, when he was but fourteen years old, his father indulged him with a gay tour on the continent, which not only interrupted his education, but is said to have fostered the dissipated habits which stained his early career. On his return, he studied at Hertford College, Oxford. Again he travelled abroad; and on his return, in 1768, when not twenty years old, he found himself member of parliament for Medhurst. In 1770 he became a junior lord of the admiralty, under Lord North. He remained, with an interval of two years, in connection with the North ministry until 1773, when he was removed somewhat contemptuously, and the ground of his dismissal has been attributed to rash and presumptuous ministerial acts, committing his colleagues to a policy the reverse of what he himself afterwards held. Of course it was a political necessity that he should join the opposition, and in the prosecution of the measures leading to the American war, he found a ground of hostility congenial to the sentiments then ripening in his mind. Following out these principles he joined the Rockingham administration, but resigned when the death of its leader made way for Lord Shelburne. Lord North and he finding each other side by side in opposition, thought they might work together in office, and in 1783 that coalition was made which has given just occasion for so much censure; not because it was a coalition, but because instead of uniting together those who were near each other in sentiment by the

bond of a common harmony of purpose, it was an attempt to unite those who were opposite by the tie of common hostility to the defeated party. Fox's connection with the ministry, nominally under the duke of Portland, and the defeat of his India bill, suggested by the growing jealousy of the prerogative of the crown, with the triumph of Fox's rival, young Pitt, are conspicuous and well-known historical events, which can only receive a passing reference. In the regency question he was evidently led by personal predilections to maintain that the office belonged to the heir apparent, and was not at the disposal of parliament. Since the commencement of the French revolution, we must date a great change in Fox's nature, arising from the serious reflections produced by events so momentous. He had been leading such a life of thoughtless dissipation as generally deadens the moral qualities as well as the intellectual perceptions. But he was one among the few who could preserve through such orgies 'the whiteness of his soul.' His mind was justly characterized by Grattan's reference to its 'careless grandeur,' and there never lived a statesman whose character is so free of sordid motives, narrow views, or paltry objects. His hearty rebuff of Napoleon's insinuation that his rival had countenanced assassinations, was characteristic of his candid, honest nature. It is strange that of one who was so much revered by his party and his personal friends, there should be no good biography, for the collection lately edited by Lord John Russell, though it passed through the competent hands both of Lord Holland and Mr. Allen, professes only to afford materials for a life of the great leader. The reason may, perhaps, be, because while we know Fox to have foreseen that the general good of the community, and not personal aggrandizement, or the triumph of a party, should be the object of a minister, yet his own place in history is that of the champion of a party rather than of a policy. In 1797 he formally seceded from parliamentary action, and lived a life of literary retirement, in which he wrote his historical fragment on the reign of James II. He returned to public life in 1801. In 1806 he formed the real leader of that Whig ministry nominally headed by Lord Grenville; but the ministerial career, of which so many high hopes were formed, was doomed to be brief, and he died on the 13th of September, 1806. [J.H.B.]

FOX, EDWARD, a diplomatist in the service of Cardinal Wolsey, made bp. of Hereford, d. 1536.

FOX, FRANCIS, an English divine, died 1738.

FOX, GEORGE, founder of the Society of Friends, first saw the light at Drayton, Leicestershire, in the year 1624. His father was a weaver, who bestowed the greatest pains to instruct his son in the principles of revealed truth, and to imbue his youthful mind with impressions of piety. Having entered the service of a grazier, young Fox was for several years employed in tending sheep, an occupation which both gratified his natural love of solitude and nursed his contemplative enthusiastic turn of mind. When sixteen years of age he conceived that he was honoured with a special commission from heaven; and accordingly, in preparing for the work to which he was thus miraculously called, he abandoned business for 170 years, lived entirely in the woods on such wild

plants and vegetables as he found there, but practising long and frequent fastings, with many other austerities; his days devoted to religious meditation and his nights passed in sleepless excitement. In 1648 Fox emerged from this wild and solitary life to enter on the active discharge of his mission. His first appearances were made in Manchester, where taking his station in the public streets, he attracted vast crowds of the people around him, and was several times imprisoned as a disturber of the public peace. Most of the large towns of England he visited to propagate his doctrines. Great patience, self-denial, and at the same time confidence in the truth of his principles, distinguished him,—for everywhere he was exposed to the rude and boisterous assaults of the populace; and in London he was arrested and carried into the presence of Cromwell, who, however, on due examination dismissed him, being fully satisfied of the harmless tendency of his principles and conduct. Nay, the Protector frequently interposed to rescue him from the county magistrates. In the course of his itinerant ministry through England, he was successful in gaining numbers of proselytes, particularly at Derby, where his followers first received the name of Quakers, from the tremulous tones in which they loved to speak, and from their calling on all to 'tremble at the name of the Lord.' After marrying the widow of Judge Fell, who had hospitably entertained him during his journey through Wales, Fox meditated a voyage of proselytizing in America and the West Indies. After two years' absence he returned to England, where he was subjected to renewed trials, was imprisoned, tried by jury, and condemned for refusing the oaths of supremacy and abjuration. His sentence was indefinite imprisonment. But after a year's confinement he was released by the unanimous decision of the King's Bench. On recovering his liberty he travelled through Holland and various parts of Europe, diffusing his principles, and at length worn out by a life of incessant toil and austerities, he returned to England to spend the remainder of his days in retirement. With all his peculiarities he was a pious man, well versed in the Scriptures, and had an extraordinary gift in prayer. He died in 1690. [R.J.]

FOX, HEN., the first Lord Holland, and father of the celebrated statesman, born 1705; member of parliament for Hendon, 1735; secretary at war, 1746-1756; raised to the peerage 1763, d. 1774.

FOX, JOHN, author of the 'Martyrology,' was a native of Boston, Lincolnshire, where he was born 1517. Early distinguished by his classical acquirements, he was elected fellow of Magdalene College, and directed his studies for entering the church. But having evinced a predilection for the reformed opinion, he was on a charge of heresy being preferred against him, expelled from the university, and deprived of his fellowship. His character for learning, however, procured him the patronage of several noble families, and amongst others the duchess of Richmond engaged him as tutor to the children of her brother, the earl of Surrey, then a state prisoner in the Tower. Edward VI. also befriended him, and restored him to his fellowship. On the accession of Mary, Fox, like a number of other reformers, sought an asylum on the continent, and after many wander-

ings he settled at Basle, as corrector of the press in an extensive printing office in that city. When Elizabeth ascended the throne, Fox hastened to return to his own country, and through the powerful influence of Cecil, who was his friend, he was appointed to a prebend in the cathedral of Salisbury, and might have obtained preferment, but for his conscientious scruples about some matters of ceremony. His celebrated 'Book of Martyrs' attests his hatred of popery, and his intense admiration of the principles of the reformation. He died in 1587, at the age of sixty-nine, leaving behind him a high reputation for piety and learning. [R.J.]

FRANCHI, J., an Italian sculptor, 1730-1806.

FRANCIA. FRANCESCO RAIBOLINI, commonly called FRANCIA, from the name of his master, was born at Bologna, about 1450. He was brought up a goldsmith, and did not take up painting until he was nearly forty years of age, but at this time he executed some important works. He carried on both professions, and made a species of parade of his accomplishments by signing himself *Aurifex*, jeweller, on his pictures, and *Pictor*, painter, on his jewellery.—Francia was a great painter, indeed a consummate master in the style of art prevailing in his own day; in that exact and rigid manner in which nature is scrupulously copied without any license of generalization: he is perhaps the highest representative in a technical view of the *quattrocento* school, that properly signified by the modern misnomer *preraphaelite*. Francia's large picture in the National Gallery is a capital example of this early style, the second or Florentine manner of Raphael himself, which Francia had some share in forming. He died at Bologna, 6th January, 1518.—(Vasari, *Vite dei Pittori*, &c.; Calvi, *Memorie della Vita de di Francesco Raibolini*, &c. Bologna, 1812.) [R.N.W.]

FRANCIA, DON GASPAR RODRIGUEZ DE, commonly called DR. FRANCIA, and known as the dictator of Paraguay, was born at Assomçion, in

that province, 1757, and began his career as a barrister.—In 1810, when the Spanish province of the River Plate rebelled against the authority of the viceroy, Francia was already known for his inflexible honesty and rare talents, in a country where the judges themselves were openly corrupt and the policy of the Spanish government had kept the people in the grossest barbarism and political ignorance. The Buenos Ayreans having erected a new central government (which he declared its independence of the Spanish crown, 1816), made an attack on Paraguay, and the latter, repelling its invaders, proceeded to debate the question of allegiance to Spain in any form whatever. The influence of Francia prevailing the province declared its absolute independence and appointed him secretary of a triumvirate from which post, by the year 1815, he had risen to the sole dictatorship, which he retained till his death in 1840. His marked policy in refusing all intercourse with his neighbours during this period and the complication of circumstances in the River Plate, has given his name as much notoriety in Europe, as the heartless tyranny which he is accused of having exercised in domestic affairs. In regard to the former, it would be easy to show that his views were dictated by sound statesmanship; for by all evidence, down to the fall of Rosas a more fickle and profligate class of people does not exist than those ambitious of dominion in the province of Buenos Ayres; and the dream of Francia's life, a *political and commercial treaty with England*, as the preliminary of any intercourse with the neighbouring states, was the only means of saving his people from the same anarchy. As to the latter of these charges, Sir Woodbine Parish who accuses Francia of 'systematic selfishness' and declares his belief that 'a more bloody and unscrupulous tyrant never existed,' himself writes—'It had been supposed that when Francia died Paraguay would have again joined the confederation of the provinces of the Rio de la Plata, but a yet (1852), that is not the case; and it would appear that there is a party there not only ambitious of maintaining their independence, but, what is still more extraordinary, disposed to continue a system of isolation and tyranny little short of that established by Francia.' The fact is, with all their ignorance, the Paraguayans understand results, and there are circumstances in which mercy itself must seem cruel. Francia with his own head and hands preserved order in Paraguay for twenty-five years, in which period the neighbouring state of Buenos Ayres had changed its government, amid scenes of turbulence and bloodshed, nearly forty times! FRANCIS, PHEBUS, kg. of Navarre, 1479-83.

FRANCIS, ROMAIN, a Flem. architect, d. 1735.

FRANCIS, SAINT. The Roman Calendar contains five saints of this name.—1. JEAN BERNARDIN, commonly called FRANCIS OF ASSISE, founder of the order of mendicant friars named after him, was born 1182, and relinquishing the commercial pursuits to which he was brought up, devoted himself to poverty and self-mortification, and to the preaching of the gospel. His reputa-

tion for sanctity drew a great number of disciples around him, to whom he gave the first rules of their order in 1209, engaging them to vows of poverty and submission. Between this period and his death, which took place at Assise, in 1226, he founded many monasteries on the continent, and even travelled into Egypt to convert the Sultan Meleddin. In consequence of his habits of abstraction, he had several visions of spiritual symbols. He was canonized by Gregory IX. in 1230.—2. The next in order of time is an illiterate ascetic named FRANCIS OF PAULO, founder of the Minims, or lowest religious order, born in Calabria, 1416, died at the convent of Plessis-du-Parc, 1507. Little is related of him except his solitary life and abstinence, and if he rivalled Francis of Assise in austerity, he was certainly far below him in usefulness.—3. FRANCIS OF BORGIA, a Spanish nobleman and courtier of the reign of Charles V., turned to a religious life by the solemn circumstances attending the funeral of the Empress Isabella, after which he became a disciple of Ignatius Loyola, and was appointed by him to preach the gospel in Spain and Portugal, and finally succeeded him as chief of the Order. He is the author of many ascetic writings, and contributed much to the perfection of the organization of the Jesuits. Francis of Borgia died at Rome in 1572, and was canonized by Clement IX. in 1671.—4. FRANCIS OF SALES, born of a noble family in the neighbourhood of Geneva, 1567, and first distinguished by the reclamation of the protestants in the neighbouring valleys. On the death of the bishop of Geneva, Francis of Sales succeeded him, and redoubled his zeal for the reform of the diocese and the monasteries. To further his benevolent designs, he instituted, in connection with Madam de Chantal, the Order of the Visitation at Annecy, in 1610. He died in 1622, after a life devoted to works of charity, and was canonized 1665. His religious works are highly esteemed, especially his 'Treatise on the Love of God,' and 'Introduction to a Devout Life.'—5. FRANCIS XAVIER, surnamed the 'Apostle of the Indies,' born at the castle of Xavier, in Navarre, 1506, began his mission at Goa, 1542, and died in one of the Chinese islands, 1552. He was the intimate friend and disciple of Loyola, and was for some time professor of philosophy at the college of Beauvais. He was canonized 1622, and his 'Letters' published at Paris in 1631.—Each of these 'Saints' exhibits the spirit of enthusiasm in a different form, and the most pleasing to contemplate is that of Francis of Sales. In Francis of Assise it affected a species of insanity, and aimed at dominion. The friars of his order were at last a voluptuous and lazy body. In the disciples of Loyola there was more of the spirit of worldly wisdom, and the greatest of them, St. Francis Xavier, was characterized by extreme subtlety. [E.R.]

FRANKLAND, TH., an Eng. hist., 1633-1690.

FRANKLIN, BENJAMIN, born in Boston, Massachusetts, 6th January, 1706; died on 17th April, 1790. The name of Dr. Franklin has long been an household word in America,—he was her moralist, statesman, and philosopher: his discoveries in Electricity have given him a permanent place in scientific history: and he deserves highest honour from all mankind, because of his services to the cause of rational Liberty and the independence of Nations.—We must omit all details concerning Franklin's early life: however, if any one would sustain hope amid unpromising labour—discern the inestimable value of small portions of time economized and put scrupulously to uses—or learn how cheerfulness, patience, and fortitude, guided by good sense and integrity, must ever command success,—he will find nowhere better instruction than in that graphic narrative of the events and struggles of his opening manhood, by which Franklin has let us into the innermost being of the journeyman printer of Philadelphia. Distinguished no less by practical benevolence, than by an almost intuitive appreciation of the wants and character of early American society, Franklin could not fail to rise into authority among his countrymen: accordingly we find him their favourite counsellor in most of the grave difficulties belonging to that epoch of American history. Commencing public life in the struggle between the assembly of Pennsylvania and the old proprietary Governors,—we again meet him proposing to the different States a project of union, which afterwards became the basis of the confederacy: then, on a mission to England regarding the American Stamp Act: afterwards—driven from his loyalty—Ambassador to France on the part of his countrymen; the observed of all observers in Paris, soliciting aid in arms from the court of Versailles: finally Minister to England, signing the treaty by which the mother country, in due humiliation, bowed her head before the independence of her former Colonies.—It has been said that Franklin represented the practical genius, the moral and political spirit of the eighteenth century, as Voltaire represented its metaphysical and religious scepticism: this, at least, is certain,—no man saw more clearly, or felt more profoundly in his own person, the political and moral ideas which necessarily bear sway in a strictly industrial community like the one emerging from infancy in the New World. Unconnected with England by birth or close association, he looked only with astonishment on those pretensions to prerogative, which certainly could find no natural soil, where all men were socially equal: and his system of morals included every sanction and precept, likely to re-

commend themselves to a people, who could never reach prosperity unless through patient industry and the exercise of the prudential virtues. His code was 'The Way to Wealth': and the wisdom of 'Poor Richard,' instructed every man, how by the strength of his arm, and dominion over his passions, wealth might be attained and made secure. Since Franklin's time a new element has arisen in America; powerful tendencies are developing with higher aims than mere wealth, and which demand a larger code than the utilitarian. Franklin did not recognize, or rather had not foreseen the necessary advent of that speculative habit now very rapidly becoming dominant over American thought: but in his treatment of the equally powerful tendency of which he saw the influence, and whereof he himself so largely partook, his 'Poor Richard' is complete:—he threw off all prerogative and tradition, and looked at things as they are. Temperance, Silence, Order, Resolution, Frugality, Activity, Sincerity, Justice, Moderation, Cleanliness, Tranquillity, Chastity, Humility,—these are his virtues; and Franklin teaches how to acquire them, by precepts, which in earlier times, would have ranked as *golden verses*; they are as valuable as anything that has descended from Pythagoras.—It is rare that a single mind establishes claims so various as those of Franklin:—he ranks also among the foremost as a Physical Inquirer and Discoverer. Attracted by the opening subject of *Electricity*, he was the first who reduced it to order: and that grand step is owing to him which identified the attraction and repulsion of rubbed glass and amber with the energy that produces lightning, and causes the most imposing of meteorological phenomena. His memoirs on Electricity and other physical subjects, still astonish one by their clearness and chastity, and the precision and elegance of their method; their style and manner are worthy of admiration as their doctrines. The gain for the author immediate admission to the highest scientific societies in Europe.—In his personal bearing Franklin was sedate and weighty. He had no striking eloquence; he spoke sententiously; but men instinctively felt his worth, and submitted themselves to his wisdom. Except Washington, whom in many qualities he more resembled, the New World yet ranks among her dead, nowhere so great a Man. An edition of his works in ten volumes has recently been published by *Jared Sparks*, the excellent Editor of the writings of Washington. [J.P.N.]

FREDERICK I., king of Sweden, born 1676, associated with his wife, Ulrica Eleonora, sister of Charles XII., as king 1720, died 1745.

FREDERICK I., king of Prussia, called, as elector of Brandenburg, Frederick III., born 1657, succeeded to the electorate 1688, crowned king 1701, died 1713. FREDERICK WILLIAM I., born 1688, succeeded 1713, died 1740. FREDERICK II., his son, called 'The Great,' (see next article). FREDERICK WILLIAM II., nephew of Frederick the Great, born 1744, succeeded 1786, united with Austria and Russia in the division of Poland, and died the same year, 1797. FREDERICK WILLIAM III., son of the preceding, born 1770; succeeded 1797; died, and succeeded by his son FREDERICK WILLIAM IV., 1840.

FREDERICK II., king of Prussia, commonly called Frederick the Great, was born 24th January, 1712, and began to reign in 1740. He found himself in possession of a full treasury and a powerful army, which he soon employed in attacking Austria, and conquering from her the province of Silesia (1740-1742). In 1744 he engaged in a second war with Austria, which was terminated in 1745, and left him in possession of Silesia, but with no augmentation of power, though his military renown was raised through Europe. The great struggle of the seven years' war began in 1756. Russia was now attacked by the Austrians, the Russians, the French, the Saxons, and the Swedes, and destruction and dismemberment seemed inevitable. England was her only ally. Prussia went through the struggle, and came out triumphant. When the peace of Hubertsburg was concluded in 1763, Prussia did not cede an inch of land, or pay a dollar of money; and from that time forth she was recognized as one of the five great powers of Europe. From this glorious result she was indebted to her king. It is not merely the military genius of Frederick, as displayed during the sanguinary campaigns of the seven years' war, that demands

our attention, but we cannot help admiring also his moral courage and his indomitable energy under reverses which would have crushed almost any other spirit. Though victorious at Prague, at Rossbach, and Lissa (1757), at Zorndorf (1758), at Leignitz and Torgau (1760), he suffered heavy defeats at Collin (1757), at Hochkirk (1758), at Kunersdorff (1759); and his lieutenants, with the exception of Prince Ferdinand of Brunswick, were generally unsuccessful. But Frederick's firmness never failed him, even when all hope seemed lost. In a period of extreme danger, he wrote to Voltaire (who had advised him to beg mercy from his enemies), 'I am a man, and therefore born to suffer. To the rigour of destiny I oppose my own constancy. Menaced with shipwreck, I will bear the storm; I will be a king in spirit; and I will die, as I have lived, a king.'—After the conclusion of the war, Frederick exerted himself earnestly in relieving the sufferings which so many years of carnage and devastation had brought upon Prussia. In 1772 he deeply disgraced himself, and permanently injured the cause of Order as well as the cause of Freedom throughout the world, by promoting and participating in the first dismemberment of Poland. Frederick died 17th August, 1786. He was fond of the society of literary men, and was himself an author of many works of considerable merit. During his struggles against Austria and France, Frederick was regarded in England and America as the champion of protestantism, and he was called a second Gustavus Adolphus. He ill deserved the title. He had no religious faith whatever; and there are few princes of whom so many mean and selfish traits in private life are recorded as of the celebrated king of Prussia. [E.S.C.]

FROBISHER, SIR MARTIN, was born of humble parents at Doncaster, but the precise date is uncertain. He became early convinced of the possibility of a north-west passage to China; and the hope of gaining undying fame by its discovery continued for fifteen years urging in various quarters the equipment of an expedition. **Dudley**, earl of Warwick, at length patronised him, 1576. He left 8th June with three small vessels and returned 2d October, having reached no farther than Labrador and the coast of Greenland. Impressions of gold were discovered, which led to the despatch of a larger squadron the following year, and the quality of the ore brought home became more favourably reported upon, an important expedition, with miners, soldiers, &c., was sent out, 3 May, 1578; but the fleet was scattered by storm on the coast of Greenland, and obliged to return home early in winter without effecting any settlement. Frobisher afterwards went to the West Indies with Drake, and on the defeat of the Spanish Armada received the honour of knighthood, acknowledgment of his services in the action. He died in the end of the year 1594, from the effects of a carelessly dressed wound received in an attack upon Brest. [J.]

FROILA, the name of three Spanish kings: the *first*, king of Oviedo, reigned 757-768; the *second*, king of Oviedo, and count of Galicia, reigned short time in 875; the *third*, k. of Leon, 923-939.

FROISSART, JOHN, a celebrated French poet and historian, whose Chronicles of France, England, Scotland, Spain, and Brittany, constitute one of the most precious monuments of the middle ages. He was attached to the court of Philippe Hainault, queen of Edward III., and mother of the Black Prince, and after her death to several continental sovereigns. He is supposed to have lived from 1326 to 1400. The best edition of his Chronicles is that of M. Buchoz, 15 vols. 8vo, 1820. There have been several English translations.

FRUITIERS, PH., a Flemish painter, 17th cent.

FRUMENTIUS, SR., the apostle of Ethiopia, consecrated a bishop by Athanasius 331, d. 360.

FRY, MRS. ELIZABETH, whose maiden name was GURNEY, was born in 1780 at Earham, Norfolk, an extensive estate which had been in possession of her paternal ancestry for many centuries. The benevolence of her disposition displayed itself by her habit, while yet a girl, of visiting the poor on her father's property, and forming a school for the education of their children. With this natural benevolence, however, she united an ardent fondness for the gaieties and frivolities of fashionable life, till through the powerful ministrations of William Savery, an American Friend, she was brought to the knowledge and love of the truth as it is in Jesus. Her character from that day was entirely

anged, and she became a genuine and consistent Christian. In 1800 she was married to Joseph Fry, Esq., of London, and consequently settled in the metropolis. There she resumed her early bit of visiting the poor; and although she became the mother of a large family, who were most tenderly loved and assiduously trained, she yet and leisure, by a rigid economy of time, and arrangement of domestic duties, to render her benevolent offices to her poor and suffering fellow-creatures. Every day was she found visiting charity schools, in the houses and lanes of the poor, and in the wards of sick hospitals, till at length by a provincial train of circumstances, she was led to extend her benevolent attentions to the inmates of a prison and a lunatic asylum. The accents of Christian love found entrance into the hearts of these wretched outcasts, and she became the honored instrument of remodelling the discipline and improving the state of our national prisons. At the commencement of her career there was no association of any sort, no separation between male and female prisoners; all criminals, parents and children, men and women, those who were comparatively innocent with the inveterately depraved, were indiscriminately huddled together, and these circumstances many left the prison far more familiar with crime than when they entered it. She required no small resolution and faith to enter such a den of iniquity as a British jail at that period was; but Mrs. Fry attempted it and was successful. Her dignity, and at the same time her feminine gentleness, subdued their ferocity and won their attention; she told them that vice was the cause of all their misery, that if they would return to virtuous habits, they might again be happy, and she proposed rules for their observance, of which they unanimously expressed their approval. Repeating her visit after a brief interval, and finding them equally tractable and submissive, she proceeded with her contemplated measures. She appointed a teacher to those children who had been committed for petty offences, and many of whom were under seven years of age. Even their profligate mothers took an interest in this infant school. Mrs. Fry next devised some employment for the women, by teaching them to sew, and supplying them with work. For the accomplishment of this arduous undertaking she formed a ladies' committee, some of whom made it a sacred duty to attend in the prison daily, so that there was not a moment when the females were not under the superintendence of some proper and efficient guide. A matron was at length appointed to live in the prison, and take the oversight of the female prisoners. But the ladies' committee still continued their attendance, one giving instruction in needlework, another in knitting, while a third read some good religious book, and spoke to them about the guilt and the wages of sin, the duty and superior happiness of a sober, chaste, and religious life. In a few weeks the most astonishing moral revolution was effected within the walls of the prison: not only the language of blasphemy, obscenity, and fiendish discord entirely disappeared, but women of the most abandoned characters were reclaimed to established habits of sobriety, industry, and piety. The public interest was greatly excited by the intelligence. Visitors

of the highest official station and noble rank visited the schools, and the most undoubted testimonies were borne to the excellent principles and efficient working of these benevolent schemes. Mrs. Fry, while she continued her inspection of the prisons, extended her benevolent regards to other classes, such as making provision for female convicts, both during their voyage out, and at their allotted stations. She also visited all the principal jails in Scotland and Ireland, France, Holland, Denmark, and Prussia, and her last scheme of philanthropy was begun with a view to benefit British seamen, particularly to alleviate the miserable state of the coast guard; forming libraries and adopting means for circulating books and tracts in men-of-war ships. These anxious and multifarious labours made serious inroads on the health of this excellent lady. After trying the waters of Bath in the spring of 1844, she returned home no way improved, and gradually sank till she expired at Ramsgate, 11th October. Her death was lamented throughout Europe as a loss to humanity. She was, as she has often been called, 'the female Howard,' and like her prototype, her benevolent exertions were the fruit of a lively and established faith in the gospel of Christ. [R.J.]

FULTON, ROBERT, an American engineer, of Irish parentage. His highest distinction is that of having been the earliest to establish practically the propelling of vessels by steam. Millar's experiments, which proved the practicability of the principle, were made in 1787 in Scotland, but Fulton's boat, which began to navigate the Hudson in 1807, was certainly the first practical demonstration of this application of steam, being five years prior to the success of Henry Bell on the Clyde, and nearly ten years prior to the first attempts on the Thames under Brunel's direction. Fulton was born 1765 in Pennsylvania. He commenced life as a portrait painter in Philadelphia in 1783, but in 1786 he embarked for England, where he worked under his distinguished countryman West, the historical painter, for several years. The fine arts were destined, however, with Fulton to give place to the mechanical, for in 1794 he had been engaged by the duke of Bridgewater in canal projects, had adopted and patented the system of inclined planes as a substitute for locks, had written a treatise on canals, and styled himself civil engineer. He also invented a mill for sawing marble, and patented methods of spinning flax and making ropes.—He had little success as a civil engineer in Britain. In 1796 he went to Paris at the invitation of Mr. Barlow, United States minister, in whose house he resided during seven years. His attention was here chiefly turned to submarine boats as warlike instruments of destruction. The experiments, made first at the expense of the French government, and afterwards for the English government, proved failures. In the course of these experiments, in the year 1803, an experimental steam-boat was built and tried on the Seine. The success was indifferent. But perseverance overcomes all difficulties. Mr. Livingston, the American ambassador in Paris in 1806, supplied Fulton with funds, who returned to America, and in New York launched a steam-boat, which began to navigate the Hudson in 1807. He afterwards built other steam-boats, one of them a frigate, which bore his name. His reputation became established, and his fortune was rapidly increasing, when his patent for steam vessels was disputed, and his opponents were in a considerable degree successful. Though an amiable, social, and liberal man, the anxiety and fretfulness occasioned by the lawsuits about his patent rights, together with his enthusiasm, which led him to expose himself too much while directing his workmen, impaired his constitution, and he died at the early age of forty-nine in 1815. His death occasioned extraordinary demonstrations of national mourning in the United States. [L.D.B.G.]

FUSELI, HENRY, R.A., was born at Zürich 7th February, 1741, and was originally brought up for the church, and entered into holy orders, but for some municipal interference his father thought it necessary for him to leave Zürich for time, and he visited this country in company with Sir Andrew Mitchel in 1763. He here maintained himself by literature, and finally, by the advice of Sir Joshua Reynolds, adopted the profession of painter, and in 1770 set out for Italy: he returned to London in 1779, after an absence of eight years. He first attracted the public attention by his picture of the 'Night-mare,' painted in 1781. This was a fair indication of the unusual bent of Fuseli's fancy, thoroughly developed in his great Milton gallery. He was elected an associate of the Academy in 1788, and an academician in 1791. In 1799 he finished his great Milton gallery forty-seven large pictures, which had occupied him only nine years; of these remarkable compositions, the Lazar House; Satan Starting from the Tomb; Satan Calling up his Legions; the Lubbar Fiend; the Vision of the Deluge; Eve Newly Created, Led to Adam; Sin Pursued by Death; were striking and original works, of great power of conception and treatment, though deficient in all minor technicalities of execution. Fuseli was chosen professor of painting in 1801, but resigned on being appointed to the keepership in 1805; he was, however, re-elected in 1810, and held that office, together with the keepership, until his death, 16th April, 1825. He delivered in all twelve lectures in the Academy, which are among the most valuable contributions to English art literature.—(Knowles, *Life and Writings of Fuseli*, 3 vols. 8vo, 1831; *Wornall's Lectures by the Royal Academicians*, &c.  GAERTNER, JOSEPH, an eminent botanist, born at Calu in the duchy of Wirtemberg in 1712. He died in 1791.—Gaertner studied medicine at the university of Göttingen, and attended lectures of the celebrated Haller. He was much devoted to the pursuit of natural history, and attended the lessons of his illustrious teacher there, and afterwards of the able botanist Adrian Van Rogen Leyden, confirmed him in his choice. After gaining his degree, he travelled into Italy, France, Holland, and England, and published several memoirs upon various subjects connected with marine botany and botany. In 1768 he was instituted professor of botany and natural history at the university of St. Petersburg, where he formed the basis of his great work, upon which his eminent reputation depends. His health obliged him to resign his professorship at the end of two years, and return to his native land. There for eight years he steadily pursued his arduous undertaking, then revisited England and Holland, where Joseph Banks, and the equally celebrated Linnaeus opened to him the collections which they had made, the one in the South Seas, the other in Japan. At length his excellent work was sent to the world, and it will remain a monument to his fame as long as the science of botany continues to be studied. Its object is to illustrate the fruits and seeds of plants, and contains the essential generic characters and particular descriptions of the fruits of 1,000 genera, illustrated by excellent figures drawn by himself. In the definition and anatomical elucidation of the parts of plants, Gaertner excels, and his work has rendered essential service to the science of botany. He has named a genus of plants after him, *Gaertnera*. [W.B.]

He was the pupil of Hayman, but settled in 1758 in Bath, where he practised both portrait painting and landscape with such success, that he was induced to try his fortune in London, whither he removed in 1774; and he was soon accounted both the rival of Sir Joshua Reynolds and Wilson: Sir Joshua himself said of him in his 'Character of Gainsborough,'—'Whether he most excelled in portraits, landscapes, or fancy pictures, it is difficult to determine.' He was one of the original members of the Royal Academy, founded in 1768: he died in London, 2d August, 1788, and was buried in Kew churchyard. —(Edwards, *Anecdotes of Painters*, &c.) [R.N.W.]

 GALENUS, CLAUDIUS, usually called GALEN, a celebrated Greek physician, who flourished in the second century of our era, and whose authority

in the schools of medicine long continued to be equal to that of Aristotle in the schools of philosophy. He was the son of Nicon, an architect and geometrician, who had also cultivated with success various branches of knowledge, including astronomy, arithmetic, and grammar, and was born at Pergamus, a city of Mysia in Asia Minor, in, as is generally believed, A.D. 130, the fifteenth year of the reign of the Roman emperor Adrian. His mother's name is unknown, but she is described as a woman of violent passions and of an ungovernable temper, who, according to the testimony of her son, tormented her husband 'more than Xantippe did Socrates.' He received his medical education in his native city, but upon the death of his father, which happened in the twenty-second year of his age, he visited the medical schools of Smyrna, Corinth, and Alexandria, the latter of which enjoyed at that time a high reputation; and subsequently repaired to Cilicia, Phoenicia, Palestine, Seyros, and Crete. Having spent nine years in these travels, he returned to Pergamus, where he began the practice of his art; and having been appointed by the high priest medical superintendent of the gladiators, it is supposed that in this melancholy occupation he acquired some knowledge of the nature and cure of wounds. His subsequent history is very imperfectly known, but it seems tolerably certain that he visited Rome twice in the course of his life, where he acquired a high character for skill, and where, though bitterly opposed, and, as some think, even persecuted by the Roman physicians, he formed intimate friendships with many of the leading men of the state, including the emperor Marcus Aurelius, who intrusted to his care his son Commodus, then a child of nine years of age, and in a tender state of health. The place and the time of his death are equally unknown. Some respectable authorities, following Suidas, a Byzantine lexicographer, say that he remained at Rome after his second visit, and died there, A.D. 200, in the seventieth year of his age, and in the reign of the emperor Severus; but one of his Arabian commentators has preserved a tradition that he died in the island of Sicily, at the age of eighty-eight, which, as he was born in 130, would give the year 218 as the year of his death.—Galen was a man of great talents and extensive erudition, and a very voluminous writer. His native tongue was Greek, and in that language he wrote, but he understood the Latin, the Ethiopic, and the Persian languages. His works are written for the most part in the Attic dialect, but his style, though eloquent, is diffuse and prolix. Suidas, who is our chief authority on this subject, says that he wrote no less than five hundred books on medicine, and two hundred and fifty on other subjects. Of these the greater part are lost. Of the former not above a half remain, and of the latter only a few fragments; while of his medical treatises forty-five are deemed spurious, and many are considered of doubtful authenticity; yet notwithstanding of these defections, the received works of Galen, with the Latin translations, fill thirteen folio volumes. The best, or at least the most commodious, edition is that of Kühn, in twenty 8vo volumes, begun in 1818, and finished in 1833. [J.M.C.]

GALERIUS, a Roman emp., reigned 305-311.

GALGACUS, chief of the Caledonians, 1st of GALHEGOS, M. DE, a poet and dramatic writer of Portugal, 1597-1665.

GALILEO, GALILEI, a distinguished astronomer, was born at Pisa on the 15th of July, 1564. His father, who was himself a philosopher, had a family of three sons and three daughters, of which Galileo was the eldest. He was distinguished as a child by his skill in constructing toys and pieces of machinery. To these mechanical accomplishments he added a taste for music, drawing, and painting, and so great was his passion for pictures, that he was desirous of following painting as a profession. His father, however, having observed very decided indications of early genius, resolved to send him to the university to study medicine. He accordingly went to Pisa, on the 9th November, 1581, and was placed under the celebrated botanist Cæsalpinus, who then filled the chair of medicine. In studying music and drawing, he found it necessary to acquire some knowledge of geometry, but no sooner had he entered upon Euclid than he conceived a violent passion for mathematics, and devoted himself wholly to its study. While pondering over the treatise of Archimedes *De insiditibus in fluido*, he wrote an essay on the hydrostatic balance, which was the means, through Guidobaldo, of obtaining for him the appointment of lecturer on mathematics in the university of Pisa with a salary of only sixty crowns. Galileo had even in his eighteenth year exhibited a great antipathy to the philosophy of Aristotle; but in the discharge of his new functions at Pisa, he did not scruple to denounce his mechanical doctrines, and expose their errors in the language even of asperity and triumph. On the subject of falling bodies he disproved his doctrine by actual experiments made from the leaning tower of Pisa, and so great was the prejudice which was then roused against him, that he quitted Pisa in 1592, and accepted of the professorship of mathematics in the university of Padua. Galileo was converted to the doctrines of Copernicus by the lectures of Christian Vurstisius, but even after his conversion he taught the Ptolemaic system in compliance with popular feeling.—The reputation of Galileo was now widely extended. Cosmo, grand duke of Tuscany, invited him, in 1609, to resume his original situation at Pisa. Galileo accepted of the invitation on condition that he should receive the title of Philosopher to his Highness, as well as that of mathematician; and while this negotiation was going on he went to pay a visit to a friend at Venice. There he learned, by common report, that a Dutchman had given Prince Maurice an optical instrument which made distant objects appear near the observer. Anxious to know what the instrument was, he discovered the principle of it on his return to Padua, and having placed at the ends of a leaden tube two spectacle-glasses, the one a plano-convex, and the other a plano-concave, the latter being nearest the eye, he obtained a telescope exactly the same as a modern optical glass. This little instrument, which had a magnifying power of only three times, he exhibited at Venice to crowds of the principal citizens, and presented one of them to the senate, who in return gave him his professorship at Padua for life, and raised his salary from 520 to 1000 florins.—At

having made other two telescopes, one magnifying eight, and the other *thirty* times, Galileo applied them to the heavens. With them he discovered the mountains and cavities in the moon, the round discs of the planets, and the four satellites of Jupiter. He counted forty stars in the Pleiades, and found that many of the nebulae were clusters of small stars. The satellites of Jupiter were discovered on the 7th January, 1610, and they were afterwards found by our celebrated countryman, Thomas Harriot, on the 17th October of the same year. In directing his telescope towards Saturn, Galileo observed it to be like three o's, namely, oOo, the middle one being the largest, thus approximating to the discovery of Saturn's ring, afterwards made by Huygens. About the same time he discovered the crescent of Venus, and the spots on the sun, which were seen about six months later by Harriot in England.—In the early part of 1611, Galileo went to Rome, and took with him his best telescope. Here, princes, cardinals, and prelates, hastened to do him honour, and had the gratification of seeing the spots on the sun in the Quirinal gardens.—The discoveries of Galileo were ill received by the followers of Aristotle. Prejudice and ignorance were thus combined against him, and in the controversies into which he was led, he treated his opponents and their opinions with undue ridicule and sarcasm. The philosophers and freethinkers of the day, many of whom had been Galileo's pupils, marshalled themselves on his side, while the Aristotelian sages are supported with all the influence of the church. While these parties were resting on the offensive, Galileo, in 1613, addressed a letter to his friend, the Abbé Castelli, to prove that the scriptures were not intended to teach us science and philosophy, and that it was equally difficult to reconcile the Ptolemaic and the Copernican system with expressions in the Bible. In replying to this letter, Caccini, a Dominican monk, made a personal attack upon Galileo from the pulpit, ridiculing the astronomer and his followers. Roused by his attack, Galileo published a long letter defending his former views, which he dedicated to the grand duchess of Tuscany. Its reasoning was conclusive, and its influence powerful. It was felt to be hopeless to meet his arguments by any other weapons than those of the civil power, and with the resolution to crush the dangerous innovation, his enemies terminated upon appealing to the inquisition. A Dominican monk had paved the way for such a process by denouncing to that body Galileo's letter to Castelli, and Caccini was induced to settle at Rome, in order to embody the evidence against his opponent.—In the year 1617, Galileo went to Rome, cited probably by the inquisition, and was lodged in the palace of the grand duke's ambassador. When summoned before that body for his heretical doctrine, he was charged with maintaining the stability of the sun, and the motion of the earth, and of trying to reconcile this doctrine to scripture; and after inquiring into the truth of these charges on the 25th February, 1615, it was decreed that Galileo should be enjoined by Cardinal Bellarmine to renounce the obnoxious tenets, and to pledge himself, under the pain of imprisonment, neither to teach nor publish them in future. He accordingly appeared before the cardinal, and

having renounced his opinions, and declared that he would neither teach nor defend them, he was dismissed from the bar of the inquisition. Thus successful in their first attempt to put down the truths of science, they conceived the bold plan of condemning the whole system of Copernicus as heretical. In order to frustrate this plan, Galileo remained at Rome, and there is reason to believe that he thus injured his cause. His letter to Castelli, Copernicus's work 'On the Revolutions of the Heavenly Bodies,' and 'Kepler's Epitome of the Copernican System,' were all inserted among the prohibited books. Notwithstanding these acts of hostility, Galileo was graciously received by Pope Paul V., in March, 1616, and even assured that while he occupied the pope's chair, he would protect him against the calumnies of his enemies.—About this time Galileo proposed a method of finding the longitude at sea by the eclipse of Jupiter's satellites, and expected that Philip III. of Spain would employ him to devote his time to the perfection of a method so useful to commerce. He failed, however, in this attempt. But the mortification which it gave him was compensated by the elevation of his friend Urban VIII. to the pontificate. In October, 1623, Galileo went to Rome to offer his congratulations to his holiness. The pope loaded him with presents, promised him a pension for his son, and on the death of Cosmo, recommended him in a special letter to the new grand duke of Tuscany. The cardinals even were propitiated, and in the same spirit his friend Castelli was made mathematician to the pope. Notwithstanding these acts of kindness, however, Galileo cherished the deepest hostility against the church, and his resolution to propagate his opinions seems to have been coeval with the vow by which he renounced them. He resolved to write a work in which the Copernican system should be demonstrated. This work, entitled 'The System of the World, by Galileo Galilei,' was published in 1662, and consists of four dialogues, in which he discusses the Ptolemaic and the Copernican systems. The work is dedicated to Ferdinand, grand duke of Tuscany, and contains an ironical and insulting attack upon the decree of the inquisition. The doctrines which it defended were so widely disseminated, and so eagerly received, that the Church of Rome felt the blow which was thus given to its intellectual supremacy. Under these circumstances the pope did not hesitate in his resolution to punish its author. Galileo was accordingly summoned before the inquisition. Worn out with age and infirmities, he arrived in Rome on the 14th February, 1633, and on the advice of his friends he remained in strict seclusion in the house of the Tuscan ambassador. Early in April, when his examination in person took place, he was removed to the holy office, and lodged in the house of the fiscal of the inquisition, his table being provided by the Tuscan ambassador. It is stated by M. Libri, and generally believed, that in his examination he was put to the torture, and after this had taken place, he was allowed a reasonable time for his defence. Having duly considered his confession and excuses, he was again summoned to the holy office. On the 22d of June he was con-

ducted in a penitential dress to the convent of Minerva, sentence of imprisonment during the pleasure of the inquisition was pronounced upon him, and he was ordered to abjure and curse the heresies he had cherished.—‘The account of the trial and sentence of Galileo,’ says Sir David Brewster, ‘is pregnant with the deepest interest and instruction. Human nature is here drawn in its darkest colouring; and in surveying the melancholy picture, it is difficult to decide whether religion or philosophy has been most degraded. While we witness the presumptuous priest pronouncing infallible the decrees of his own erring judgment, we see the high-minded philosopher abjuring the eternal and immutable truths which he had himself the glory of establishing. In the ignorance and prejudices of the age; in a too literal interpretation of the language of Scripture; in a mistaken respect for errors that have been venerable from their antiquity, and in the peculiar position which Galileo had taken among the avowed enemies of the church, we may find a shadow of an apology, evanescent though it be, for the conduct of the inquisition. But what excuse can we devise for the humiliating abjuration of Galileo? Why did this master spirit of the age—this high priest of the stars—this representative of science—this hoary sage, whose career of glory was near its consummation—why did he reject the crown of martyrdom which he had himself created, and which, plaited with immortal laurels, was about to descend upon his head? If instead of disavowing the laws of nature, and surrendering in his own person the intellectual dignity of his species, he had boldly asserted the truth of his opinions, and confided his character to posterity, and his cause to an all-ruling Providence, he would have strung up the hair-suspended sabre, and disarmed for ever the hostility which threatened to overwhelm him. The philosopher, however, was supported only by philosophy, and in the love of truth he found a miserable substitute for the hopes of the martyr. Galileo cowered under the fear of man, and his submission was the salvation of the church. The sword of the inquisition descended on his prostrate neck, and though its stroke was not physical, yet it fell with a moral influence, fatal to the character of its victim, and to the dignity of science.’—From the prison of the inquisition, where he remained only four days, Galileo was allowed to go to the house of the Tuscan ambassador, and after six months’ residence there, to pass his term of imprisonment in his own house at Arcetri. The happiness of rejoining his family, however, was of short duration. His favourite daughter was seized with an illness of which she died; and having himself fallen into a state of ill health, he was permitted to go to Florence for its recovery in 1638. Here he was debarred from all intercourse with society, and it was only in the presence of an officer of the inquisition that his friend Castelli was permitted to visit him. During his five years’ confinement he composed his ‘Dialogues on Local Motion,’ and in 1636 he discovered the interesting phenomena of the moon’s libration. About this time he lost the use of both his eyes, when he was negotiating with the Dutch government respecting

his method of finding the longitude. At a somewhat later period almost total deafness supervened and having been attacked with fever and palpitation of the heart, he died on the 8th January 1642, in the seventy-eighth year of his age. He was buried in the church of Sta Croce in Florence and a splendid monument erected to his memory in 1737. For further information respecting Galileo see an admirable life of him in the ‘Library of Useful Knowledge’ by the late Mr. Drinkwater Bethum, and another of a more popular kind by Sir David Brewster’s ‘Martyrs of Science.’ A complete edition of his works was published at Milan in 1811, in 11 volumes, under the title ‘Opere di Galileo Galilei Nobile Fiorentino.’ [D.B.]

GALILEO, VINCENT, an Ital. mathe., 16th c. GALITZIN, a Russian statesman, 1633-1713.

GALL, FRANCIS JOSEPH, the founder of the celebrated intellectual or cerebral physiology known as *Phrenology*; born at Tiefenbrunn, in the duchy of Baden, 9th March, 1758; died in Paris in 1828. The incidents of Gall’s life were numerous, and resemble those of many other propounders of new moral and intellectual doctrine in Germany; silenced by one government, hounded for a time by another, he became through compulsion a peripatetic. His longest residence was in Paris, where, in conjunction with his disciple Spurzheim, he published his chief works.—Gall’s fundamental maxims are as follows:—1. Moral qualities and intellectual faculties are innate. 2. The exercise or manifestation of the faculties and qualities depends on our organization. 3. The brain is the organ of all our appetites, sentiments, and faculties. 4. The brain is composed of as many special organs as there are original independent appetites, sentiments, and faculties in human nature. 5. The form of the head or skull which in the main corresponds with the shape of the brain, suggests the means of discovering by observation what are any one’s primary faculties and qualities.—Of these maxims the last two alone are peculiar to Gall: they contain the germs of his new philosophy, and suggested his method of observation. The philosophy, as distinguished from all previous physiologies, represents the brain not as an *organ*, but an *apparatus*; to each convoluted or independent part of which, a distinct mental function belongs; and the task of allocating various functions is reduced to that of eliminating by aid of multitudes of instances, that special cerebral organ, which always coexists and varies with special intellectual power or tendency. In conducting Observation Gall rightly resorted to the method of extreme instances,—seeking the meaning of an organ from the mental accompaniments of its great excess or signal defect. It is impossible in this place to criticise phrenology: its subdivision of the skull however, into a region of the appetites and sentiments, a region of the emotions and moral powers, and a region of the intellectual faculties—these last subdivided into powers of observation and powers of combination,—is striking consistency with all the dynamic phenomena of the human mind as manifested through history. Gall had and still has, many followers and expositors: in Scotland the place of honour is unquestionably occupied by Mr. Combe of Edinburgh. [J.P.]

 GALVANI, LUIGI, born at Bologna 1737, died 1798. A distinguished physician and physiologist. The name of Galvani has become a household word. His great discovery of galvanism appears to have been made about 1790. The story as told is as follows:—The physician had been preparing some frog-soup for his sick wife, and some of these animals were lying stripped of their skins. An assistant had accidentally touched the crural nerves of one of the animals with the point of a scalpel in the neighbourhood of the conductor of an electrical machine, which stood on the table, when the limbs were immediately thrown into convulsions. Galvani soon satisfied himself that this same phenomenon occurred with all animals' muscles, and thus laid the basis of the great science which has been since erected. Galvani fell into a melancholy from the death of his wife, and the loss of his offices from the occupation of Italy by the French, preyed on his mind, although he was ultimately restored to his position a short period before his death in 1798. The account of his discovery of galvanism is contained in his treatise 'De Viribus Electricitatis in motu Musculari Commentarius, 1791.' [R.D.T.]

 GAMA, VASCO DE, a Portuguese gentleman belonging to the household of Emanuel, king of Portugal, was a native of the small seaport town of Sines in that country; the date of his

birth is uncertain, and little is known of the events of his life till he was sent out on a voyage to India, in 1497, ten years after the practicability of the passage by this noted promontory had been established by Diaz. He sailed July 8, with three small vessels, carrying sixty men; and, after encountering tremendous gales in the neighbourhood of the Cape, which so discouraged his men, that he had the utmost difficulty in prevailing on them to persevere, he succeeded in doubling this dreaded headland Nov. 19th, and steered E. and then N.E. along the African coast till he reached Melinda, in lat. 24° S. Here he found Christian merchants from India; guided by one of whom he crossed the Indian ocean to Calicut between May 5th and 28th, 1498, being the first European who navigated these seas. Returning to Lisbon, September, 1499, he was received with distinguished honour by his sovereign, who conferred upon him the title of admiral of the Indian, Persian, and Arabian seas. The expedition of Cabral followed; and in 1502 De Gama was again sent out with a powerful fleet. He returned in the end of the following year laden with rich treasures, and was created count of Vidueyra. For twenty years discovery and conquest in the east had been prosecuted by others, when De Gama, appointed governor of Portuguese India, sailed for Cochin. He died, however, soon after his arrival, December, 1525. 'Married to immortal verse,' the exploits of De Gama have gained a greater celebrity than sober history warrants. Diaz had already robbed the formidable Cape of its terrors—had determined its place with accuracy; and led the way into seas before unknown. Beyond lay the richest countries of the world; their treasures were unfolded by De Gama after a voyage exhibiting great skill and noble daring; and the results of which are only second in importance to the grand discovery of Columbus. GARRICK, DAVID, the most respected actor that ever trod the English boards, was born at Hereford, and was baptized in the church of All-Saints, in that city, 28th February, 1716. His father, Captain Peter Garrick, generally resided at Lichfield, but was about that time on a recruiting party; his mother's maiden name was Clough, daughter to one of the vicars in Lichfield cathedral. David at ten years of age was entered of the grammar school at Lichfield. At eleven he formed the project of getting a play acted by young gentlemen and ladies. The trial was made with 'The Recruiting Officer.' One of his

sisters played the part of the chambermaid; he himself undertook *Serjeant Kite*. The after celebrated Doctor, Samuel Johnson, his boy-friend, was applied to for the prologue, which, however, he neglected to write. Not long after Garrick went to Lisbon, at the request of an uncle, a wine merchant there, and was acquainted with the unfortunate Duke d' Aveixo. On his return to England he, in 1736, became one of Johnson's scholars at Lichfield; but the latter growing tired of teaching the classics to two or three pupils, resolved on trying his fortune in London, and thither Garrick accompanied him. Here the latter lost no time in getting introduced to theatrical managers, and in 1741 obtaining an engagement at Ipswich, met with much success, under the assumed name of Lyddal. His first effort was in the pathetic character of *Aboan*, in 'Oroonoko;' but he matriculated in all kinds of stage business, condescending even to harlequin. In the winter of the same year Garrick ventured on the London stage. On the 19th October, 1741, he made his *débüt* in Richard the Third at the playhouse in Goodman's Fields, and with his novel and natural style, startled the critics and the reigning actors. Quin, in particular, was much annoyed, saying—'If the young fellow was right, he and the rest of the players had been all wrong.' Being told that Goodman's Fields theatre was crowded every night to see the new actor, he said—'That Garrick was a new religion; Whitfield was followed for a time; but they would all come to church again.' Whereupon Garrick wrote this epigram:—

'Pope Quin, who damns all churches but his own,
 Complains that heresy infects the town,
 That Whitfield-Garrick has misled the age,
 And taints the sound religion of the stage:
 Schism, he cries, has turn'd the nation's brain;
 But eyes will open, and to church again!
 Thou great infallible, forbear to roar,
 Thy bulls and errors are revered no more;
 When doctrines meet with gen'ral approbation,
 It is not heresy, but reformation.'

After a visit to Dublin, Garrick returned to London, and acted at Drury, having entered into an engagement with Fleetwood, the manager, for five hundred pounds a-year. At this theatre he proved equally great in *Abel Druggier* and *Hamlet*. He was also wonderful in *Lear*. But in consequence of Fleetwood's farming the theatre to his treasurer, he soon seceded from the establishment. On his return to the stage he was involved in a controversy with Macklin; and soon after was engaged for Covent Garden. Ultimately he was solicited to purchase the moiety of Drury Lane patent, which he did for eight thousand pounds. When Garrick retired from the stage in 1776, this same patent he sold for thirty-five thousand pounds; a fact which of itself is sufficient warrant of his excellent management. One merit claimed for him is the restoration of 'Macbeth,' and other Shaksperian dramas, with a closer adherence to the text than was then usual. The chief complaint against him was his conduct towards living authors; and it must be confessed, that in this was confirmed that usurpation of the poet's right by the actor from which the stage is hardly yet emerging. Davies, his biographer, observes on this point that,—'The time bestowed in rehearsing the piece, and the expense of new scenes

resses, music, and other decorations, make it often very ineligible to a director of a theatre to accept a new play; especially when it is considered that the revival of a good old play will answer his end of profit, and reputation too, perhaps as well. The actor-manager, as the representative and inheritor of the wealth of all dead poets, proves too powerful a competitor for the living dramatist. In this way tragic actors find Shakspeare a tower of strength, and are by his means enabled to suppress the proofs of living genius. Garrick had strong reasons for the Stratford jubilee in 1769, by which he gained increased celebrity and power. In his pageant he afterwards transferred to the stage, where it ran for one hundred nights. Mr. Garrick was also the founder of the Drury Lane Fund for decayed performers. A thoroughly successful man in life, he was equally prudent and benevolent. He lived generously, kept the best society, made lavish gifts to his friends and neighbours, and basked, till his death, in the sun of popular favour. He died 20th January, 1779, and was magnificently interred in Westminster Abbey, being attended to his grave by persons illustrious for their genius and rank. In the opinion of his admirers he was the greatest actor that ever graced the stage. He was certainly the most exemplary as a man and moralist; and preserved, if he did not originate, the dignity of his profession. He was also the author of several dramatic pieces, some of which display considerable humour, and of many brief poems, prologues, and epilogues, abounding in wit, and in allusions to the manners of his time. GASSENDI, PIERRE, born 22d January, 1592, near Digne; died in Paris 24th October, 1655: in the words of Tennemann, the most learned among the philosophers, and the ablest philosopher among the learned, of the seventeenth century. In speculative thinking, Gassendi represented the

Sensational School, of which he may be considered the Founder in modern times: as such, he made stand against the *Meditations* of Des Cartes. In the eager polemic between these remarkable men, the critical question of Sensationalism, almost in the form in which it still presents itself, was fairly raised: it must be conceded that the temper and moderation lay with Gassendi, although, in the estimation of the writer of this notice, the weight of argument belonged to his illustrious opponent. During the disputation, Gassendi had the merit of insisting that every mental conception of *Principle*, is necessarily preceded by the *fact of an Experience*; an assertion by no means sufficient to establish his philosophy, but remarkable as having first given expression to a maxim now held alike by Sensationalists and Idealists,—that in Sensation is the beginning or the occasion of all knowledge; a maxim of which Des Cartes himself, perhaps, saw enough to render unjustifiable Locke's subsequent singular misrepresentation of the doctrine of innate ideas. This proposition granted, however, it in nowise follows, as Gassendi contended, that the content of sensation is the measure of human knowledge; or that an Absolute and Necessary Truth is a mere generalization. Rational Psychology, according to Des Cartes, contradicts this: the attributes of universality and necessity cannot attach to simple generalizations; and these attributes belong to many of our ideas. It is hardly requisite to say that the dispute thus raised, exists still: nay, the student desirous to master it, will scarcely find better instructors than Des Cartes and Gassendi.—Gassendi was one of our most distinguished reformers, at a period when many great minds pushed forward the work of reform,—claiming independence for thought. It may be forgiven, perhaps, that in his early work against the authority of Aristotle, he was not careful to separate the true doctrines of the immortal Stagyrte, from wretched and sapless formulæ deduced from him by the Schoolmen; or that in his youthful zeal, he failed to approach with rightful respect, that great Shade to which so many ages have done willing reverence. His attack on Aristotle is the weakest of his writings, and cannot be acquitted of rashness: nevertheless, he was not wanting in respect for antiquity,—witness his treatment of *Epicurus*. His life of this philosopher is one of the best and most appreciatory memoirs, among the many that have been given of him: he wrote *con amore*. The Atomic Philosophy suited Gassendi's predilections; and one respects the just ardour with which he vindicates the character of his master, and clears his doctrines from vulgar misapprehension. Gassendi's attachment to physical inquiries was strong: although not an original discoverer, the labours of no man of that day contributed more to diffuse right principles regarding the method of physical inquiry. In this department, his superiority to the Cartesians cannot be questioned: Des Cartes himself knew too little of that sphere of pure Induction, within which what we term Law or general Truths, can be nothing other than *generalizations*. As might have been expected he adopted the Copernican system of the Universe, cautiously but intelligently; and greatly

contributed to bring about a right understanding of its significance. His life of Copernicus is a composition of much interest; although probably inferior to his life of Tycho. He was a friend and correspondent of Galileo; he avowed himself the disciple of Bacon; and unquestionably his writings prepared the way for those of Locke.—Gas-sendi's personal character was of the highest order; gentle, serene, and dignified; modest, notwithstanding his wide repute; impartial and forbearing. As a pious and faithful ecclesiastic he achieved a place in the hearts of the mountaineers amidst whom he lived, which long after years did not efface: they raised a statue to his memory.—The works of this industrious thinker and voluminous writer have appeared in various forms. The *Sieur de Montmort*, to whom he bequeathed the duty, published a complete edition of them at Lyons, in 6 vols. folio, in 1658: another edition appeared at Florence in 1727, edited by Averanius. GAY, JOHN, who was born in 1688, and died in 1782, was first a silk-weaver's shopman, but became an author, and the easy dependent of great and great people. He had much note in his day as a pastoral and mock-heroic poet; and his name is still preserved by his notorious 'Beggars' Opera,' and his fluent and agreeable 'Fables.' Perhaps he deserves remembrance better for his ballads, 'Black-Eyed Susan,' and 'Twas when the Seas were Roaring.' [W.S.]

GAY, J. J. PASCAL, a Fr. architect, 1775-1832.

GAY LUSSAC, N. F., one of the most distinguished chemists of modern times, is described by all his associates as equally characterized by the amiability of his disposition, his kindness to the student, and his disinterested and generous nature. Brought up in the laboratory of Berthollet, he subsequently showed that he had eminently benefited by the instructions of such a master in the science. His first important discovery was that in 1808 of the union of gases by volume forming an additional argument in favour of the atomic theory of Dalton in 1804, of the union of bodies by definite weights in the formation of chemical compounds. He took an active part in the investigation of iodine in 1813, and in 1815 he made the important discovery of cyanogen, which although a compound gas performs all the functions of a simple body. Gay Lussac was possessed of great powers of practical application; it is only necessary to refer to his alcolometer, to his process of chlorimetry, and to his very convenient method of assay of silver by the wet way, which has been familiar for above twenty years to those who were fortunate enough to visit the Parisian mint, as ably conducted under the auspices of the subject of our notice. His long and useful life terminated on the 9th May, 1850, after several months' illness having been a member of the Academy from 1806. [R.D.T.]

GEMIGNANO, an Italian painter, 1490-1530.
GEMINIANI, FRANCESCO, one of the greatest violinists of his age, was born at Lucca about the year 1666. He received his first lessons on the instrument from Carlo Ambrogio Lonati of Milan, and the foundation of his musical knowledge was laid by Alessandro Scarlatti. His last master on the violin was Corelli. Geminiani composed three sets of concertos, a work on Harmony, two treatises on the Art of Playing the Violin, and several pieces for the harpsichord. In the year 1714 he

came to London, and soon established his reputation as a great artist. Geminiani seldom played in public, and the money he received for his compositions, the fees from pupils, and the presents he received from the noble and the wealthy when he could be prevailed upon to play at their houses, were the chief means from which he derived his living. Even with such sources of emoluments he might have made a fortune, but he was improvident. Geminiani died at Dublin in 1762. [J.M.]

GENGHIS KHAN, the founder of the great Mogul empire, and of the dynasty now tottering on the throne of China, was the son of a simple chief, and was born in Tartary in 1164. He succeeded to his father's authority when only fourteen years of age, and soon afterwards, being compelled to take up arms in self-defence, struck terror into his opponents by his military talents and ferocious disposition. In 1205 he was crowned grand khan of all the Moguls and Tartars in a ceremony of great state, in the course of which he was hailed lord of the four quarters of the world, in a manner well calculated to excite the enthusiasm of his followers. In 1213 he was master of Pekin and all Northern China, and a few years subsequently had subjugated Persia and the most fertile regions of Asia, dying in the heat of his conquests 1227. His grandson, in 1255, seized on Bagdad, and completed the extirpation of Mohammedanism begun by his ancestor. [E.R.]
GENLIS, STEPHANIE, Countess De, was a native of Burgundy, and born in 1746. Becoming well known in society after her marriage had given her aristocratic rank, she was chosen as *gouvernante* to the children of the notorious Duke of Orleans; and by him she had a daughter, who was married, in 1792, to the unfortunate Lord Edward Fitzgerald. She died, after a wandering life, in 1830, when her pupil, Louis Philippe, had just become king of the French. Her writings were numerous and miscellaneous; the principal of them being novels, which possess little merit either of style or of matter, while they teach, with an affectation of fine sentiment, a morality very slippery and accommodating. Her best and least exceptionable works are her stories and dramas for youth; such as 'Adèle and Theodore,' 'The Tales of the Castle,' and 'The Theatre of Education.' [W.S.]
GENNADIUS, the name of two patriarchs of Constantinople, the *first* of whom ruled the church, 458-471, and the *second* after the capture of the city by the Turks, 1458-1460. The latter is author of several theological works.

His brother, **CLAUDE JOSEPH**, a naturalist and physiological author, 1685-1752. **STEPHEN LOUIS**, son of Stephen Francis, a dist. naturalist, 1725-1810.

GEOFFROY ST. HILAIRE, ETIENNE, a celebrated zoologist, was born at Etampes in 1772. He died in 1844.—He was a pupil of the great mineralogist Haüy, and was appointed through

his recommendation assistant-keeper and demonstrator of the museum of natural history at the Garden of Plants. A few months afterwards he became professor of zoology there, and from that time forwards he devoted himself with great zeal to that particular branch of natural history. In 1798 he was appointed one of the scientific commission which accompanied the French army to Egypt, and it is to his firmness France owes the possession of the papers and drawings made in that country by himself and colleagues. Upon his return from Egypt he resumed his situation at the Garden of Plants; but in 1810 he was again despatched by government on a mission to Portugal. Here he collected a vast quantity of minerals and animals from the museums of that country, and succeeded in transporting them to Paris. Geoffroy is the author of many important memoirs and valuable works upon zoology. The most important, perhaps, of all is his 'Philosophie Anatomique,' the chief object of which is to demonstrate throughout the animal kingdom a uniform plan of organization, recognizable by the existence not of the same organs, but of the materials of the same organs in all. In connection with Cuvier, Geoffroy has contributed much to the progress of zoology in Europe. They created a school in which the study assumed a truly scientific character, and one which will long continue to exercise a salutary influence over the labours of succeeding generations. [W.B.]

GHEZZI, SEBASTIANO, a scholar of Guercino distinguished as an architect, painter, and sculp.

died about 1650. His son, JOSEPH, a painter, 1644-1720. The son of the latter, PETER LEO, a painter and engraver, 1674-1755.

GHIBERTI, LORENZO, a celebrated Florentine sculptor and goldsmith, was born in 1381. In 1400 he left Florence for fear of the plague, but returned shortly afterwards, when he received notice of the great competition that was to take place on the occasion of completing the bronze doors of the Baptistery of St. John. The centre door opposite to the west end of the cathedral had been already put up by Andrea Pisano, the other two gates were for the two sides.—The commission for these two new gates was obtained by Lorenzo Ghiberti, then a young man only twenty-two years of age: the contract was given to Ghiberti and his father, and other assistants, on the 11th of November, 1403, and the first gates, representing the life of Christ, were put up in the place of those by Andrea Pisano, in April, 1424; and the third gates, commenced on 2d January, 1425, and the histories from the Old Testament, were completed until 16th June, 1452, when they were gilded and put up in the place of Ghiberti's gates, which were removed to the other side, opposite to those of Andrea Pisano. These great works, of the last of which entire casts may be seen at Marlborough House, caused a new epoch in monumental art, being remarkable for their bold and accurate imitation in the detail, for their skill in modelling of the figure, and masterly symmetrical grouping of the whole; on a scale of magnificence, and technical completeness, altogether unprecedented in modern art. During the next forty years that Ghiberti and his assistants, of whom his own son Vittorio was one of the principal, were occupied on these complicated works, he executed also many others, monumental and ecclesiastical, which must explain the apparently long delay in the completion of the gates. Ghiberti died at Florence in 1455.—(Vasari, *Vite Pittori*, &c., Florence 1848; Patch, *La Porta Principale del Battistero di San Giovanni*, &c., Florence, 1773.) [R.N.W.]

GIACCHI, a Mahomedan *savant*, died 764.

GIACCHI, a Mahomedan *savant*, died 840.

GIAMBERTI, F., an Ital. architect, 15th cent.

GIANNONE, P., a Neapolitan hist., 1676-1748.

GIANNOTTI, D., a Venetian an., 1494-1563.

GIARDINI, FELICE, who has been called the father, if not the founder, of the violin school in Italy, was born at Turin in 1716, and was entered a chorister at the *Duomo* in Milan, where he learned singing, the harpsichord, and composition, under Paladini. He afterwards adopted the violin, and studied under Lorenzo Somis, one of Corelli's most famous followers. After having visited the principal cities of Italy, he travelled over Germany, and at length reached London in the year 1750, where he soon reached the top of his profession, and where he filled the highest professional posts open to the musical artist. It is said that

when he first appeared at the Haymarket theatre, and played a solo on the violin, 'the applause was long, loud, and furious, and such as nothing but that which Garrick called forth had ever equalled.' In the year 1756, he in company with Mignotti, became the manager of the Italian Opera, and though he composed several operas, and acquired much fame, his undertaking was very unsuccessful. Giardini in the year 1763 retired from the management, after having lost a large sum of money. In 1784 Giardini went to Italy, where he remained five years. In 1789 he came back to England, but was not so successful as during his first residence. In 1793 he went to Russia. His public performances at Moscow and St. Petersburg failed to produce the effect of his earlier efforts. He died in the latter city in poverty in the year 1796. [J.M.]

GIATTINI, J. B., an Italian poet, 1600-1672.

GIB, ADAM, a Scotch divine, 1713-1788.

GIBBES, J. A., a French physician, 1616-77.

GIBBON, EDWARD, was born at Putney in Surrey, in 1737. He was the only child who survived infancy, of a gentleman well connected and tolerably wealthy. Feeble health made his school days to be profitable in nothing but the acquisition of miscellaneous and undigested knowledge; and, being sent to Oxford too young and quite unprepared, he spent fourteen months there in alternations of irregular study and extreme idleness. At the end of this time, being a little more than sixteen years old, he embraced the Roman Catholic faith, and formally announced his conversion to his father. He was immediately placed under the care of a Calvinist minister at Lausanne, whose instructions led him in a few months back to protestantism. The five years he spent at Lausanne, closing in 1758, when he was just of age, formed the real commencement of his education; and, at their close, he was not only a ripe scholar in French and Latin, but possessed of an extraordinary amount of historical and other information. He found leisure, however, for falling in love, unsuccessfully, with a young lady, who afterwards became the wife of M. Necker and the mother of Madame De Stael.—For several years after Gibbon's return to England, he lived chiefly at his father's house in Hampshire; and, failing in attempts to obtain diplomatic employment, he accepted a militia commission, attended zealously to his duties, and rose to be lieutenant-colonel. But the studious habits and literary ambition which he had acquired, never flagged. In 1761, he published, in French, a short essay 'On the Study of Literature.' He extended his acquaintance with English authors, and, beginning to learn Greek thoroughly, pursued the study zealously, when, in 1763, he was allowed again to visit the continent. In Rome, next year, he conceived the design of his great historical work. Returning home in 1765, he passed some years unsatisfactorily to himself, but not without much improvement both in knowledge and in skill of writing. In 1774, he entered the House of Commons, in which he sat for eight sessions; and he was rewarded for his silent votes in favour of Lord North's administration, by holding for three years a seat at the board of trade. In 1770, he published, in answer to Warburton, his spirited Dissertation on the

Sixth Book of the *Æneid*. In the same year, the death of his father placed him in possession of a fortune, which, though embarrassed, he was able to extricate so far that it afforded a handsome competence, and enabled him to devote himself exclusively to study and composition.—In 1776, he published the first volume of 'The History of the Decline and Fall of the Roman Empire,' the first edition of which was sold in a few days, and was rapidly followed by others. The second and third volumes, appearing in 1781, brought down the narrative to the Fall of the Western Empire; and for a while the author hesitated whether he should not here allow the work to drop. He resumed the design, however, in 1783, when he fixed his abode at Lausanne. He has recorded, in an eloquent passage of his *Memoirs*, the mixed emotions with which, in a moonlight night of June, 1787, in a summer-house in his garden, he completed his great undertaking. Its last three volumes were published next year, the author visiting London to superintend the press, but returning in a few months to Lausanne. There he remained till, in 1793, he was called to England to console his friend Lord Sheffield on the death of his wife. His health was now very infirm; and he laboured under dropsy. He died in London in January, 1794.—The volumes called his 'Miscellaneous Works,' contain, besides reprints of his minor writings, and several essays not previously printed, an interesting collection of his letters, and an instructive autobiography. Some of these pieces show all that various erudition, and that command of apt and powerful language, of which his chief work is so remarkable a monument. His exotic diction, and the pompous structure of his style, are open to strong exceptions; yet he is one of the most strikingly eloquent writers in our language. The historical value of his 'Decline and Fall' is very great; and the extraordinary union of excellencies, of vast variety with general correctness of learning, of good judgment with vigour of narrative and description, deepens the regret with which we contemplate the sceptical taint that is diffused so steadily through the whole. [W.S.]

GIBBON, JOHN, an ancestor of the celebrated historian, known as a writer on heraldry, born 1629, died about 1700.

GIBBONS, GRINLING, a celebrated carver in wood, was born at Rotterdam, 4th April, 1648, and appears to have visited this country in 1667, the year after the great fire. Evelyn, who calls him the incomparable Gibbons, introduced him to King Charles II., and also to Sir Christopher Wren, who employed him extensively in the decorations of St. Paul's. Gibbons received a place in the Board of Works, and was much employed at Windsor. In 1714 he was appointed master carver in wood to George I., with a salary of eightpence a-day. He died in London, 3d August, 1721.—There are many fine specimens of Gibbons's carvings at Hampton Court, and at Petworth, the state room there being considered by some his masterpiece: also at Houghton; and there are some specimens still in St. James's Church, London. His works are in very high relief, and the details, fruit, flowers, game, &c., generally grouped in great clusters or festoons, and though from the proper distance they appear to be of extreme deli-

cacy, are of a solid character, and very judiciously disposed. He made a taste for carvings of class fashionable, and had several skilful scholars and imitators, as Selden, Watson, Dievot, Laurens; much work attributed to Gibbons doubtless executed by some one of these men (Walpole, *Anecdotes of Painters*, &c., ed. Worn Bohn, 1849.) [R.N.]

GIBBONS, ORLANDO, Mus. Doc., who regarded as one of the greatest English musicians was born at Cambridge, in 1583. He was twenty-one years of age when he was appointed organist to the chapel royal, and in 1622, on recommendation of the learned antiquary Camden who was his personal friend, the University of Oxford conferred upon him their degree of Doctor of Music. Some years afterwards, while he was at Canterbury for the purpose of conducting musical performances at the marriage of Charles I., he fell ill of small-pox and died. He was buried in the cathedral of Canterbury, where his tomb caused a simple and elegant marble monument to be erected to his memory. His first publications were madrigals in four parts for voices and viols, but the best of his works are his church services and anthems, many of which are still extant. 'The compositions of Gibbons are for the most part,' says one of his biographers, 'truly excellent and the study of them cannot be too strongly commended. The characteristics of his music are fine harmony, unaffected simplicity, and an almost unexampled grandeur.' Another writer says, 'in a lapse of upwards of two hundred years, his compositions seem to have lost none of their freshness and are still, and likely to continue, the admiration of all real judges of what is excellent in music.' He left a son, CHRISTOPHER, who was also a musician but who inherited only a very meagre share of his father's genius. Orlando Gibbons was survived by two brothers, EDWARD, who was organist of Bath, and master of the celebrated Matthew Locke, and ELLIS, organist of Salisbury. [J.]

GIFFORD, R., an English divine, 1725-1800.

GIFFORD, WILLIAM, the son of a poor and

ated tradesman, was born in Devonshire in 1756. coming in childhood a destitute orphan, he was successively a cabin-boy and a shoemaker's apprentice: but a benevolent patron put him to school; and, finding his way to Oxford, he there secured aristocratic patronage, and, attaching himself to the Tory party, proved one of its most effective literary advocates. In 1798, he became editor of the *Antijacobin*; and for about sixteen years, in 1809, he edited the *Quarterly Review*. He was eminently qualified for such offices, both by his aptness and force of writing, his variety of information, and his readiness and unhesitating fluency of satire. Not far from the close of the century appeared his two satirical poems, 'The Mæviad' and 'The Mæviad,' and his vigorous and spirited translation of Juvenal was published in 1822. His best services to letters were his editions of *Old English Dramatists*. His 'Massinger' appeared in 1808; his 'Ben Jonson,' the most valuable of the series, in 1816; and his editions of *Shirley*, completed by other hands, were published in 1827 and 1833. He died in the month of 1826, bequeathing the bulk of his property to the son of his early benefactor. [W.S.]

GIL, FATHER, a Spanish patriot, dist. in 1808. GILBERT, DAVIES, born at St. Erth in Cornwall 1767, known as an antiquarian, and successor of Sir Humphry Davy as president of the Royal Society, author of 'A Plain Statement of the Bulwark Question,' and many scientific papers. Gil was M.P. for Bodmin from 1806-32, d. 1840. GILBERT, F. H., a Fr. veterinarian, 1755-1800. GILBERT, GAB., a French poet, died 1680. GILBERT, SIR HUMPHREY, half-brother of Walter Raleigh, was a man of ardent temper and chivalrous character, who engaged in geographical discovery from the love of fame and adventure. Under patent from Queen Elizabeth, sailed, in 1583, with five vessels and 260 men, to take possession of the northern parts of America. Newfoundland, whose fisheries were already much frequented by French, Spanish, and Portuguese ships, he succeeded in establishing a colony, and thus secured the influence of England in those parts, the title being founded upon the discovery by Sebastian Cabot. He ventured across the Atlantic, on his homeward voyage, in a vessel of only ten tons; but after passing the Azores he perished during the night in a storm, with all on board his little barge. He was seen the evening before, struggling with the waves, in the Golden Hind (see *DRAKE*), which he accompanied him from the coast of Virginia, in which he had been urged to take his passage home. He has been called 'the father of western civilization.' [J.B.]

GIOIA, FLAVIO, an Italian navigator, 14th ct.

GIOJA, M., an Italian economist, 1767-1829.
GIORDANI, GUISEFFE, sometimes called **GIORDANELLO**, whose songs at one time enjoyed the highest popularity in Britain, was born in Italy about the year 1750. He came to England very young, and soon had all his time filled up in giving lessons in music. In 1779 he entered into partnership with Leoni the singer, and they jointly became lessees of a theatre in Dublin, Giordani as composer, and his partner as singer. This speculation proved a complete failure, and in four years they were bankrupt. Giordani after this continued to reside in Dublin, where he had several pupils of distinction, and where he married the daughter of Tate Wilkinson. He composed two operas, 'Antigone' and 'Artaserse,' for the Italian Opera in England, and one for the English stage. He died in Dublin in 1789. [J.M.]

GIORGI, MARINO, a Venetian doge, succeeded and died 1311.

GIORGIONE, the name by which **GIORGIO BARBARELLI** is commonly known. He was born near Castelfranco in 1477, and was the fellow-pupil of Titian with Giovanni Bellini at Venice. He became a great colourist, and his pictures are further distinguished for objective truth of representation and effective light and shade. His pictures are very scarce: they consist chiefly of portraits. He died at Venice in 1511, at the early age of thirty-three.—(Vasari, *Vite de' Pittori*, &c.; Ridolfi, *Maraviglie dell' Arte*, &c.) [R.N.W.]

GIOSIPPINO, an Italian painter, died 1640.
GIOTTINO, TH., an Ital. painter, 1324-1356.
GIOTTO DI BONDONE was born at Vespignano in 1276; he was the pupil of Cimabue, and appears to have owed the development of his extraordinary faculties almost wholly to that painter, who in one of his walks near Florence, saw Giotto, then a shepherd boy, sketching one of his flock on the ground, and perceived so much native talent in the attempt, that he persuaded the boy's parents to let him take him with him to Florence, and make a painter of him. Florence dates its preponderance in the history of Tuscan painting from the time of Giotto; his works mark the era of the first great epoch of the art in modern times: the rigid traditional forms of the Byzantine school were finally laid aside for nature; the beautiful now supplanting the hideous as the fundamental element of the canons of art.—Giotto was painter, sculptor, architect, and mosaic worker; he enriched many cities in Italy with his works, (chiefly in fresco,) especially Florence, Rome, Naples, Padua, and Assisi; and by his introduction of individuality of treatment through the careful study of nature, established legitimate portrait. The frescoes of the Arena chapel, Padua, are in course of publication by the Arundel Society. Giotto was in Rome in 1298, he was at Avignon for some years afterwards, between 1305 and 1314; in 1316 he returned to Florence, in 1327 he visited

Naples, and he died at Florence in 1336.—(Va. *Vite de' Pittori*, &c., ed. Florence, 1846.) [R.N.]

LOVER, THOS., a wr. on heraldry, 1543-88.

LUCK, CHRISTOPH, was born in Weidenau in the upper Palatinate, in the year 1714, and his father held the situation of forester to

the Prince Lobkowitz. Early in childhood he went with his family to Bohemia, where his father died and left him without education, and in circumstances little removed from absolute penury. Gluck was, however, gifted with a mind of no ordinary power, and he soon made his proficiency in music the means of placing himself above want. He went from town to town as an itinerant musician until he arrived at Vienna, where he met with a nobleman who became his patron, and in whose suite the young Gluck went to Italy, and became the pupil of the renowned Padre Martini. Here he was put upon the establishment of Prince Melzi as composer, and before he returned to Germany he produced several successful operas. His fame had now spread so far beyond the city of Milan, that in 1745 he was invited by the directors of the king's theatre to come to London, where he was to hold the situation of composer to that establishment. His success in London was not very decided. While in this situation he produced his 'La Caduta dei Giganti,' and 'Artamene,' operas, and 'Piramo e Tisbe,' a *pasticchio* consisting of selections from all his previous works. After this Gluck went for a short time to Copenhagen, from whence he was invited to return to Italy, where he produced his 'Clemenza di Tito,' 'Antigonus,' 'Clelia,' 'Baucis e Philemon,' and 'Aristideo,' with varied success. He then went to Vienna, where in connection with Signor Calzabigi, an ingenious poet, he projected a new style of operatic composition, and in 1764 produced his 'Orfeo' with the most complete success, 'Helen of Paris,' and 'Alceste,' speedily following. Gluck now visited the principal cities of Italy, and when at Naples was engaged to compose two operas. On his return to Vienna he composed and produced his 'Iphigenia in Aulide,' the *libretto* of which was an adaptation of the text of Racine's Iphigenia. The fame of this piece reached Paris, whither Gluck was invited by the Academie Royale. On his arrival at Paris, Marie Antoinette immediately became his pupil and patron, and at her bidding the Iphigenia was produced on the 19th of April, 1776, under his own direction, and with the most triumphant success, notwithstanding the prejudice which had been fostered against it before its performance. Immediately after this Paris was divided into two bodies, Gluckistes and Piccinistes, the latter party being the devoted admirers of Piccini the Italian composer, who was then rising into eminence; but though the musical war raged for a long time, nevertheless, when the termination of hostilities arrived the triumph of Gluck was complete. Having composed two more operas, Gluck returned to Vienna in 1779, and never after quitted that city. In 1784 he was attacked by paralysis, under which he suffered until 1787, when he died, leaving a fortune of £30,000, the fruits of his talents and industry. The writer of the sketch of his life in the Musical Library says—'The Chevalier Gluck—for he had received an order of knighthood—was a man of powerful mind, by means of which he supplied the deficiencies of early education. He read much, associated with literary and scientific persons, and reflected deeply; hence, all his works display an intellectuality not often found in the productions of the lyric stage, which have preserved them, and will continue to preserve them, while

nearly all the compositions of his contemporaries and rivals have sunk into oblivion.' [J.M.]

GODESCALCUS, or GOTTESCHALCUS, was by birth a Saxon, and was educated in a monastery at Fulda. On arriving at manhood, he struggled hard against a monastic life, but Rabanus Maurus his future persecutor interfered, the influence of Louis the emperor was invoked against him, and his early and unconscious consecration as a monk by his father, was held to be an inviolable bond. On his subsequent removal to Orbais in the diocese of Soissons he was ordained a presbyter, and we find him soon after travelling in Italy and Dalmatia. He had already in retirement drunk deep into the spirit of Augustine, and he reproduced in a prominent form his views on grace and predestination, especially in a discussion before Notting, bishop of Verona. But violent opposition was stirred up against him, and his tenets were condemned by the Synod of Mentz in A.D. 847. His fierce antagonist Rabanus Maurus then sent him to Hincmar archbishop of Rheims, to whose see the so-called heretic belonged. Hincmar immediately arraigned him before the Synod of Chiersey in 849, degraded him, scourged him

severely, and incarcerated him in the monastery of Hautevilliers in the diocese of Rheims, where twenty-one years of confinement the noble confessor died. In his last illness the communion refused him, and his corpse was denied Christian burial. The controversy raised by Gotteschalcus agitated the Romish Church for many years. Prior to his polemical appearances, Gotteschalcus for the brilliancy of his scholarship, had been named Fulgentius. That his enemies carried his opinions is plain, but it is no less true that naked and extreme statements were liable to misconception, and unnecessarily stirred up prejudice. His long and shameful imprisonment never weakened in the least his sincere attachment to the Augustinian theology.

[Armour of Godfrey of Bouillon.]

GODFREY OF BOUILLON, duke of Lorraine, first Christian king of Jerusalem, was born at Bèzy, near Nivelle. He served while young in the army of the emperor Henry IV.; and, when near the close of the eleventh century all western Europe was roused to rescue of the Holy Land from the infidels, the name of Godfrey was high throughout Christendom for piety and moral excellence, as well as for knighthood and prowess. He entered fervently into the movement of his age, and was confessedly the first in rank and worth among the chiefs of the crusade. He not only signalized himself by valor among the valorous, and by enthusiasm among the enthusiastic, but he showed also disinterestedness, probity, skill, and prudence, which were of a higher and rarer order. He maintained the most complete discipline among his division of the Christian army, which he brought safely to the appointed muster-place beneath the walls of Constantinople in the winter of 1096. By his sagacity and foresight, he prevented hostilities breaking out between the host of the crusaders and the Greek emperor Alexius Comnenus; and, in the spring of 1099, Godfrey led the Frankish nations into Asia Minor to the siege of the capital of the Turkish sultan, Nice. This city was captured after a siege of three months, in which the personal valour of Godfrey, as well as his generalship, was frequently displayed.

was tall, well-proportioned, and of such remarkable strength and dexterity in the use of his weapons, that he is said in more than one encounter to have cloven his foe by a single sword-stroke from skull to centre. After Nice was captured, the crusaders marched forward, and defeated a Turkish army in the great battle of Dorylæum. They reached Antioch, in Syria, late in the winter of 1097. The city was captured after an obstinate resistance; and the weakened army of the victors was in turn besieged in its walls by an innumerable host of the Mahomedans. After enduring much suffering and loss, Godfrey led the crusaders in a sudden sortie upon their enemies, which was completely victorious. The enthusiasm caused among the Christian army by the supposed discovery of the relic of the Holy Lance, was one great cause of this success. It was not till 1099 that the crusaders reached Jerusalem; and their numbers were then reduced by the sword and by disease to only 1,500 horse and 10,000 foot fit for service. The Mahomedan garrison was far more numerous, and the city was formidably strong. But the zeal of the crusaders was indomitable. After a siege of forty days, a successful assault was made, and 'on a Friday, at three in the afternoon, the day and hour of the Passion, Godfrey de Bouillon stood victorious on the walls of Jerusalem' (Gibbon).—When the crusaders were rested with carnage and pillage, they deliberated on the important subject of choosing a ruler of their conquest; and, with the universal consent of the assembly, Godfrey was hailed king of the Christian kingdom of Jerusalem. He showed his humility and piety by refusing to wear a golden diadem in the city where his Saviour had been crowned with thorns, and he desired to be called only Defender and Baron of the Holy Sepulchre. During his short reign he gained several military advantages in the field against the Mahomedans, especially at Aslon, where he completely routed a large army which the sultan of Egypt had sent to reconquer Jerusalem. Godfrey deserved still higher honour for his exertions in establishing order and justice in his dominions, and in compiling a code of laws for his subjects. Unhappily for the infant kingdom, he died within a year from his accession. [E.S.C.]

of Peace,' originally a private soldier, rose to be prime minister of Spain, 1764-1851.

GODWIN, earl of Kent, a powerful English baron in the Saxon period, celebrated for his turbulence and political intrigues, died 1053.

GODWIN, MRS. See **WOLSTONECRAFT**.

GODWIN, THOMAS, an English prelate, successively dean of Christ Church, dean of Canterbury, and bishop of Bath and Wells in the reign of Elizabeth, 1517-1590. His son, **FRANCIS**, successively bishop of Llandaff and Hereford, and au. of historical and antiquarian works, 1561-1633.

MORGAN, son of the latter, also a churchman, deprived as a royalist during the civil war, d. 1645.

GODWIN, TH., an English divine, 1587-1643.

GODWIN, WILLIAM, was born in 1756, at Wisbeach in Cambridgeshire. His father was a dissenting minister; and he himself, after having completed his education in the college at Hoxton, embraced the same profession, and preached for some years to a congregation near London. About 1782 he abandoned the pulpit, his opinions having undergone serious changes; and thenceforth he strove to make a livelihood by authorship. In 1793 he became famous, or notorious, by the publication of his 'Inquiry concerning Political Justice.' This celebrated work, founded on the dream of human perfectibility, is remarkable for that combination of vigour with want of comprehensiveness and real profundity, which marked all its author's writings. His crusade against the existing system of things in all its parts was next prosecuted in a more popular shape, and with singular force of passionate and descriptive eloquence, in his novel of 'Caleb Williams.' Strongly democratic in political opinions, but gentle as well as brave, he always protested against the bringing about of social changes by force; but, though he kept sedulously aloof from the plots which, in 1794, exposed Horne Tooke and others of his friends to prosecution for treason, he did them good service by his pen. In 1797, he published essays, moral and literary, under the title of 'The Inquirer.' The same year he married Mary Wolstonecraft, in deference to the opinion of the world, after having lived with her for some time in obedience to the opinion which he himself held in regard to marriage, and which she had advocated in her 'Vindication of the Rights of Women.' His wife died in giving birth to a daughter, who became Mrs. Shelley. By a subsequent marriage he had a son, a young man of great promise, who died of cholera in 1833. In 1799, Godwin published the picturesque novel of 'Saint Leon,' his last work of this kind that was worthy of his genius. 'Fleetwood,' published in 1804, and 'Mandeville,' in 1816, are much inferior; and 'Cloudesley,' which appeared in 1830, showed that the vein of self-scrutiny on which his strength depended, had been quite worked out. But, in 1803, he had entered a new path in his 'Life of Chaucer,' which, though wanting in unity and consecutive interest, is very instructive. For some time after this he attempted business as a bookseller, and wrote a good many school-books under the name of Baldwin. In 1815, he published his 'Lives of John and Edward Phillips,' the nephews of Milton; in 1820, he attacked Malthus in his 'Treatise on Population;' in 1828, he published the last of the four volumes

of his heavy but valuable 'History of the Commonwealth;' in 1830, appeared his essays called 'Thoughts on Man;' and in 1834, his 'Lives of the Necromancers.' The poverty of his old age was alleviated by an appointment from the ministry of Earl Grey. He died in 1836. [W.S.]

GOETHE, JOHANN WOLFGANG VON, is one of the most celebrated names in European literature. It is the name of a poet who united, in an extraordinary degree, power of imagination and power of expression; and who, not less remarkable for versatility than for vigour, produced, by the exertions of sixty years, works which exemplify, in one shape or another, every possible form and kind of poetry. Göthe holds, likewise, in the intellectual history of Germany, the position of a founder and inventor. His poems were almost the earliest in the language that deserved wide celebrity; they were, without exception, the first that were fortunate enough to attain it. Nor have they been more admired than imitated. To say nothing of the influence they have exerted among ourselves and elsewhere, nine-tenths of the poetry that has been heard in Germany during the last seventy or eighty years, have been little more than echoes thrown back from that of Göthe. The fact is a decisive testimony to the strength of his genius; yet it could not have occurred but for that closeness of sympathy with the spirit of his time, which the poet felt in every stage of his progress. Each of the most powerful impulses by which, in turn, the social and intellectual life of Germany was governed, found in him its earliest and also its most striking representative; and, while he interpreted the tendencies of the age with felicitous intuition, and prefigured their results with wonderful richness of imagination, he gained a firm hold on popular feeling through that very coldness and practicality of moral sentiment, which always kept him, in an ethical point of view, on a level with the world around him. He aimed sedulously at purifying and elevating poetical art; he never aimed at making poetry the teacher of goodness. If the noble-minded and impassioned Schiller often embodied his lofty aspirations after truth and virtue in a form too anxiously and openly didactic, and if, even when he did not thus err, he imprinted on his pictures a character of austere melancholy

which repels the worldly and the careless; yet the other hand, Göthe assuredly violated the laws of his art, when he studiously avoided indirect and suggestive teaching of goodness which is the most sublime prerogative of poetry, when he entrenched himself in a seeming tolerance which is really little else than sceptical indifference.—Göthe's father, a man in easy circumstances, was a citizen of Frankfort-on-the-Maine; and the poet was born, on the 28th of August, 1749. His boyhood and youth thus fell into the time when Germany was excited by the seven years' war; and when, in literature, the clear and energetic Lessing was laying the foundations of philosophical criticism, inculcating intelligent reason and affection for the arts of design, and protesting against that slavish subservience to French taste which had long prevailed among German men of letters. Sickness in childhood cherished Göthe's native precocity; and his mind was developed with remarkable rapidity. Besides the common branches of education, he busied himself with drawing, music, and natural history; and a poem on the scriptural history of Joseph, indicated at once his poetical inclinations, and the serious direction which his thoughts then took. At the breaking off of a youthful love affair, he gave a name to the heroine of 'Faust,' and a feature to 'Wilhelm Meister,' he was sent to the university of Leipzig to prepare himself for the legal profession. Law, however, was little attractive; and for speculative philosophy the young man contracted a disgust, which he did not seem to overcome in mature life, when Kant had become the guide of almost all the finer minds of his country. To classical studies, under the teaching of the correct and tasteful Ernesti, he paid more attention. To his early French reading was added some acquaintance with English literature. The discrepancies, however, between the different poetical schools, which he was unable to reconcile by any critical theory that had yet been presented to him, almost gave him a distaste even for poetry. His inquisitive and doubting temper found no food in the contemplation of the relations of society, presented to him in no clearer light than that which he derived from the French Encyclopædists; and his mind had already taken its first steps in that course of thought and feeling which, breaking out at first in rebellion against existing systems, led him by degrees to care less as to the truth or falsehood of any. Attempts were made at play-writing; and the uneasy restlessness of mind, which he thus endeavoured to remove by giving vent to it, was allayed more effectually by the diversion of his thoughts to the study of fine arts, in the works of Winckelmann and other philosophical antiquaries. In 1768, he left Leipzig and resided for a while in the country, where he studied alchemy and chemistry, Paracelsus Boerhaave, and sketched for himself a new religion, resting on a basis of mysticism or Newtonism. In Strasburg he nominally completed his professional studies, taking his degree of doctor in laws in 1771. The intimacy which he contracted with Herder, worked beneficially both on his literary opinions and taste, and on his view of life.—In 1773, he published 'Götz of Berlicingen' with the Iron Hand,' a romantic play, written

prose, and cast in the flexible and irregular mould of Shakspeare's dramatic histories. The velvety of the undertaking was as attractive as the force of imagination with which it was performed; and, while every one was moved by the character and fate of the true-hearted Götz, there was for reflective minds a deep significance in the picture which was presented, (under the symbolic forms of feudalism,) of the destruction of the reign of force, and the rise of a new world ruled by reason and established order. Here, too, the poet, in the multuous excitement of youth, poured forth his notions with an unrepressed and infectious enthusiasm. Still more unreserved was the expression of despondent and rebellious feelings, in his second work, 'The Sufferings of the Young Werther,' which appeared in 1774. In its design, differing more than a sentimental novel, and thus holding for a popularity much wider than 'Götz,' 'Werther' displayed domestic scenes so interesting, and described these with a pathos so profound and eloquence so flowing, that the hollowness of the morality was overlooked, and the real insignificance of the events forgotten. The German language assessed as yet nothing comparable to either of these two works; their author himself never surpassed the 'Götz;' and, after the appearance of 'Werther,' Göthe was not only the most popular writer of his day, but also the writer from whom competent judges most confidently expected great performance in his maturity. His fame immediately gained for him a position which enabled him to devote his energies, without interruption or anxiety, to literary study and invention. The opportunities were used with zealous industry throughout the whole remainder of his long life; and his skill of art was developed with a success coming in some degree for that narrowing of his sympathies, which was caused by the artificial atmosphere of a petty court.—The duchess of Saxe-Weimar, left a widow in the infancy of her son, the duke Karl-August, not only administered wisely the civil affairs of her little sovereignty, but conceived the idea of making her miniature capital the intellectual centre of Germany. In 1774, in the course of his travels, the young duke made the acquaintance of Göthe; and, on his assuming the government in 1775, the poet accepted the invitation he received to attach himself to the court of Weimar. Wieland, whose mental history was at some points not unlike that of Göthe, was already there, having been the prince's tutor; Herder was added to the band in 1776; Schiller was afterwards one of its members for a few years; and other poets, and critics, and novelists, were gathered round these chiefs. Göthe was the leading spirit of the group, even during the last quarter of the eighteenth century, when these men and others were constructing and guiding the literature of all Germany; and his supremacy became yet more absolute afterwards, when, for another generation, he stood alone, the last survivor of a race greater than the greatest of their successors.—He was ennobled, received honorary councillorships and other appointments, and had even some share in the real business of the small state. But, in the most active period of his life, his most important office was that of theatrical director. Journeying to Italy in 1786, he spent

two years in that country, which had much effect on his opinions and sentiments. In 1792 he accompanied the duke on the campaign in France. In 1806 he married. Not long afterwards he retired from all active business; but in 1815 he was obliged to take office as prime minister, which he held till the death of his friend and patron the grand duke in 1828. He died at Weimar on the 22d of March, 1833, energetic to the last, both in body and in mind.—For a dozen years after his settlement at Weimar, he seemed to be reposing on his quickly-won laurels. But he was very far from being idle; nor, in that later period in which his most distinguished works successively appeared, were these by any means the only fruits of his labour. He wrote accounts of his travels in Switzerland and Italy, and many critical and other essays; and, amidst an unceasing stream of small poems—few of them possessing much merit—were some exquisite ballads and other pieces of a lyrical or reflective cast. For the stage of Weimar, likewise, he furnished many plays; among which, as having importance literary as well as theatrical, may be named his prose tragedies of 'Egmont' and 'Clavijo.'—There still remain to be briefly noticed the works on which his celebrity mainly rests. The earliest of these were two dramas, which appeared in 1787, and flowed from the twofold inspiration of his residence in Italy. The 'Iphigenia in Tauris' is a modern echo, finely and originally modulated, of the classical antique; the 'Tasso' is a realization of the fluttering spirit of romance which lingered in the courts and society of Italy when the realities of the middle ages had passed away. None of Göthe's works are so admirable as these two for skill of art; none are more exquisite in ideal beauty of imagery; none are so characteristically illustrative of the desire he always felt to attain, though it were by the sacrifice of sternly solemn truths, a placid and meditative harmony of feeling. In 1795 appeared the first part ('The Apprentice-Years') of his novel 'Wilhelm Meister.' It is one of the most poetical, and the Germans hold it to be also the most philosophical, of all prose romances. Its philosophy, like its slippery morality, must here be left untouched. Its introduction of criticisms on literature and art was eagerly emulated, giving birth to those 'Art Novels,' the breed of which has been propagated to our own day. The poet's fame rose to its zenith in 1798, on the publication of his world-renowned 'Faust.' It is easy to feel, or rather it is impossible not to feel, the singular poetic beauty of this wonderful poem, its unsurpassed felicities of imagery and diction, and the impressiveness of the despondent melancholy which is the ruling temper of the whole. Philosophically considered, the 'Faust' is a propounding of the enigma of human life, with a refusal to accept, from religion, its only possible solution. In the same year, in 'Hermann and Dorothea,' Göthe attempted, as others had before him, at once to naturalize the classical hexameter in his native tongue, and to give epic form to a narrative of familiar life.—At this point the series of the poet's great works may be said to close. There next occurred a long interval, marked by nothing of distinguished note. The appearance, in 1810, of the notorious novel of the 'Wahlverwandtschaften' (Elective Affinities), while as-

surely it denoted a falling off in creative genius, betrayed as clearly a settled declension of moral sentiment. The epicureanism in which the poet now found repose, was worse than the sceptical spirit of resistance which had disturbed his aspiring youth. In 1811 he published his interesting autobiography called 'Poetry and Truth,' (Dichtung und Wahrheit). His countrymen place much value on the collection of lyrics entitled the 'West-östlicher Divan,' which appeared in 1819, but seems to have been written much earlier. In 1821 'Wilhelm Meister' was completed by the second part, the 'Years of Wandering' (Wanderjahre).—After this, Göthe's only sustained effort in poetry was the second part of 'Faust,' which was under his hands till the close of his life. None but his most bigotted disciples have ventured to pronounce it in any respect worthy of a great poet. During the last few years of his old age, his favourite employments were some of the physical sciences both in vegetable physiology, and in optics, he published speculations which scientific men have thought worthy of notice.

GOLDSMITH, OLIVER, the son of an Irish curate, was born in the county of Longford in 1728. Lissoy, in his native parish of Formey, is said to have been the original of his 'Sweet Auburn.' The assistance of an uncle enabled him in 1744 to enter at Trinity College, Dublin, where he was idle and extravagant, and probably ill-used. He is said to have applied unsuccessfully for ordination, and to have been for some time a family tutor. He threw away in a gaming-house the money which his uncle had given him to aid in his study of law; but the same kind relative enabled him to become a student of medicine in Edinburgh, where he spent two years from the close of 1752, afterwards passing a year at Leyden. He next took a

pedestrian tour of twelve months on the continent, travelling as far as the north of Italy; before or after this he was an usher in a school. Both of these experiences he has described in

[Goldsmith's House at Lissoy.]

famous novel.—In 1756 he came to London, attempted medical practice in a humble way, with small knowledge and no success; and, on submitting to examination at the College of Surgeons, to qualify him for an appointment abroad, he was rejected as insufficiently informed. He had already been writing for the booksellers; and his thorship now became perforce his only means of livelihood. He drudged for the *Monthly Critical Reviews*, and for other periodicals; compiled his well-written 'Histories of Greece, Rome,' and his 'History of the Earth and its inhabited Nature.'—It was in the intervals of his toils that he produced those original works, which made him both in prose and verse, one of the classics of English literature. In 1761 he was while in confinement for debt, his inimical 'Vicar of Wakefield,' and soon afterwards appeared 'The Citizen of the World,' 'The Vellor,' which had been partly written abroad, and the beautiful ballad of 'The Hermit,' published in 1765. The former of these poems gave him great and deserved fame as a descriptive poet, which was increased in 1769 by the publication of 'The Deserted Village.' He became more popular as a play-writer. His comedy 'The Good-Natured Man,' which was acted in 1768, did not succeed greatly on the stage, but was highly esteemed by Johnson and other critics, and 'She Stoops to Conquer,' appearing in 1773, was received with universal applause.—The author survived this brilliant success but a short time, and profited very little by the wealth which was now accruing to him. Industrious through necessity, he was indolent by temperament: he was careless and improvident in money matters, equally ready to squander his painfully-earned gains at gaming-table, or to spend them in charity. Genuinely amiable, and good-hearted, he was also irresolute, vain, and capricious; and, while Johnson and other literary friends did not estimate him enough for his fine genius, his conduct gave them much excuse for treating him, as they did, like a favourite and petted child. He died 1774.

GOUVION-ST.-CYR, LAURENCE, a general and marshal of France, distinguished in the campaign on the Rhine 1795; and under Moreau and Joubert, in the campaign of Italy. After the fall of Napoleon he was made a peer of France, and served as minister of war. The latter years of his life were occupied in the composition of his several memoirs; died 1830.

GOW, NEIL, was born in Strathband, Perthshire, of humble but honest parents, in the year 1727. His taste for music was early decided. At the age of nine he began to play, and was, it is said, self-taught, till about his thirteenth year, when he received some instruction from John Cameron, an attendant on Sir George Stewart of Grandtully. A trial of skill having been proposed, Neil was persuaded to enter the lists, and one of the minstrels, who was blind, being made the umpire, the prize was adjudged to Neil Gow, by a sentence in the justice of which the other competitors cheerfully acquiesced. Having now attained the summit of his profession at home, the distinguished patronage, first of the Athole family, and afterwards of the duchess of Gordon, soon introduced him to the notice and admiration of the fashionable world. From this period, Gow was unrivalled in his department of Scotch national music. The different publications which have appeared under the name of Neil Gow, and which contain not only his sets of the older tunes, but various occasional airs of his own composition, are striking specimens of feeling and power of embellishment. These were set and prepared for publication by his son NATHANIEL, whose respectable character and propriety of conduct secured for him the esteem and favour of the public. In private life, Neil Gow was distinguished by a sound vigorous understanding, by a singularly acute penetration into the character of those, both in the higher and lower spheres of society, with whom he had intercourse, and by the conciliating and appropriate accommodation of his remarks and replies, to the peculiarities of their station and temper. Though he had raised himself to independent and affluent circumstances in his old age, he continued free from every appearance of vanity and ostentation. He maintained to the last the same plain unassuming simplicity in his carriage, his dress, and his manners which he had observed in his early and more obscure years. He died at Inver, near Dunkeld, in 1807. Besides his son Nathaniel, he left another (JOHN), who long resided in London, and who in-

herited much of his father's musical taste and power of execution. Two other sons of equal eminent musical talent (WILLIAM and ANDREW) died a few years before their father, but not that they had established their reputation as true descendants of *famous Neil*. [J.]

GRABERG, OLAVE, a protestant theologian, Sweden, au. of 'Thoughts on the Bible,' 1716-1791.

GRACCHI. The Gracchi, so often mentioned in Roman history, were the two sons of Tib. Sempronius Gracchus and Cornelia, the daughter of Scipio Africanus, the elder. Gracchus, who had been twice consul, and had obtained two triumphs, died while his sons were yet young, and Cornelia devoted herself exclusively to the charge and education of her children. Under her maternal guidance, aided by the best Greek masters, they surpassed in accomplishments all the Roman youths of the time.—1. TIB. SEMPRONIUS GRACCHUS, the elder of the two, was born B.C. 187. Scipio Africanus the younger had married his sister; and when he entered upon the command of the army against Carthage, Tiberius accompanied him, and was present at the destruction of that renowned city. Nine years after he accompanied the consul Mancinus as questor in Spain, where, by his integrity and disinterestedness, he gained the esteem of the enemy as well as the affections of the Roman soldiers. When the Roman army under Mancinus was defeated by the Numantines (B.C. 137), Tiberius succeeded in effecting a treaty on reasonable terms, which, however, the senate refused to ratify. Tiberius, notwithstanding, reaped the glory of having saved 20,000 men from destruction, and the people rewarded his services with affection and gratitude. During the long wars in which the Romans had been engaged, many encroachments had been made on the public domains; the nobles had obtained possession of extensive tracts, which were cultivated by foreign slaves; and the poorer classes of Roman citizens, being thus thrown out of employment, were reduced to a state of pauperism. Tiberius, sympathizing with the privations of the poor, resolved to revive the Licinian law, which defined the extent of public land tenable by any citizen. With this view he was elected tribune of the people in B.C. 133, and, in the face of unscrupulous opposition on the part of the nobility, carried a law similar to that of Licinius. Tiberius himself, his brother Caius, and his father-in-law, App. Claudius, were appointed commissioners for measuring and distributing the land. At this crisis of affairs, Attalus, king of Pergamus, died, bequeathing his kingdom and treasure to the Roman people, and Tiberius proposed to divide the treasure among the recipients of the land under the new law, to enable them to stock their farms. This proposal raised the indignation of the nobles to a higher pitch. To prevent his law from being abolished, and also to secure his person against imminent danger, he resolved to offer himself a candidate for the tribuneship of the following year. On

of election, his opponents demurred to his eligibility, and night intervened before the question was decided. Next morning both parties presented themselves at the capitol in readiness for acts of violence; the senators were resolved to kill Tiberius, and his own partizans were prepared to defend him. Hereupon Scipio Nasica, after in vain appealing upon the consul to defend the state, rushed from the temple of Faith, where the senate had assembled, followed by the nobility, overawed the mob, seized their weapons, and killed about three hundred, of whom Tiberius Gracchus was one, *q. 133*. Thus perished one of the truest Roman patriots, whose memory has only in recent times been freed from the odium which centuries of misrepresentation had heaped upon it.—2. CAIUS EMPRONIUS GRACCHUS was nine years younger than Tiberius; and at the time of his brother's death was in the army of Scipio Africanus in Spain. The fate of his brother seems to have deterred him from acting as a commissioner under the agrarian law, or from taking any prominent part in public affairs, till B.C. 123. Returning then from Sardinia, where he had served two years as quaestor, he was elected tribune of the people, and commenced a career which speedily led to a fatal conclusion. The measures which he proposed were partly vindictive and partly intended to establish his own popularity; of the latter class was a poor-law authorizing a monthly distribution of corn to the people at a merely nominal price; the effect of which was to make the population of Rome swarms, and to attract the poor and indolent from all parts of Italy. Caius next directed his efforts against the power of the senate, deprived them of the right of electing the judges from their own number, transferring it to the equites, and passed law enacting that the provinces of the consuls and praetors should be fixed before the election of these magistrates. Being re-elected to the tribuneship of the following year, he was chiefly employed in passing laws respecting the colonies, and himself established a colony on the ruins of Carthage. After the expiry of his period of office, he united with the tribune Fulvius in inciting the populace to acts of violence, which led the senate to arm the consul Opimius with absolute power. The consul summoned Gracchus and Fulvius before him to answer for their conduct; and, after some attempts at negotiation, attacked and dispersed the popular party. Gracchus, who had taken no part in the struggle, fled across the Tiber, and entering a grove sacred to the Furies, ordered his slave to kill him. He thus perished, B.C. 121, at the age of thirty-three. [G.F.]

GRATIUS, a Roman poet, 1st century B.C.

GRATIUS, O., a controversial writer, 16th ct.

GRATTAN, HENRY, an Irish statesman and lawyer, was born in Dublin about the year 1750. He was called to the Irish bar in 1772; and having attached himself to Lord Charlemont, he obtained, by the powerful influence of that aristocratic national leader, a seat in the Irish parliament in 1775. His fiery eloquence, essentially Irish in its impetuosity, which yet was guided by good taste and strong judgment, gave him an immediate influence both with parliament and the public, and his bold spirit speedily grasped at projects far beyond the more hesitating policy of his leader. His great object was to have a recorded declaration of the legislative independence of Ireland, and by obtaining it as he did, there is no doubt that he prepared his country to receive juster terms and a higher position in a legislative union with Britain than she might have otherwise obtained. Besides the old assertion of the supremacy of the English crown in Poyning's Act, there stood, in the British statute book, so lately as the reign of George I., an offensive declaration of the legislative authority of the British parliament over Ireland. On the 16th of March, 1782, the Irish Commons, as the

result of Grattan's exertions, carried a declaration of rights condemning this legislative assumption, and by the cordial aid of Fox, then fortunately power, the offensive act was repealed by the British parliament. The Irish legislature resolved to show their gratitude by a vote of money to Grattan, which, at his own desire, was reduced from £100,000 originally suggested to £50,000. His popularity was subsequently occasionally shaken by the hostility of his great rival Flood. Until many of his coadjutors in the struggle for national independence, he was a warm friend of Catholic emancipation. He strongly opposed the union, and was for some time a member, but not a remarkable one, of the united parliament. He died on 14th May, 1820. [J.H.]

GRAVINA, PIETRO, a Neapolitan poet, 15th cent.

GRAVIUS, an annalist of Friesland, 16th cent.

GRAY, E. W., an eminent naturalist, d. 1800.

GRAY, STEPHEN, an English gentleman, distinguished as an experiment. philosopher, d. 1736.

GRAY, ROBERT, bishop of Bristol, author of 'Theory of Dreams,' 'Connection between Sacred Writings and the Literature of Jewish Heathen Authors,' &c., 1762-1834.

GRAY, THOMAS, the son of a scrivener in London, was born there in 1716. From Eton school he passed to Cambridge, where he busied himself with languages and poetry, and neglected mathematics and philosophy, as indeed he did ever afterwards. Leaving the university in 1738, without taking a degree in arts, he intended to study law, but in the meantime entered on a continental tour with Horace Walpole. The two indifferently assorted companions travelled through France and Italy, but a misunderstanding taking place, Gray returned to England in 1741.—His father being now dead, he seems to have been in possession of means enabling a person of moderate wishes and indolent habits to dispense with the labour of a profession. He settled himself at Cambridge for the remainder of his days, hardly ever leaving that place, unless when he made tours to Wales, Scotland, and the lakes of Westmoreland, and when he passed three years in London, for access to the library of the British Museum. His life thenceforth was purely that of a scholar; and it was spent in reading and desultory thinking.

ther than in authorship. His knowledge was multifarious and exact.—That he was intellectually active, in his own lazy and miscellaneous shion, is shown by his 'Letters,' published after his death. These are admirable specimens of English style; they contain some of the most picturesque pieces of descriptive writing in the language; they are full of acute, though fastidious criticism; and they have innumerable touches of wit and humour. He planned editions of classical authors, and made collections for the purpose. But he completed nothing except those little poems, which, flowing from an intense though not fertile imagination, inspired by the most delicate poetic feeling, and elaborated into exquisite terseness of diction, are among the most splendid ornaments of English literature.—His 'Ode to Eton College,' published in 1747, attracted little notice; his 'Elegy in a Country Churchyard,' appearing in 1749, became at once, as it has always continued to be, one of the most popular of all poems. Most of his other odes were written in the course of the three years following 1753; and the publication of this collection in 1757 established his poetical reputation with all who were competent to appreciate the most refined beauties of poetry. In 1768, after having been disappointed of the place when it was last vacant, he became professor of modern history at Cambridge. He had long been distressed by attacks of gout; and one of these killed him in 1771. [W.S.]

GREGORIUS, J. F., a Ger. savant, 1697-1761.

GREGORIUS, PUBLIUS, a native of Tiphernum, distinguished at Venice as professor of ancient literature, died about 1469. EMMANUEL FREDERIC, his son, a theologian and philologist, author of numerous works in German and in Latin, 1780-1800.

GREGORY. The saints of this name are—GREGORY THUAMATURGUS, a convert of Origen, distinguished by his writings and marvellous power in the conversion of the heathen, died about 270. GREGORY NAZIANZEN, for whose history see farther on. GREGORY OF NYSSA, another of the Greek fathers, the biographer of Gregory Thuama-

turgus, and himself a philosophical divine of the highest talents, born about 330, died 400. GREGORY OF TOURS, author of a 'History of France,' and 'The Miracles of the Saints,' &c., 559-595. GREGORY LOUSAVORISCH, 'The Illuminator,' the apostle and first patriarch of Armenia, died about 336. GREGORY, bishop of Agrigentum, author of Greek commentaries, died early in the 7th century. And the first two popes of the name.

GREGORY. The popes of this name are—GREGORY I., surnamed 'The Great,' and a saint in the Romish calendar, author of works which have often been reprinted, born about 544, raised to the pontificate 590, died 604. GREGORY II., also a saint of Rome, succeeded 715, died 731. GREGORY III., reigned about ten years, and died 741. GREGORY IV., 827-844. GREGORY V., born 972, died, after a pontificate of two years and nine months, 999. GREGORY VI., elected pope 1045, deposed 1046. GREGORY VII., elected 1073, died 1085. GREGORY VIII., pope two months only, elected and died 1187. GREGORY IX., reigned 1227-1241. GREGORY X., 1271-1276. GREGORY XI., b. 1331, reigned 1370-1378. GREGORY XII., born 1325, reigned 1406-1417. GREGORY XIII., distinguished by the reformation of the calendar, and one of the ablest civilians of his age, born 1502, reigned 1572-1585. GREGORY XIV., born 1534, succeeded 1590, died 1591. GREGORY XV., born 1554, succeeded 1621, distinguished as the founder of the College of the Propaganda, died 1623. GREGORY XVI., born 1765, succeeded Pius VIII. 1831, died 1846.

GREGORY. The patriarchs of Constantinople of this name are—GREGORIUS, or GREGORIUS CYPRIUS, died 1290; GREGORY OF RIMINI, a celebrated scholar, died 1357; and a third of the name who played an important part in the divisions which agitated the Turkish empire, and was hung by the populace of Constantinople 1821.

GREGORY. The princes and patriarchs of Armenia of this name, besides G. Lousavoritch in the list of saints, are—GREGORY, the last prince of the race of the Mamigoneans, acknowledged by the caliph under the title of patriarch 659, killed in battle with the Chazars 683. GREGORY MAGSDROS, a prince of the royal race of the Arsacides of Persia, distinguished as a poet and man of letters, author of an Armenian grammar, &c., commenced his political career in the time of John, king of Armenia 1030, and died 1058. GREGORY II., the son and successor of the preceding, governed the patriarchate 1058-1105. GREGORY III., nephew of Gregory II., succeeded Basil 1113, died 1166. GREGORY IV., nephew of the preceding, reigned 1173-1193. GREGORY V., nephew and successor of Gregory IV., imprisoned by the lords and clergy of Armenia on account of his debaucheries, and perished in attempting to escape, 1193-1194. GREGORY VI., father of Gregory V., and his successor in 1193, died 1198. GREGORY VII., successor of Constantine I., 1294, died 1306. GREGORY VIII., maintained a long struggle for the royal authority, and was at length killed, 1411-1418. GREGORY IX., elected by certain of the clergy 1440, and not being recognized by the Eastern Armenians, submitted to Vartabed, chosen by them in 1441, and confined his own authority to Cilicia, died 1447. GREGORY X.,

reigned 1443-1461. GREGORY XI., 1536-1546. GREGORY XII., 1569-1573. GREGORY XIII., known at first under the name of Serapion, elected after the flight of David V. and Melchisedech 1603, fell into the hands of the dispossessed patriarchs, aided by the Persians, and was cruelly tortured 1605, died, probably in consequence, 1606.

GREGORY: an illustrious Scottish family name, recalling the continuous splendours of Bernoullis or Cassinis: we shall give the name and little more of its most remarkable scions. Earliest and perhaps loftiest, stands JAMES GREGORY, born in 1639; son of the progenitor of the family, the minister of Drumoack in Aberdeenshire. At the age of twenty-nine he became professor of mathematics in St. Andrews; from which he was transferred to the same chair in Edinburgh, 1666. He died at the early age of thirty-six, having given the most brilliant promise as well as great performance. We owe him one form of the reflecting telescope; and in analytic power he sometimes rivalled Newton. His memoirs are very numerous, bespeaking talents and originality of the first order.—2. DAVID GREGORY, nephew of James, born at Aberdeen in 1661; at the age of twenty-three he succeeded his uncle in the metropolitan chair; David was an elegant mathematician and a good astronomer. He became Savilian professor at Oxford; and was one of the first who comprehended and taught the philosophy of Newton. He died 1708.—3. JAMES and CHARLES, brothers of the preceding, were also able mathematicians: James succeeded David in Edinburgh, and Charles held the chair in St. Andrews, which he transmitted to another mathematician, his son, DAVID.—4. JOHN, the Medical branch of this singular family. It originated in JAMES, son of the great James Gregory and professor of medicine in King's College, Aberdeen. He bequeathed his abilities and chair to his son, DR. JAMES GREGORY, a man of repute; his celebrated son was,—6. JOHN GREGORY, M.D., born at Aberdeen in 1724. Few men have more deserved a high fame, than this eminent and excellent person. Thoroughly educated as a physician, united to that culture, great sagacity and moral excellence, as well as refined tastes that led him into intimacy with all the eminent men of the brightest era of Scottish literature. From the year 1766 he held the chair of Practice of Physic in the university of Edinburgh; and continued until his death in 1792 an acknowledged ornament of the metropolis. John Gregory is the author of the 'Father's Legacy to his Daughters,' which he will long be remembered professionally by his 'Elements of the Practice of Physic.' This is a life of him by the naturalist Smellie.—DR. JAMES GREGORY, son of the preceding, succeeded to his chair, and sustained his place as a leading member of the Edinburgh Medical School. The kind of genius which most distinguished this great family was not extinct; in mathematical powers again broke forth. Son of Dr. James, was—8. The late D. F. GREGORY of Trinity College, Cambridge, an analyst removed from Science at the earliest age: he would have rivalled his greatest predecessor.—It is stated that of this family no less than sixteen members have held British professorships. [J.P.N.]

GREGORY, archbishop of Corinth, 12th cent.

GREGORY, a king of Scotland, reign. 875-892.
GREGORY, GEORGE, D.D., an Irish divine,
and historical and miscellaneous wr., 1754-1808.

GREGORY OF NAZIANZUS, commonly called
T. GREGORY NAZIANZEN, was born at Arianzus,
village at no great distance from the town which
as given to Gregory his distinctive cognomen.
His pious mother Nonna, devoted him when an
infant to the service of Christ and the church.
His education, which commenced at Cæsarea in
Cappadocia, was prosecuted next at Cæsarea
Chalcedoni, and at Alexandria, and was finished at
Antioch, where he began a life-long intimacy with
the Great. His father, of the same name,
had been bishop of Nazianzus for many years, and
the course of time he was joined with his father
in the administration of the church. He had pre-
viously refused from Basil the diocese of Sasima.
At his father's death he retired to Seleucia the
capital of Isauria, and spent three years in solitude
and meditation. In 379 he went by urgent re-
quest to Constantinople to preach to the remnant
of the orthodox party who survived the Arian per-
secutions. His private chapel he named Anas-
tasia, but his eloquence and popularity became so
immense, that with the concurrence of the em-
peror Theodosius, the general council exalted him
to the patriarchate or archiepiscopal chair. But
objections were soon started to the regularity and
modesty of his election, and he gladly resigned the
office, delivering a magnificent farewell oration in
the great church St. Sophia in June, 381. On his
return homeward he visited Cæsarea, and pro-
nounced his glowing funeral discourse on his friend
Basil. He discharged the duties of a bishop for a
brief period at Nazianzus till his cousin Eulalius
was installed, and at once he retired to the coun-
try, where on his paternal estate at Arianzus he
spent the remainder of his life in the cultivation
of his garden, and the composition of religious
poetry. Gregory died about the year 389. Among
his literary remains have been preserved about
thirty sermons, 250 epistles, and nearly 400 poems.
The life of this theologian was a species of combat
between the active and the contemplative pro-
pensity within him. Ever seeking quiet he was
never forced into agitation and strife. Seclusion
was earnestly coveted by him, but peculiar crises in
the church summoned him into the arena, in which
he no sooner found himself, than he sighed again
for his calm retreat. His style, which seems based
on the model of Isocrates, is often highly eloquent,
but is frequently disfigured by exaggeration and
ornament with rhetorical embellishment. His poems
are often distinguished by peculiar beauties, though
marred by their artificial structure and allusions.
Several editions of his works have been published,
and a good edition is still a desideratum. The
first princeps was published at Basle in 1550,
and of the Benedictine edition only one volume
has appeared, and that at Paris, 1778. [J.E.]

GREGORY, OLINTHUS GILBERT, LL.D., an
able and industrious English mathematician and
author, born in 1774, died 1841. He wrote
several valuable elementary books of science, but is best
known by his 'Evidences of Christianity.'

GREGORY, ST. VINCENT, a Flemish mathe-
matician, born at Bruges in 1584, died in 1667.

GREIFF, F., a German chemist, 1601-1668.

GREIG, SAM. CARLOWITZ, a naval officer b. in
Scotland, and dist. in the Russian service, d. 1788.

GRENADE, L. DE, a Spanish ascetic, 1505-88.

GRENVILLE. Several members of this family
are known as statesmen, the principal of whom
are — RICHARD GRENVILLE, afterwards Earl
Temple, and his brother GEORGE, commonly
called Mr. Grenville, the reputed author of the
American Stamp Act. Lord Temple was born
1711, commenced his public life as a member of
parliament in 1734, and died in retirement 1779.
Mr. George Grenville was born in 1712, and
served in parliament as member for Buckingham
from the year 1741, till his death in 1770. The
names of the brothers are mixed up with the party
politics of the whole of this period, sometimes as
warmly attached friends, and at others as political
enemies. Mr. Grenville was connected with the
administration in several subordinate offices from
1744 to 1762; the last five years of this interval,
as a colleague of his brother, Lord Temple. In the
last mentioned year he became secretary of state
in the ministry of Lord Bute, and from that time
to 1765 his brother was associated with Mr. Pitt
in the opposition. In 1765 Mr. Grenville, who
had risen to the premiership two years previously,
was dismissed by the king, and a breach occurring
at the same period between Mr. Pitt and Lord
Temple the brothers were reconciled. Their char-
acters were very different, but they were both
agreed on the principle of taxing America as a
legislative right, and Mr. Grenville had the manli-
ness to carry out his convictions irrespective of the
consequences. He was always regarded as the
ablest man of business then in the House of Com-
mons, and seems to have resembled the late Sir
Robert Peel in many points. Lord Temple, on the
other hand, was a man of factious and turbulent
disposition, and if his name was not before the
public in connection with any useful measure, it
was sure to be extant in some *pasquinade*, per-
haps as 'Lord Gawkey,' or 'Tiddy-doll.' He was
a partizan of Wilkes, and thus united the opposite
extremes in his political conduct. The late lib-
rarian of Stowe has recently edited the correspon-
dence of the brothers, which throws much light upon
the political transactions of the period. In the
third volume of these interesting papers he has
collected a mass of evidence tending to prove that
Lord Temple is the original of 'Junius.' [E.R.]

GRENVILLE, RIGHT HON. WILLIAM WYND-
HAM, Lord Grenville, third son of Mr. George
Grenville, born 1759, distinguished as a member
of the House of Commons and a statesman from
1789 to 1806, when he succeeded Pitt as prime
minister, died 1834.

GREPPI, CARLO, an Ital. dramat., 1751-1811.

GRESHAM, SIR THOMAS, founder of the Royal
Exchange of London, and the Gresham Lectures,
was the son of Sir Richard Gresham, merchant
and lord mayor of that city, and acquired univer-
sal fame as a merchant for his knowledge, sound
judgment, and integrity. Besides his munificent
endowments in the interest of commerce and the
arts, he served the state as ambassador, and con-
tributed greatly to placing the financial affairs of
England upon a sound basis, being in constant in-
tercourse and correspondence with Sir W. Cecil.
He was greatly honoured by Queen Elizabeth.

He was born in London 1519, and died suddenly at his house in Bishopgate-Street 1579.

GRESLON, A., a French missionary, 1618-97.

GRESSET, F., a French philologist, 1795-1831.

GRESSET, J. B. L., a Fr. dramatist, 1709-77.

GRETRY, ANDRÉ ERNEST MODESTE, a celeb. compos. of Fr. operas, and wr. on music, 1741-1813.

GRETZER, J., a Ger. contriv. wr., 1561-1625.

GREUZE, J. B., a French painter, 1726-1805.

GREVILLE, FULKE or FOULQUE, Lord Brook, a dist. patron of letters, au. of the 'Life of Sir Ph. Sydney,' and mem. of the privy council, 1554-1628.

GREVIN, J., a French dramatist, 1540-1570.

GREW, OBADIAH, an English divine settled at Coventry, 1607-1698. His son—

GREW, NEHEMIAH, a physician and botanist, was born at Coventry about the year 1628. He died in 1711.—Grew was educated at a foreign university, and after taking his degree, he settled in his native town as a physician. Here he commenced making observations upon the physiology of plants, and in 1760 he communicated to the Royal Society his first thoughts upon the subject in a paper entitled 'Idea of a Philosophical History of Plants.' His essay was so well received that he was invited to come to London, which he did in 1672. Upon the recommendation of Bishop Wilkins he was elected a fellow, and in 1677 he was appointed secretary to the Royal Society. His celebrated work, 'The Anatomy of Plants,' with an 'Idea of a Philosophical History of Plants,' was published in 1682, illustrated by many plates, and forms a perfect storehouse of facts upon vegetable anatomy, which has been freely made use of by succeeding botanists. His remarks upon vegetable secretions and their properties are very ingenious—his comparative examination of the various kinds of fruits and seeds abounds in originality—and he appears, from several passages in his works, to have discovered the doctrine of the sexes in plants, and the fecundating properties possessed by the dust of the anthers. Linnaeus has named a genus of plants after him, *Grewia*. [W.B.]

GREY, CHARLES EARL, was born on 13th March, 1764. His father, Sir Charles, was ennobled for his military services in 1802, but the family was one of ancient renown, connected with early peerages, and there is no doubt that the rank and antiquity of his house exercised considerable influence in mitigating prejudices against a career so boldly and steadily directed in favour of popular influence and democratic institutions as that of Earl Grey. He studied at Eton and Cambridge, and made the usual continental tour. He entered parliament as member for Northumberland, in 1786, and two years afterwards was distinguished by being named one of the managers of the Hastings' impeachment. He became one of those whom personal attachment and political sympathy united under the standard of Fox; but as the French revolution went through its stages, the bold and ardent young man was inclined to follow it with a far closer sympathy than the leader, now a veteran in parliamentary tactics, was disposed to sanction. He was an active member of the dreaded Society of the Friends of the People; and in 1793 he brought forward a motion in favour of parliamentary reform, founded on a petition

from the society, boldly exposing the defects of the existing system. But the policy of parliamentary reform had not only been deserted by and his friends, but was rather discountenanced than aided by the veteran members of the party, and he was left in a minority of 41 to 1. He continued to be the bold and unhesitating nuncio, from time to time, of every minister, act savouring of corruption, extravagance, stretching of the arbitrary elements of the constitution; and in the extremely critical time which he acted, there is no doubt not only the zeal and firmness of the young orator well tried, but that any man of less courage, and capacity would have fallen a sacrifice to zealous temerity. Holding the courtesy title of Lord Howick, he became first lord of the admiralty in the short Whig ministry of 1806. In November, 1807, his father's death sent him to the House of Lords, where he pursued his old path unaltered, save by adaptation to the new sphere of exertion. He was the main object of the less negotiations for a mixed ministry in 1810. His history as the leader of the Whig ministry of 1830, which carried the reform bill, has too long and important a place in the history of the age to afford materials for a satisfactory abridgement. It is well known that Earl Grey's courage and firmness, undiminished by the years which had enlarged his sagacity and matured his political capacity, were greatly instrumental at that epoch in saving the country from a civil war. He resigned office in July, 1834, and spent his declining years in respected retirement. He was a man of remarkably fine appearance and dignified manners; and though a friend of popular institutions, his habits were reserved, and were often characterized as haughty. He was married in 1787 to Elizabeth, the only daughter of Lord Ponsonby. He died at Howick on 17th July, 1845. [J.E.]

GREY, LADY JANE, whose tragical fate is known to readers of English history, was granddaughter of Mary Tudor, sister of Henry VIII., and of Charles Brandon, duke of Suffolk. This alliance was brought about by singular circumstances. The Princess Mary had been married to Louis XII., king of France, in pursuance of a treaty of peace and confederacy, in the year 1514, and about three months afterwards lost her husband, who was succeeded by his cousin Francis I. As the queen dowager had been of an amiable disposition, there were more reasons than one to the birth of a posthumous child. Francis, therefore, connived at a private marriage between the bashful widow and the duke of Suffolk, who then at the French court, and probably interposed his good offices to reconcile Henry to the match. The issue of this union was a daughter, named Frances, who was married to Henry Grey, marquis of Dorset, and as a consequence gave birth to Lady Jane Grey, at the family seat in Leicester-shire, 1537. Being educated as a protestant, possessing talents which rendered her one of the prodigies of her sex, the duke of Northumberland easily prevailed on Edward VI. to name her successor, thereby excluding his sisters Mary Elizabeth; the one of doubtful religion and other most certainly a bigotted catholic. In consequence of an immediate competitor for the French crown

therefore, the amorous embraces of Mary Tudor, ded by a little management at the French court, used up one for the English in the person of an innocent, talented, and beautiful grandchild. Having secured his purposes with the king, Northumberland married his son, Lord Guildford Dudley, to Lady Jane Grey, and they were both executed after a phantom royalty of nine days, on the 12th of February, 1554. Lady Jane was only in her seventeenth year, and was remarkable for her skill in the classical, Oriental, and modern languages, and for the sweetness of her disposition. [E.R.]

GROTIUS, or GROOT, HUGO, a jurist, divine,
historian, and general scholar, was born at Delft,
in Holland, on 10th April, 1583. When eleven
years old, he was sent to the newly-established
protestant university at Leyden, where he had the
fortune to study under Joseph Scaliger. He was
so precocious, not only in the acquisition of know-
ledge, but in the capacity of imparting his acquire-
ments by literature, that at the age of fifteen he
might be said to have a European reputation, and
he was then received with distinction at the court
of Henry the Great. Nor did his boyish attain-
ments indicate a premature exhaustion of his
powers; on the contrary, his mind seems to have
grown with every year added to his age, and he
was ever accumulating new intellectual riches and
enlarging his capacities. In 1613 he obtained the
important office of pensionary of Rotterdam. But
it was unfortunate that one whose conquests in
important studies were so valuable, should have
had his time occupied, and his mind distracted by
the wretched polemical conflict which then shook
the Netherlands. He became one of the illustrious
victims whose sufferings are a scandal to the other-
wise magnanimous history of the Dutch during
that period. He involved himself with his friend,
the great pensionary Barneveldt, in the Arminian
controversy, and in 1619 was condemned to per-
petual imprisonment by the triumphant party.
He was one of those whose prison hours have en-
riched the world, and the quantity of books which
he kept passing to and fro in the end furnished the
means of his escape. It was accomplished by his
wife, Mary Reygersberg, a daughter of one of the
great Dutch aristocratic families, who managed to
have him removed from the prison in one of the
book trunks. The works which he had hitherto
published, scientific, critical, and poetical, are now
comparatively obscure, but in prison he prepared
his little treatise, *De Veritate Religionis Chris-
tianæ*, which has been perhaps the most popular
'Evidences of Christianity' ever published, and has
been translated into every civilized tongue. But
it was when subsequently living in retirement in
France that he published his *De Jure Belli et
Pacis*, the foundation of the international law
and European diplomacy of the seventeenth and
eighteenth centuries. Though it consisted pro-
perly of speculations derived from the principles of
Roman jurisprudence, it was accepted as if it were
the authoritative enunciation of the law of nations.
After having, in his advanced years, visited various
countries, he died on the 28th of August,
1645. [J.H.B.]

GROTTO, LUIGI, an Italian poet, 1541-1583.

GROUCHY, EMANUEL, Count, a marshal of
the French empire, born at Paris 1766, and known
as a brave and successful soldier in the wars of
Napoleon, is chiefly memorable for the fatuity
which seemed to rule his conduct at the battle of
Waterloo. With thirty-five thousand men, and
eight hundred pieces of cannon under his orders,

he remained immovable, either by the prayer
threats of the other generals, in a position w-
could only be justified by the strict letter of
instructions. It is not certain that he inter-
to betray the cause of Napoleon, but his culp-
indecision certainly contributed to the disas-
which befell the French arms. He was twice ad-
wards summoned before a council of war, but e-
time escaped judgment in consequence of
court's declaring itself incompetent. Gro-
was included in the special amnesty of 1815,
restored to his military rank on the accession
Louis Philippe. He died in 1847. [E]

UIDO RENDI, was born at Bologna in 1575, became one of the most distinguished pupils of the Carracci: he lived long in Rome, but settled in his native place, 18th August, 1640.

He painted in various styles, his earlier

was somewhat in the forcible manner of Caravaggio, he afterwards cultivated the ideal, and adopted a rather silvery tone of colour. Guido, though in the receipt of a princely income, from the enormous and constant demand for his pictures, died in debt: he was so embarrassed by his extravagant habits that he used to sell his time at so much per hour to the dealers, who on some occasions, it seems, were so exacting as to stand by him, watch in hand, to see that he performed the stipulated amount of labour. There are eight pictures by Guido in the National Gallery. He formed a considerable school; the most celebrated of his scholars was Simone Cantarini, called il Pesarese, by whom there is a remarkable portrait of Guido in the Gallery of Bologna.—(Passeri, *Vite de' Pittori*, &c.; Malvasia, *Felsina Pittrice*, &c.) GUISE, the name of an illustrious French family, the founder of which was CLAUDE, son of Rene II., duke of Lorraine, who obtained letters of naturalization from Louis XII., in 1506, distinguished himself at the battle of Marignano 1515,

was created duke of Guise in Picardy by Francis I. in 1527, and died in 1550. The duke of Guise having married into the royal family, one of his daughters espoused James V. of Scotland, and became the mother of Mary Stuart. His eldest son, FRANCIS, who succeeded to the dukedom, was one of the most remarkable men of the age, and was king of France in all but the name. He was the chief of the catholic 'League,' opposed to Condé and the Huguenots, and was assassinated 1563. The son and successor of the latter, HENRY DUKE OF GUISE, born 1550, inherited the power and ambition of his father, and was one of the chief actors in the massacre of St. Bartholomew. He was assassinated by order of the king 1588. The brother of Francis, and uncle of Henry duke of Guise, generally known as the CARDINAL OF LORRAINE, was the minister of Francis II. and Charles IX., and like the other members of his family, a cruel bigot and persecutor of the protestants, flourished 1525-1574. CHARLES, the fourth duke of Guise, eldest son of Henry the third duke, and Catherine of Cleves, became one of the chiefs of the League three years after the death of his father, and was gov. of Provence, 1571-1640. HENRY OF LORRAINE, the fifth duke, who became generalissimo of the Neapolitan insurgents in the revolt against Spain, and afterwards grand chamberlain of France, was born 1614, and died 1664. The sixth duke of Guise, known also as LOUIS JOSEPH OF LORRAINE, and prince de Joinville, a military officer under Louis XIV., flourished 1650-1671. GUSTAVUS. The kings of Sweden of this

name are—GUSTAVUS (VASA) I., born elected king by the states after defeating tian of Denmark 1523, abolished the Catholic religion 1529, demanded and obtained succession in his family after subduing the of the Dalecarlians 1555, died 1560. GUSTAVUS (ADOLPHUS) II. See next article. GUSTAVUS III., born 1746, succeeded 1771, shot by Atterbom while preparing to march against the republic 1792. GUSTAVUS (ADOLPHUS) and successor of the latter, and like him, able for his chivalrous spirit and obstinate against the French; deposed and banished country 1809, died in Switzerland, after wading through the greater part of Europe under various names, and in the most straitened circumstances, 1837.

GUSTAVUS ADOLPHUS, born Decem 1594, succeeded his father, Charles IX., throne of Sweden, October 30, 1611. In the part of his reign, the Poles and Russians attacked Sweden; but the young king, putting him at the head of the Swedish army, made a resistance, and ultimately forced his enemies to accede to a peace (1629), by which Sweden obtained an important extension of her territory. At this time the emperor Ferdinand II. was engaged in a policy of persecution against the protestants and the states of Germany. Sweden was an independent protestant country, and could not behold with indifference the rapid strides which the Catholic despot of Austria, aided by the pope, the king of Spain, was making towards the domination of European civil and religious life. Austria had given special provocation to Gustavus by aiding his enemies against him during the war, and he resolved to come forward as the champion of the protestant cause against her.—Gustavus landed in Pomerania on 24th June, with only 8,000 men. He was reinforced by English and Scottish regiments, under the duke of Hamilton; and, at the head of this little force, essayed to rescue the German protestants from the powerful and long-victorious armies of the emperor and the other imperialist generals. Gustavus advanced, and was splendidly successful, though he met death in less than three years from his planting his foot on German ground. Nay, as has well said of him, that 'notwithstanding the shortness of his career, it is one of great ramifications, in consequence of the boldness and rapidity of his movements, and the discipline and invincibility of his troops. Gustavus Adolphus was animated by the principles of Alexander, Hannibal, and Cæsar.' Such is his praise, merely in a literary point of view—his moral glory is still higher. Gustavus, in 1630, conquered Rugen and Pomerania. In the following year he formed an alliance with the Saxons, and completely defeated the Austrian army under Tilly at Leipzig. He then effected a second overthrow near the river Lech, in 1632, Tilly was slain; and all Germany was now open to the Swedish arms. The Austrian emperor recalled his celebrated general Wallenstein to the Roman Catholic troops; and the Swedish king fought his third great battle against the imperialists under Wallenstein's command at Lützen, November, 1632. Gustavus gave out a Latin hymn to his army before engaging; he le

ds himself; and then he led his cavalry into critical part of the fight. He was shot dead y in the battle, but his army gained a complete ory.—Gustavus Adolphus was simple in his its, pure and just in all his dealings, and un- nedly earnest in his religion. He was inade- quately praised when he was named 'one of the best n that ever wore a crown.' [E.S.C.]

GUYON, CLAUDE MARIE, a French historian, author of a 'History of Empires and Republics,' &c., 1699-1771.

GUYON. MADAME JEANNE MARIE ROUVIERS DE LA MOTHE GUION, or GUYON, was a French lady of good family, born at Montargis 1642, where also she was married at the age of fifteen, and in thirteen years afterwards left a widow with three children. Her marriage was not a happy one, in consequence of the tyranny of her husband and mother-in-law, who, acting under the advice of her confessors, endeavoured to withdraw her from the inward prayer and retirement to which, at the age of twenty, she began to addict herself. On the death of her husband she sequestered the greater part of her fortune as a provision for the education of her children, and completely abandoned herself to the life of mystic piety, or 'perfect contemplation,' generally known as Quietism, and of which we shall give an account in the article MOLINOS. Her experiences are related with extraordinary candour and graphic simplicity in her 'Autobiography,' and are further illustrated in the 'Torrents,' written at Annecy, and contained in the 2 volumes of her 'Opuscules.' She was at Grenoble, on her way to Paris, when she found herself 'suddenly invested,' as she expresses herself, 'with the apostolic state,' and able to discern the condition of those that spake with her, so that, one sending another, she was occupied from six in the morning till eight at night speaking of divine things. 'There came,' she says, 'great numbers from all parts, far and near, friars, priests, men of all sorts, young women, married women, and widows; they all came one after the other, and God gave me that which satisfied them in a wonderful manner, without my thinking or caring at all about it. Nothing was hidden from me of their inward state and condition. . . . I perceived and felt that what I spake came from the fountain-head, and that I was only the instrument of Him who made me speak.' On reaching Paris she was thrown into prison, loaded with the vilest calumnies, by the connivance of her friends the priests, and endured altogether not less than twenty years of persecution, confinement, and exile. The great enemy of Madame Guyon and the system of Quietism was Bossuet, while for her champion she had the noble-hearted, eloquent, and illustrious Fenelon. She was liberated from her last confinement, in the Bastille, in 1702, and passed the remainder of her life at Blois, where she died 1717. Her complete works were published by Poiret in 39 vols. 8vo, and they comprise, besides those mentioned above, 'The Song of Songs, Interpreted According to its Mystical Sense,' and several volumes of hymns remarkable for their graceful composition, and exquisite sensibility. Some of these were translated by Cowper.—The life of Madame Guyon is not only a religious study, but a psychological one of very considerable interest. It is the history of a soul, humbled and polluted in its own sight, journeying through the gates of the mystic death, hating its own freedom and its own intelligence, struggling through the unclean places through which it is forced to pass, and at last arriving in the presence of its Divine lover—stripped of

all, even its virtues—as serene, as motionless as the eye of eternity. Though the system of Quietism is a protest against visions, revelations, ecstasies, and transports of all kinds, whether sensual or spiritual, yet the experiences of Madame Guyon are really a love story, and one which she pursues in her writings with a fearlessness as remarkable in such a woman as the purity of her imagination.

HAHN, S. F., a German historian, 1692-1729.
HAHNEMANN, SAMUEL, the founder of homopathy, was born of poor parents at Meissen, in Saxony, 1755, and received his diploma as doctor physic at Heidelberg, in 1781. The same year he was appointed district physician at Gomehn, near Magdeburg, and continued his studies in chemistry and mineralogy with all the ardour of an enthusiast. In 1784, he removed to Dresden, and soon afterwards abandoned the practice of physic in disgust, and confined himself to his private researches in chemistry and literature. These studies began to acquire a fixed direction in 1790, and in 1796 he commenced the record of his results in the journal of his friend Hufeland, an article entitled 'Essay on a New Principle, &c.' In 1805 he published his 'Medicine of Experience,' and in 1810 his 'Organon of Rational Medicine,' in which the new doctrine was reduced to a system, and methodically illustrated. In a second edition, published 1819, the title of this work was abbreviated, and became the 'Organon of Medicine.' A third edition appeared in 1824, and was translated into English nine years afterwards. It was followed by a fourth edition in 1829, and a fifth in 1833 (translated by Dr. H. J. Cooke), each of which embodied fresh results, and enlarged the field which this indefatigable experimentalist had undertaken to cultivate. While he and the other works of the author mentioned below were making their way silently over Europe, Hahnemann himself was experiencing the usual fate of the world's benefactor. In 1813 he had moved from Dresden to Leipzig, where he was persecuted by the apothecaries as an empiric, and he had risen to such a height by 1820, that he was glad to avail himself of the protection offered him by the duke of Anhalt Cothen. In the same year he published his 'Pure Medicine' in 6 vols. 8vo, and in 1829 his 'Theory of Chronic Diseases, and the Proper Medicines for them,' in 6 vols., which were enlarged to 6 vols. in a second edition, 1840. In the meantime, his domestic circumstances were changed for the better by his marriage in 1835 with a French lady, in whose company he removed from Cothen to Paris, at the age of eighty. Hahnemann remained in Paris till his death in 1843, and had the satisfaction to hear that homoeopathy was about to have a chair at the University of Vienna, and that hospitals were proposed in London, in Berlin, and in many cities of Austria. The principles of his therapeutic system—for such it undoubtedly is—may be described as a recognition of derangements in the vital or spiritual force of the body, whether occasioned or not by material influences, as the 'primary causes' of disease; the cure of which is by the reaction of the vital force against the remedy. The application of this theory consists—1st, in the discovery; and 2d, in the preparation of specific remedies corresponding to every species of morbid action, and such remedies are found both in theory and practice to be the *assimilates* of the disease—or medicines by which precisely the same symptoms would be produced. The reason of the cure is difficult to express in few words, and illustrations far below the refined

philosophy on which it depends have been used by professional writers. According to the terms of the theory, the medicines may be considered as diffusing themselves with a gentle but irresistible force, like that of light, between the mortal corruption and the vital spirit in combat with it, and being more subtle than the disease, and yet like it, they engage the vital force in a quicker and more decisive conflict, and then gradually yielding before it, as their own virtue expires, the vital force is liberated, and, as a matter of course, resumes its normal action. This explanation, however, is only half the truth, for it is well known that fluids in effervescence are reduced to rest by the satisfaction of what may be called the hunger of one body for another, and something of this kind may take place when the assimilate is introduced to the disease. Be the explanation what it may, the discovery of the facts by years of patient and often painful experience, is the title of Hahnemann to the gratitude of society. He proved the virtue of an immense number of assimilates by testing their effects on himself and friends, and displayed equal art in the method of their refinement. His 'Organon of Medicine' not only raises the art of healing to the rank of an exact science, but renders it an elegant and philosophical study; while the facilities of its practical application have been carried to such perfection, especially by his followers in this country, that many mothers of families have become expert homoeopathic physicians, and rarely require the aid of a practitioner. Besides the works mentioned, Hahnemann is the author of some two hundred treatises on medical and physical science. [E.R.]

HALDANE, ROBERT, ESQ., was the eldest son of James Haldane Esq., of Airthrey in Stirling, and Catherine Duncan, sister of the hero of Camperdown. He was born in London, 28th February, 1764. Both of his parents having died at an early period, he and his brother were placed under the guardianship of their maternal uncles at Lundie. Thence they were removed to the High School, and subsequently studied for a few sessions at the university of Edinburgh. Although heir to a large property, Robert's active and enterprising mind pointed to the naval profession, and so passionate a desire had he conceived for a seafaring life, that his friends at length gave their consent, and he entered the Monarch as a midshipman under the command of his uncle. Subsequently he was connected with Sir John Jervis as an officer on board the Foudroyant, and both from his energy of character, and his familiar knowledge of the French language, was intrusted with many difficult and delicate commissions during the war. On the re-establishment of peace in 1783, Mr. Haldane transferred his services for a time to a commercial company, for whom he performed a voyage to Newfoundland, and a second to Lisbon; returning to Scotland, he relinquished

the naval profession, and established himself at Airthrey, where for a period of ten years, he followed the pursuits of a country gentleman, his whole time being occupied in the improvement of his estate, or in the management of county and parochial affairs. Like many persons of an ardent temperament, he welcomed with enthusiasm the outbreak of the great French revolution, and in the excitement produced throughout this country by that political convulsion, roused against himself, by the too open avowal of his opinions, the jealousy and suspicion of the ruling party. A subject of infinitely higher moment than politics, however, now began to engross his attention. Led to the serious study of religion, he conducted his inquiries with characteristic ardour and perseverance, till having at length attained to enlightened and mature views of Scriptural truth, he appeared before the world an evangelical Christian. His pursuits as well as his character were entirely changed, and he resolved on dedicating his future life to diffuse, as a missionary in foreign lands, the gospel which had imparted so much peace and joy to himself. India was the chosen field of labour, and having secured the promised co-operation of Messrs. Innes, Ewing, and Bogue of Gosport, to whom he guaranteed adequate stipends while abroad, and the sum of £3,500 if compelled by bad health or other causes to return, he applied to the Indian government to sanction his enterprise. Missions being at that time scarcely known in the country, it was suspected that some sinister object was concealed under the name, and the court of the East India Company Directors, after much deliberation, resolved that the superstitions of Hindostan should not be disturbed. Disappointed in this bold and original scheme of Christian benevolence, Mr. Haldane determined to employ his resources in spreading the gospel at home, and in conjunction with Rowland Hill, Mr. Simeon of Cambridge, and others, he produced an extraordinary revival of religion throughout Scotland. Mr. Haldane now seceded from the Established Church, and at his own expense, erected places of worship under the name of Tabernacles in all the large towns, and educated 300 young men under Dr. Bogue and Mr. Ewing, as preachers to officiate in these meeting-houses. Another scheme which originated with him had for its object the evangelization of Africa. To commence this undertaking, he procured thirty young children to be brought from Sierra Leone to receive a Christian education at his expense, and gave a bond for £7,000 for their board and education, which, however, the friends of emancipation in London undertook to defray. Many other plans of Christian usefulness both at home and on the continent are traceable to the untiring zeal of this pious gentleman. His personal labours in awakening a religious spirit in the south of France, were successful beyond his own most sanguine expectations; and both at Geneva and Montauban, he sowed the seeds of truth which are bearing good fruit to this day in the protestant churches of France. Mr. Haldane took a prominent part in the management of the Continental Society and the Bible Society of Edinburgh; and in the painful controversy relative to the circulation of the Apocrypha by the British and Foreign Bible Society, which led to the establishment of the latter. He was

the author of 'The Evidences of Christianity,' 'Exposition of the Epistle to the Romans,' and various other religious works of minor importance. His character was highly esteemed during his life, and his name will be transmitted to posterity in connection with the revival of evangelical religion in Scotland at the beginning of the present century. He died 12th December, 1842. [R.]

HALDANE, JAMES ALEXANDER, ESQ., younger brother of the preceding. He was born at London, 14th July, 1768. Having imbibed the feelings of passion for the sea, he was entered in his seventeenth year a midshipman in the Duke of Melrose, bound on a voyage to Bombay and China. He had made three other voyages to the same countries, when having proved his possession of the requisite qualifications, he was appointed captain of the Melville Castle. The vessel, however, did not sail for four months; and during that interval, a great change took place in Captain Haldane's character. He became serious and thoughtful on the subject of religion; and having determined to follow the example of his brother who had already relinquished the seafaring life, he disposed of his command for £9,000, and his share in the property of the ship and stores for £6,000 more. With this fortune of £15,000 he retired with his wife to Scotland in 1794, and gave himself up to those religious inquiries which now crossed his chief concern. Several years elapsed before his views were established. But at length he attained to a knowledge of the truth as well as peace in believing; and the cases of both his brothers Haldane, whose minds retained a deep impression of their mother's piety and piety, must be added to the long list of testimonies which might be adduced to show the advantages of early religious education. Mr. James Haldane, having plenty of time at command, occupied himself with many plans of Christian usefulness amongst which, the opening of Sabbath schools and itinerant preaching, at first in the villages around Edinburgh, and afterwards in the large towns of Scotland, were the chief. His principal coadjutor in these labours of love was John Campbell, the African traveller. In company with that zealous Christian, Mr. Haldane made successive tours throughout all Scotland far as Orkney; and those who were awakened by their preaching, were, through the liberality of Robert Haldane, accommodated with suitable places of worship. Mr. James eventually accepted the office of stated pastor in the Tabernacle, Leith Walk, Edinburgh; and in that capacity he exercised, without any emolument, all the public and private duties of a minister with unbroken fidelity and zeal for a period of fifty years. Although he vacillated on some points of church government, he and his brother remained steadfast in their adherence to the general principles of the Scotch baptists. He was the author of various fugitive pieces on the religious controversies of the time. But the memory of his name in the world, will be preserved chiefly by the 'living epistles,' which were the fruits of his evangelical labours. He died in Edinburgh, 8th February, 1851. [R.]

HALDE, JOHN BAPTIST DU. See DUHALDE.
HALE, SIR MATTHEW, a judge and constitutional lawyer, was born in Gloucestershire on

November, 1609. Brought up among the puritans, while receiving an Oxford education, his early life seems to have vibrated between rigidity and excess. It was through the auspices of Serjeant Glynn that his attention was turned to the bar, and he entered at Lincoln's Inn in 1629. In the stormy times which followed, he held a more conspicuous place than one of his neutral and studious character generally obtains amid political convulsions. He was a hard student, and a thorough lawyer, both in the constitutional department and that of private rights and obligations. In 1653 he was made one of the judges of the Common Bench, it was termed under the Commonwealth. His round excuse for accepting this appointment, that the administration of justice is an honourable and useful occupation, whether the ruling power for the time be valid or not, has been often cited. His friends said less for his candour and honesty when they defended him, on the ground that he had evaded any formal announcement of allegiance to the Protectorate. He seemed to have misgivings of his own, for he at one time refused to act as a criminal judge while performing his civil functions, and he would not hold office under Richard Cromwell. Indeed, with all his capacity and his incorruptible honesty, a rare quality on the bench in his day, it is shown by his superstitious cruelty on a celebrated witchcraft trial, and by other incidents, that his mind was subject to wayward caprices. He was made chief baron of the exchequer at the Restoration, and chief justice of the King's Bench in 1671. He d. in 1676. [J.H.B.]

HALES, ALEXANDER, an English friar, dist. as a scholastic divine and philosopher, 13th cent.

HALES, JOHN, an able scholar and divine of the Church of England, remarkable for the freedom of his opinions, and for that reason classed among the latitudinarians. He was born at Bath in 1584, and educated at Oxford, where he became professor of Greek, and assisted Sir Henry Savile in editing his edition of the works of Chrysostom. After a life of considerable hardship, partly occasioned by the civil wars, and partly by his independence of thought, he died at Eton, in poor circumstances, 1656. The writings by which he is known were published after his decease, and entitled 'Golden Remains of the Ever Memorable Mr. John Hales of Eton College.' Among these papers is an interesting account of the Synod of Dort, at which Mr. Hales was present as an observer. At this synod the representatives of the English Church advocated the universality of the redemption, and their arguments had the effect of rousing Hales from his previously rigid Calvinism. There is a quaintness and vigour in his style of writing which gives a somewhat flavourish quality to his 'Golden Remains,' and though he has been called a trimmer, he is often severe enough upon the formalists of his day. HALES, or HAYLES, JOHN, a classical scholar, translator, and government employé, d. 1572.

HALES, STEPH., an Eng. nat. phil., 1677-1761.

HALFORD, SIR HEN., Baronet, an eminent physician, whose paternal name was Vaughan, au. of numerous professional works and essays, 1766-1844.

HALHED, NATHANIEL BRASSEY, an Oriental scholar, au. of a 'Bengalee Grammar,' 1751-1830.

HALI-BEIGH, a Polish captain, educated in Turkey, and distinguished as a linguist, died 1675.

HALIFAX, GEORGE SAVILE, marquis of, a celebrated English statesman, promoter of the restoration, president of the council in the time of James II., and lord privy seal under William and Mary. He is the author of various small works, 'The Character of a Trimmer,' 'Advice to a Daughter,' 'The Anatomy of an Equivalent,' &c. Lord Halifax was also the author of 'Memoirs,' which were destroyed in MS., 1630-1695.

HALKET, LADY ANNE, an English lady, remarkable for her studies in theology and medicine, author of 'The Mother's Will,' &c., 1622-1699.

HALL, ANTHONY, a learned divine, 1679-1723.

HALL, CAPTAIN BASIL, a well-known writer of voyages and travels, descriptive of his adventures and the places visited, chiefly in the Indian seas, and the southern coasts of America. Born at Edinburgh 1788, died in confinement on account of insanity, 1844.

HALL, EDWARD, an English annalist, d. 1547.

HALL, GEORGE, son of Joseph Hall, and bishop of Chester, author of sermons, &c., 1612-1668.

HALL, HENRY, a learned divine, 1716-1768.

HALL, SIR JAMES, baronet of Dunglass, au. of an 'Essay on Gothic Architecture,' &c., 1760-1832.

HALL, JOHN, an English poet, 1627-1656.

HALL, JOSEPH, D.D., the pious bishop of Norwich, was born at Ashby-de-la-Zouch, in the county of Leicester. Directing his views towards the Church of England, he was entered a student of Emmanuel College, Cambridge, and in the course of time obtained a fellowship. It was during his residence in that seat of learning, he published his satires and many other poetical pieces, which spread his fame far and wide. But he abandoned the muses, having resolved to devote his chief attention to divinity, and in due time, being licensed to preach, was appointed rector of Halsted in Suffolk. In that rural retreat he composed his 'Contemplations,' which procured him the patronage of Prince Henry, and the rectory of Waltham. He was ere long called to mourn over the untimely death of that excellent prince and to preach his funeral sermon, which has been preserved in the collection of his published writings, and abounds with passages of touching pathos and fervent piety. Mr. Hall was a man of very devotional habits, to fortify which he made a most rigid distribution of his time, having set hours for prayer, for reading divinity, for general literature and composition; and so intense was his ardour in the pursuit of intellectual and spiritual improvement, that for a time he observed the strictest abstemiousness, taking for a while only one meal a-day.—In 1616, he went to Paris as chaplain to the English ambassador. On his return he was appointed by King James to the deanery of Worcester, and in the following year he accompanied his royal master into Scotland, when that monarch made a progress into the northern part of his kingdom to prosecute his imprudent scheme of erecting episcopacy on the ruins of presbyterianism. None of the unpopularity, however, of that measure fell upon Hall, whose pious character and temperate principles secured him the esteem and respect of the most eminent Scotchmen of the day. From leaving Scotland, he was commanded to go over

into Holland to attend the Synod of Dort, which was held in 1618. But the protracted meetings of that famous convocation made a sad inroad on his health, and after an assiduous attendance of two months, he returned with an impaired constitution to England. The prominent part he had taken in the councils of that body, may be judged of by the fact that a medal commemorative of the assembly, was by the unanimous vote of the members, awarded and sent to him. He had no small share in achieving by his arguments and eloquence the signal discomfiture of the Arminians, and the condemnation of their doctrines in that Synod.—Dr. Hall, for he had obtained the degree of D.D., being now a leading man in the Church of England, was marked out for promotion, and accordingly he was raised first to the see of Exeter, and afterwards, without any solicitation, to that of Norwich. Amid all the ecclesiastical tyranny of Laud, Bishop Hall preserved his moderation, and the clergy of his diocese were kept from the odium as well as the penalties of the Book of Sports. The bishop, however, had his season of trial. When the popular outcry 'No Bishops' was raised, and an armed mob marched against the House of Lords, Hall with eleven of the lords spiritual joined in protesting against the measures which were passed in their absence; and this document having been made a ground of impeachment, he with his protesting brethren were consigned to the Tower. On his liberation, he continued for a year to exercise his episcopal functions in Norwich; but the popular tide again set in strongly against his order, his house was attacked, his property sequestered, himself insulted, and in meek resignation he retired into a small lonely place in Norfolk, where he spent the remainder of his days in acts of piety and charity, and at length died 1656, in the eighty-second year of his age. HALL, RICHARD, a Roman Cath. wr., d. 1604.

HALL, ROBERT, a medical author, 1763-1824.

HALL, REV. ROBERT, the most eloquent preacher of modern times, was born at Arnsby, a village in the neighbourhood of Leicester, in 1764. His father was a baptist clergyman, and both his parents were distinguished for talents, prudence, and piety. Robert, the youngest of fourteen children, was of so feeble a constitution, that he could neither speak nor walk till near three years old. He learned to read by the inscriptions on the grave-stones; and he showed at a very early age a passionate fondness for reading, and used to recline for hours with a book on the grass; a habit which is thought to have produced that excruciating pain in the back to which he was subject during life. Even while yet a boy, Edwards on the Will and Butler's Analogy were his favourite books; and he would analyze as well as discuss them with great intelligence at the age of nine. His classical master dismissed him from school at eleven as already beyond the range of his own acquirements. He was in fact a young prodigy of genius and knowledge, and these precocious talents were combined with such genuine piety, that he was placed under the care of the Rev. John Ryland, tutor of the Baptist Academy, and at the age of sixteen, he was 'set apart' to the office of the ministry by his father in presence of the congregation at Arnsby. In pursuance of his ministerial

views, he went to study at the university of Aberdeen, where he enjoyed the prelections of Beattie, Campbell, and Gerard, and where he made the private friendship of Mr. afterwards Sir James Mackintosh. He was noted among his fellow students as much for his habitual piety as for his pre-eminent talents. On the completion of his college studies, Mr. Hall engaged himself as classical tutor in the Baptist Academy at Bristol, at the same time acted as assistant to Dr. Evans in Broadmeadow chapel. At the end of five years he removed to Cambridge, where he became assistant, and afterwards successor to the Rev. Mr. Robinson in the baptist church in that city. It was by his eloquent and elaborate discourses prepared for the meridian of that seat of learning, he rose to the foremost rank of British preachers. His pulpit and occasional sermons were attended by crowds of the professors and young men, many of whom sought and valued his friendship, dissenter though he was, amongst whom was the celebrated Dr. Parr. In Cambridge some of his greatest works were composed and published. His 'Christianian Consistent with the Love of Freedom' in 1791, his 'Apology for the Freedom of the Press' in 1792, his far-famed sermon on 'Modern Infidelity' in 1799, his 'Reflections on War' in 1802, and his 'Sentiments Suitable to the Present Crisis' in the year following. These were politico-religious discourses, occasioned by the critical circumstances of the country at the beginning of this century, as they touched a chord in every patriotic heart. But while they evince the great powers of argument and eloquence that so greatly distinguished Mr. Hall, they must not be considered samples of the food with which he fed his people. His ordinary discourses, though always replete with genius and eloquence, were evangelical, calculated to edify his people both by enlarging their Scriptural knowledge, and stimulating their faith and piety.—In 1804, when he was at the very height of his reputation, the mind of this extraordinary man suffered a sad eclipse, and yet at intervals during the progress of his distressing malady, his genius shone forth by sparks of surpassing power and brilliance. His congregation showed their strong attachment, and sympathy by raising an amount of £100, for another of equal amount to be given to his family in the event of his death. Although he recovered yet partial symptoms of the disorder discovered in himself, his connection with the congregation in Cambridge was dissolved, and he was placed in the hands of his friends in the private establishment of Dr. Arnold of Leicester, by whose skilful and judicious treatment, his health was soon re-established, and he resumed his preaching by itinerating through the villages around Leicester. He became settled pastor of a church in Leicester, the same chapel in which the celebrated Dr. Carey had once officiated, and there by the splendour of his public ministrations, his fame as a public orator was extended more widely than ever.—But Mr. Hall was not allowed to continue in that comparatively limited sphere. On the death of Dr. Ryland, he was urged to undertake the pastorate of the large and flourishing baptist congregation in Bristol, and that city he accordingly removed, all classes hail- ing his arrival with enthusiastic joy. After labouring five years in that important sphere with un-

valled success, his health gave way. A spasmodic affection in the chest, added to his old constitutional complaint in the back, rendered him unfit for public duty. The unfavourable symptoms continued to increase in spite of all the medical skill that was enlisted in his behalf, and after a brief illness of ten days, this splendid orator and eminent servant of Christ, died in February, 1831, in the sixty-seventh year of his age. HALL, THOMAS, a learned nonc., 1610-1665.

HALLE, CLAUDE GUY, a French painter and director of the Academy, 1652-1736. His son, JOEL, a painter and superintendent of the Gobelins, 1711-1781. The son of the latter, JOHN JOEL, a physician and medical writer, 1754-1822.

HALLE, PETER, a French *savant*, 1611-1689.

HALLENBERG, JONAS, a Swedish historian and naturalist, au. of a hist. of Swed., 1748-1834.

HALLER, ALBERT, M.D., a learned and eminent anatomist and physiologist of last century, was born at Berne, in Switzerland on the 18th October, 1708. He was the son of Nicholas de Haller, an advocate, and chancellor of the county of Baden, and exhibited in early life very precocious powers, particularly in the acquisition of languages; having at the age of nine composed for his own use a Chaldaic Grammar, a Hebrew and Greek Lexicon, and an Historical Dictionary containing upwards of 2,000 articles. He was originally destined for the church, but subsequently turned his attention to medicine, which he studied under Camerarius and Duverney at Tubingen, and afterwards at Leyden under Boerhaave, where he was the associate of Albinus and Ruysch, and where also he graduated as a doctor. After visiting England and France, he returned to Berne in 1730, and in 1734 was appointed teacher of anatomy in that city; but his reputation having greatly extended, he was nominated Professor of Anatomy, Surgery, and Botany, in the university of Göttingen by George II. of England in 1736. Here he remained for seventeen years, and here his great work, *Disputationes Anatomicae Selectae*, by which he is chiefly known, was composed. He refused the chair of botany in Oxford, and he declined solicitations from the king of Prussia, the states of Holland, and the empress of Russia. George II., in consideration of his great merits, obtained for him a brevet as a noble of the empire, and he is often spoken of as Baron Haller; but he never used this title in his native country. He left Göttingen for Berne in the year 1753, and spent the rest of his life in honourable but active retirement in Switzerland. He died at Berne on the 12th of December, 1777, in his seventieth year. [J.M.C.]

HALLET, Jos., a learned dissenting minister, auth. of 'Discourses on the Miracles,' 1692-1744.

HALLEY, EDMUND, a celebrated astronomer, was born in London on the 8th November, 1656. His father, who was a soap-boiler, sent him to St. Paul's school, where he acquired such a taste for astronomy that before he left school he made observations on the variation of the needle. In 1673 he entered Queen's College, Oxford, and while there devoted himself almost exclusively to mathematics and astronomy. In 1676 he published his first paper in the Philosophical Transactions on the orbits of the primary

planets, and such was the reputation it acquired him, that he was soon after sent by Charles II. to St. Helena to make a catalogue of the stars of the southern hemisphere. In the course of two years he completed this arduous task, and in 1679 he published his 'Catalogue of the Southern Stars.' In 1678 Halley was elected a fellow of the Royal Society, and in the following year he went to Dantzic to settle the controversy between Hooke and Hevelius respecting the use of telescopic sights in astronomical observations. After performing the tour of Europe in 1686 with his friend Mr. Nelson, the author of 'Fasts and Festivals,' during which he made observations on the great comet in the observatory of Paris with Cassini, he returned to England, and married the daughter of Mr. Tooke, auditor of the exchequer, with whom he lived happily for fifty-five years. In the Philosophical Transactions for 1683 he published his 'Theory of the Variation of the Magnetical Compass,' in which he considers our terrestrial globe as one great magnet, with four magnetic poles near the north and south poles of the earth, the needle being always governed by the nearest of these poles.—In consequence of the bankruptcy of his father, our author's pursuits were for some time interrupted; but he soon returned to his studies, and was led in 1684 to examine Kepler's laws of the planetary motions, from which he drew the inference that the centripetal force must vary inversely as the square of the distance. Being unable to prove this geometrically, he applied to Dr. Hooke and Sir Christopher Wren for assistance; but having failed to obtain it, he set out for Cambridge in August, 1683, to consult Mr. Newton, who had by this time made great progress in establishing the doctrines of the *Principia*. Halley was delighted with his reception, and the good news that Newton had brought the demonstration of the laws of the celestial motions to perfection. Newton, however, could not lay his hands upon the papers, but wrought them over again, and sent them in November to Halley by Mr. Paget, in the form of four theorems and seven problems. Upon receiving them Halley took another journey to Cambridge in order to confer with their author on the subject, and we find him on the 10th December giving an account to the Royal Society of the curious treatise 'De Motu,' which Newton had shown him, to be entered upon their register. At a later period Halley prevailed upon Newton to complete his '*Principia*,' the first book of which was exhibited to the Royal Society on the 20th April, 1686. It was put into the hands of Halley, then clerk to the Society, to report upon it; and at a subsequent meeting on the 2d of June, Halley undertook the task of correcting the press, and of printing it at his own expense.—In 1686 our author published an account of the trade winds and monsoons on the seas near and between the tropics, which was followed by several other chemico-meteorological papers, in one of which, 'On the Circulation of the Watery Vapours of the Sea, and the Origin of Springs,' published in 1691, he first pointed out that beautiful provision, in consequence of which, a constant circulation of water is kept up between the atmosphere and the ocean.—In 1691 he published a paper on the conjunction of the superior planets, in which he showed, as

James Gregory had done long before, the utility of observing these conjunctions in order to determine the sun's parallax and distance from the earth.—In the year 1691 Halley became a candidate for the Savilian chair of astronomy at Oxford, and was opposed by David Gregory, who was the successful competitor. His failure on this occasion arose, according to Whiston, from his maintaining infidel opinions, and being generally regarded as a sceptic and a 'banterer of religion.' The same charge was preferred against him by Flamsteed, and Newton is said to have often reproved him for his infidelity. There is reason, however, to believe that the charge of infidelity was founded on his having persisted in maintaining, as every philosopher and intelligent divine does now, that there was a pre-adamite earth, out of the ruins of which the present earth was made; and that he only laboured under imputations which have been often made since his day upon every distinguished individual who maintains great truths that appear to be inconsistent with the literal interpretation of Scripture.—In 1692 Halley published his *Hypothesis Relative to the Change in the Variation of the Needle*, in which he supposes an interior globe with magnetic poles to move within our earth, and to produce the variation by the change in the relative position of the external and internal poles.—In order to put this theory to the test of observation, he conceived the design of obtaining measures of the variation of the needle in different parts of the world. For this purpose King William appointed him captain of the *Paramour Pink*, in which he set sail on the 20th October, 1698, but after sailing along the coasts of Africa and America, a spirit of mutiny arose among his officers, and he returned to England in July, 1699. Having resumed his voyage, and finished his experiments, he returned on the 7th September, 1700, and was rewarded with the title of captain of the navy, and with half-pay during life.—On the recommendation of Queen Anne, the emperor of Germany consulted him on the formation of a harbour on the coast of Dalmatia, and he went twice to the Adriatic on that errand. The emperor when he saw him at Vienna presented him with a rich diamond ring, taken from his finger, and wrote a letter in his own hand recommending him to Queen Anne.—On the death of Dr. Wallis in 1703, Halley was appointed Savilian professor of geometry at Oxford, and forgetting, or rather perhaps having discovered the falsehood of the charge of infidelity which had formerly been made against him, the university conferred upon him the honorary title of Doctor of Laws. In furtherance of the plan recommended by Sir Henry Saville, he began, in conjunction with Dr. Gregory, to publish the works of the ancient geometers, and several of the writings of Apollonius and Serenus, translated and edited by them, appeared in 1706 and 1710.—Upon the death of Sir Hans Sloane in 1713, he was elected secretary of the Royal Society, and while he held this office he made a number of interesting experiments on the diving bell at great depths in the sea, which were described in the *Phil. Trans.* for 1716, under the quaint title of 'The Art of Living under Water.' When the important office of astronomer royal became vacant in 1719, by the death of Flamsteed, Halley was appointed

his successor, and though he had now reached the sixty-fourth year of his age he continued for twenty years without the aid of an assistant to carry on the operations of the observatory with the most unremitting assiduity. In 1731 he published his 'Proposal for Finding the Longitude at Sea within Degree,' a method which he had suggested so early as 1683, in an appendix to the second edition of Street's 'Caroline Tables.' In 1725 he drew up his tables for computing the places of the planets; but he delayed their publication till he was enabled by new observations to make them more perfect. They did not, however, appear till 1749, after his death; but they were long regarded as the most complete and accurate till they were superseded by others founded on newer and more accurate observations. In 1729 Halley was elected a foreign member of the Academy of Science in Paris. In 1737, when he was eighty-one years of age, he was struck with paralysis in his right hand, but he continued to attend the Royal Society Club at its weekly meetings. The disease now gained ground upon him, and he gradually lost his strength. He was sustained chiefly by the cordials given him by Dr. Mead, and one day being tired of taking them, he asked for a glass of wine, and as soon as he had drunk it he expired in his chair without a groan, on the 14th January, 1742, in the eighty-sixth year of his age. He was buried in the churchyard of Lee and as he had himself requested, in the same spot with his wife, whom he had lost a few years before. His eldest daughter was buried in the same place in 1743. Besides this daughter he had other two and several children who died in infancy. One of his sons, who lived to manhood, died long before his father. His two surviving daughters erected over his remains a handsome tomb of Portland stone. M. Mairan, who wrote the eulogy upon Halley, which was read to the Academy of Sciences in 1742, concluded with the following just appreciation of the universality of his acquirements:—'While we thought the eulogium of an astronomer, a naturalist, a scholar, and a philosopher, comprehended our whole subject, we have been insensibly surprised with the history of an excellent mariner, an illustrious traveller, an able engineer, and almost a statesman.' Notwithstanding the copious details regarding the life of Halley given in the 'Biographia Britannica,' a good life of that distinguished individual is greatly to be desired, and we trust that the Rev. M. Rigand of Ipswich will find leisure to fulfil the intentions which his distinguished father had so much at heart. [D.B.]

 HAMILTON, SIR WILLIAM, Bart., of Preston, county of Haddington, one of the many talented catchmen distinguished by labours in Mental Science. The family of Hamilton, which he represented, sprang from Sir Gilbert de Hameldon, founder of the House of Hamilton in Scotland, a staunch cavalier who obtained his patent of creation in 1673. Sir William was third Baronet in possession and eighth *de jure*. He was born in Glasgow in 1791, and educated at Oxford, where he obtained first-class honours. He was admitted a member of the Scotch bar in 1813, became a contributor to the Edinburgh Review, and for the last twenty years of his life filled with great success the chair of Logic and Metaphysics in the University of Edinburgh. He died on the 6th May, 1856.—The following sketch was written during his lifetime:—It is now long years since Sir William Hamilton had achieved a name for Encyclopaedical Learning in everything related, however remotely, to the history and condition of Mental Science; and certainly no other, in modern times, could readily be specified, with attainments of this description at all equivalent to his: nevertheless—at least until recently—it was known only by the few, that to acquisitions so various and vast, our countryman adds the power to marshal and command them all; and that his training, however immense, is used by him simply as an instrument whereby to rear and consolidate a great and symmetrical body of thought. Rarely indeed has the thirst unquenched for what in common speech is termed *à posteriori* knowledge, been combined with so sig-

nal a development of *à priori* power: it seems the pre-eminent characteristic of our philosopher's mind, that these two *factors* of all Science, exist in it together—in full and symmetric integrity. No problem is resolved in his view, or even rightly laid for explication, until, in the first place, a complete scheme has been constructed of all its possible solutions, and the contributions of every former thinker arranged under due heads, and made to bring out their partial light: a step, preliminary indeed, but which can never be accomplished until the problem has passed through the mind, under the chief forms in which History presents it, and its fundamental conditions in all their purity and breadth been discerned. Few exercises are more pleasing than to follow Hamilton, as with eager and scrupulous conscientiousness he gathers together the scattered hints of his predecessors, assigns them their place, and marks them with their value: his intense Love of Truth rises into the form of Justice: great popular names never pass with him as badges of desert; nor is any one so obscure—to whom a fragment of truth has in any form ever appeared—that he may not be surrounded with his regard. A character so thorough, and, in the highest sense, *veracious*, must have at its root—assuredly as its concomitant—a clear and energetic moral nature; nevertheless, the source of its strength, in this instance, is manifestly what we have stated—an earnest and unfaltering love of truth, and faculties harmonized to discern it. Regarding Philosophy as man's highest intellectual attainment, must not all true workers appear as one brotherhood? Believing the conquest of august problems concerning Knowledge and Being, to be the Olympic prize of our Human Reason, shall the Runner not welcome every aid to his strength, or shall he expect that anything but *strength* can help towards the goal? Fortunate, if at a time when languor and dissolution threaten Philosophy once more, and reputations are sought and won through picking up and vending its mere *flotsam* and *jetsam*—our Youth might haply attain skill in Method, increase in Sincerity, and learn the dignity of intellectual toil, through the example of Hamilton!—Let us briefly glance at the leading provinces occupied by our Philosopher. 1. It is not unknown how important a share of modern speculation has been devoted to the subject of *Perception*, since the times of Reid. Not in this country alone—not even especially in this country; for some *critique* of the Act of Knowing, is at the basis of all recent German Systems. As customary with him, not confining his regard to modern times, but surveying philosophical history from Plato downwards, Sir William, in his remarkable papers on *Presentation* and *Representation*, appears for the first time to have laid or constructed the full problem, and to have resolved it. The solution was, amongst ourselves, peculiarly opportune, arriving to discredit and destroy the confusion threatened by the rash but imposing ignorance of Brown; nor was it less opportune abroad, inasmuch as it once more restored '*Natural Dualism*' to its sovereignty in Thought, and revealed the form of the gratuitous hypothesis that from earliest times had impelled men in vain search of schemes of *Unity* and the *Absolute*. Despotically, as the maxim of the im-

mobility of the earth ruled in Astronomy until the time of Copernicus, and equally unquestioned—the maxim that *'like only can know like,'* seems to have governed all theories of perception; exerting more extensive influence than any other principle in the History of Philosophy. Under its sway the problem of perception became this—how do Mind and Matter *seem* to meet? *Meet* they cannot, being unlike: is then Mind an illusion, or Matter an illusion; or is there a certain *medium* partaking of both, through which they come together? The maxim repudiated, and replaced by the simple assertion of consciousness, this immense fabric of speculation fell prone and helpless: and Hamilton's will ever be recognized as the hand that dealt the irrecoverable blow. Vindicating it, in name of Consciousness, as an undeniable fact, that the Ego and Non-Ego, as two distinct objects, are at the same moment, and with equal verity, present to the mind, he protested against all Unitarian Schemes, as insurrections, defying a primal Law; and it is not too much to say that the energy and directness of his protest, upheld by his searching dissection of all untrue or partially true opposing systems, ancient and modern, marks the beginning of a sounder period in Mental Science.—2. It is needless to recall to a British, or indeed to any reader, the amount of attention given by our distinguished countryman to the subject of LOGIC, or the fame that has hence accrued to him. The grounds of Knowledge ascertained, and the veracity of Perception vindicated, next in order stands the Inquiry, what are the primary laws of thinking, or according to what forms does the mind operate on the matter of its thoughts? A large, although purely notional Science; its foundation laid by Aristotle, and its domain surveyed; portions of it minutely explored by Lord Bacon; but in imminence of being all lost sight of, as a Science, in this country, or absorbed by its lowest and empirical part. Thoroughly has Hamilton revived the Stagyrite, and interpreted him to our compeers. Acknowledging to the full the merits of Lord Bacon, he has passed beyond him to the higher position of the Greek; and presented logic again, as it appeared to that penetrating and all-grasping intellect. Few will miss remarking that the fulness of his sympathy with Aristotle has its root in a corresponding universality of character: no form or mode of speculation is *foreign* to Hamilton, as none were so to his predecessor. Of special contributions to the doctrine of the syllogism we can say nothing here.—3. Logic we have termed a *notional* science, as it exclusively is. But it is conversant with laws obeyed by the Mind in thinking, and with primary notions that control, and are involved in these. What are these primary notions? Our notion of Causality, for instance, is it a mere notion, or does it belong to *Existence* also? *Space* and *Time* are forms, apart from which we can perceive nothing,—are they likewise external realities, or is-ings from external realities? Questions these peopling the vast and difficult heights of *Metaphysics*; occupying intensely the greatest Inquirers of former times, and all Teutonic thinkers in our own; but, until Hamilton spoke, wholly neglected in this country, where we rested content amid the low levels of elementary Psychology. No more

startling proof could be given of our inertness to metaphysical research properly so called, than the criticisms on Kant, &c., one finds in M Stewart's dissertations—dissertations, notwithstanding that Hamilton has written, still presenting as an adequate account of Philosophy! With corresponding knowledge and power, our distinguished Thinker has passed into this field: and his speculations concerning the 'Law of the Conditioned'—concerning the principle of Causality—his adventures into the still more rugged sphere of Ontology, establish before every one who can think or judge—whatever the fate of his special conclusions—that an Inquirer is amongst us, who need bow his head before no Greek or Teuton of them all.—May health empower him to carry on his announced and cherished designs! Even indeed, are not in the hands of man; but the 'Edition of Reid,' and the 'Discussions of Philosophy,' are possessions; and with gratitude the long Future will receive them.—What, then, is the probable issue of a life and labours like these? Shall Hamilton succeed in reviving a taste for Metaphysics? Is it likely that many who profess to admire him will imitate his independence? Shall he be the founder of a new and purified, profound and fearless Scottish School? If such a result were possible, Hamilton's achievement and example would secure it: but for two reasons its advent seems, to the writer of this notice, more than doubtful. First, There are abroad many indications, that when a new School in Philosophy shall be formed, its Methods must take greater account than has yet been done, of the issues of physiological research, and of the position of Humanity in the great Hierarchy of Organization. It is most true, as laid down by Des Cartes, that the reality of mental phenomena needs no attestation beyond consciousness; but although physiology must not absorb psychology, the two ought not, ultimately will not stand apart: the methods and science of the latter will assuredly be found to repose upon the former. But another cause adverse to the immediate reconstruction of any worthy and upright Mental Science, has sprung out of circumstances whose unravelling is probably still more remote. Changes in the social and political relations of the different classes in this country—however fertile otherwise of good fruit—have recently elevated into preponderance and power, those unsystematic views on mind and speculative subjects, which alone can be expected among busy multitudes; a condition not favourable, now nor at any period, to the existence of an independent philosophic class. In a country like ours, so practical, and where men are so fond of political station, the tendency natural to such an epoch will unquestionably be, rather to desire and furnish support—logical merely in *form*—to systems in vogue and popular, than daringly, and with single eye, to follow out Truth. For a season therefore, Philosophy may descend into subservience. It remains to be ascertained by what instrumentality, in the course of Providence, sufficient esteem and freedom shall become assured to the Truth-Seeker; the Multitudes discerning, that in Truth alone, the prize of sternest quest, and not in heaps of Opinion, *rudis inuigestaque mole*—abide Safety and Honour.

HAMILTON, SIR WILLIAM, the friend of Nelson, known as a diplomatist and connoisseur in the arts, and in natural history, 1780-1803. His second wife, **EMMA, LADY HAMILTON**, married to him, after a long course of licentiousness, in 1791, was a woman of extraordinary beauty, and still more remarkable for her powers of fascination. She became the mistress of Nelson, and his political agent at the court of Naples, and died at Calais the most abject distress 1816.

HAMPDEN, JOHN, was born at London in 1594. There is little to be commemorated of his life save what belongs to the history of the period, and all his connection with it is on the surface, for his acts were open and public, and whatever his adjutors may have been, he was ever free of secret machinations to serve private ends. He belonged, like nearly all the leaders of the parliamentary party, to one of the worshipful and ancient country families. His was widely ramified among the English gentry, and he counted Cromwell, and other opponents of the court, among his connections. In 1619 becoming married to Elizabeth Weston, to whom he was tenderly attached, he led the life of a country squire, amid a numerous family. He represented Grampound, and afterwards Wendover, in the earlier parliaments of Charles I.'s reign, but he took little concern in public business until the long parliament, when he gradually prepared himself to suffer or to die, as occasion might require, in support of what he deemed the fundamental principles of the constitution. He was imprisoned in the gatehouse for refusing to participate in one of the ex-

resistance to the prerogative was necessary. He threw himself with entire devotion into the business of the Long Parliament, and much of the successful dexterity with which it was conducted was due to his skill and courage. He commanded a troop in the parliamentary army. He was mortally wounded in an affair with Prince Rupert on 18th June, 1643, and thus left the struggle while yet it seemed on the side of the parliament one of fair defence and self-protection, and before long-sustained animosity or projects of aggrandizement had mixed themselves with the views and conduct of the parliamentary leaders. HANDEL, GEORGE FREDERICK, the son of an eminent surgeon and physician, was born at Halle in Saxony, on the 24th of February, 1684. His father had designed that he should follow the profession of the civil law, but his love for, and early progress in music, soon proved, as in many other instances, that the parental plans had to be given up. He was then placed under the tuition of Frederick Zachau, organist of the cathedral of Halle, where he made such rapid progress, that at nine years old he was able to officiate on the organ for his master, and had begun the study of composition. When only nineteen he went to Hamburg, where he became director of the operas, and such was his ability and talent, that it excited the jealousy of a rival musician, John Mattheson. These professors had been on terms of the closest intimacy and friendship for nearly six years, when a quarrel arose upon a point of professional etiquette which ended in a duel. They fought with swords, but luckily the point of Mattheson's sword broke against a metal button on Handel's coat, which put an end to the combat. This encounter took place on the 5th of December, 1704. Mattheson and Handel soon again became good friends, for we are informed by Mattheson, that on the 30th of the same month he accompanied the young composer Handel to the rehearsal of his first opera 'Almeria,' and at the theatre performed the principal character in it. Next year Handel brought out his 'Florinda,' and in the year following 'Nerone,' both of which were favourably received. In 1708, he composed his 'Dafne,' up to which time he had written harpsichord pieces, songs, and cantatas innumerable. Having become possessed of some wealth, he went to Italy, and he composed in Florence the opera 'Rodrigo.' From Florence he went to Venice, where in 1709 he produced his 'Agrippina' which was received with acclamation, and in which horns and other wind instruments were first used to accompany the voice in Italy. Here Handel met with Dominico, Scarlatti, Gasparini, Lotti, and other great masters of musical art. He next went to Rome, where he met Alessandro Scarlatti, and had an opportunity of hearing music of the highest class. Here he composed 'Il Trionfo del Tempo' and gained the friendship of Cardinals Ottobeni and Pamfili, the latter of

ed loans, but this effort at coercion was abandoned. His resistance to the imposition of a tax without authority of parliament, under the obnoxious name of ship-money, came to its conclusion in 1637, when the question was solemnly decided in the Exchequer Chamber. The decision was against him, and satisfied him that armed

whom wrote the libretto, for a sacred work named 'La Resurrezione.' After visiting Naples he returned to Germany in 1712, where he received the situation of Maestro di Capella to the elector of Hanover, afterwards George I. of England. Having obtained permission, he came to England in the latter end of the year 1711, between which year and 1720, he composed his oratorios 'King David,' 'his Te Deum,' and 'Jubilate,' the 'Water Music,' his oratorios 'Amadis,' 'Festo,' and 'Il Pastor Fido,' his 'Acis and Galatea,' 'Escher,' and other minor works. While he was in England, Queen Anne awarded him a pension of £200 per annum, and when the elector became king of England this allowance was doubled. Not many years after this, Handel having been appointed to teach the princess royal, an additional pension of £200 was added to the former grants by Queen Caroline. The busiest, but not the most fortunate period of Handel's life had now arrived, and that which forms the most splendid era in the musical annals of Britain. It was resolved that the king's theatre should be converted into an academy of music, and Handel was engaged as manager. During his management he produced fifteen new operas, but his troubles were so great that in 1726 he retired from his managerial duties with a loss of £10,000, and a constitution much damaged by incessant labour and turmoil. He then made an attempt to give operas at Covent Garden Theatre, but was equally unsuccessful. He next commenced giving oratorios, which he continued to nearly the last day of his life, and deriving considerable pecuniary advantage from them. It is an historical fact that the 'Messiah' was, during a long period, annually performed at the Foundling Hospital, and above added £10,300 to the funds of that institution. Late in life, Handel lost his eyesight, but this affliction could not burthen or obscure his fine intellect, for he continued to play concertos and voluntaries between the parts of his oratorios, in the same masterly style which had distinguished his touch in the prime of his life. He died on the 13th of April, 1759, and was buried in Westminster Abbey, where a monument by Boubillat is erected to his memory. In 1784, a grand musical festival, the Commemoration of Handel (being the centenary of his birth) was held in Westminster Abbey, when nearly £13,000 was received for five days' performances.—In the Queen's Library are the original MSS. of nearly all Handel's works, filling 82 large folio volumes. These include 92 Italian operas, 23 oratorios, 8 volumes of anthems, 4 of canzonets, 3 of Te Deums and a Jubilate, together with concertos, sonatas, &c. Not in the royal collection are, 11 volumes consisting of operas, harpsichord lessons, fugues, organ concertos, water-music, &c. Of the oratorios, 'Escher' was first performed in 1732; 'Deborah and Achaiin' in 1733; 'Acis and Galatea' in 1735; 'Oda, St. Cecilia's Day' in 1736; 'Israel in Egypt' in 1738; 'L'Allegro ed il Penseroso,' 1739; 'Saul,' 1740; 'Messiah,' 1741; 'Samson,' 1742; 'Semele,' 'Babshazzar,' and 'Susanna' 1743; 'Heracles,' 1744; 'Choice of Hercules,' and 'Occasional Oratorio' in 1745; 'Joseph' and 'Judas Maccabaeus' in 1746; 'Alexander Balus and Joshua' in 1747; 'Solomon' in 1749; 'Theodora' in 1750; 'Jephthah,' and 'Time and Truth' in 1751.—Handel was great

in every style of music. In sacred music, especially of the choral kind, he not only shows an immeasurable distance all who preceded him, but reached that sublimity to which the art is so capable of attaining. In music Handel was impetuous yet dignified and fervent. In person he was large and bulky, with pleasing and regular features.

HANNIBAL, one of the most illustrious persons of antiquity, was born B.C. 247, the same year in which his father Hamilcar was appointed to command of the Carthaginian army in Spain. At the age of nine he accompanied his father to a scene of war, having before leaving Carthage taken a solemn oath at the altar in presence of his father, pledging himself to eternal hostility to Rome—a pledge to the fulfilment of which his whole future life was devoted. He was present at the battle in which his father perished, B.C. 221, and though only eighteen years old, his bravery and genius for war were already so conspicuous, that Hasdrubal, his father's successor, turned to him the chief command of nearly all the military enterprises which he planned. On the assassination of Hasdrubal, B.C. 221, the senate unanimously proclaimed him commander-in-chief, a choice which was speedily ratified by the government at Carthage. Being now invested with the entire conduct of the war, he quickly reduced to subjection the Spanish tribes which had not been conquered by Hasdrubal. In the spring of 219, he laid siege to Saguntum, a city in alliance with the Romans, though warned that an attack upon it would be held as a declaration of war, and kept after a blockade of eight months, thus setting defiance the mighty power of Rome. Such was the commencement of the second Punic war. After passing the winter in making the necessary preparations for the invasion of Italy, he crossed the Ebro in the following spring, passed the Pyrenees with an army of 30,000 foot and 5,000 horse, and, marching through Gaul, reached the Rhone without interruption. Crossing the Rhone he ascended the left bank of that river till he obtained with the Isere, then struck off to the north, and surmounting the many and most formidable difficulties which obstructed his passage, reached the summit of the Alps, on the north side of leaving the plains of Dauphine. When he reached the plains of northern Italy, his army was reduced to 20,000 infantry and 6,000 cavalry, so that his march must have cost him 33,000 men. After recruiting the strength of his troops, he entered a career of unexampled success. He crossed the defunct the consul P. Scipio on the banks of the Ticinus, B.C. 218, and the Somme as at Trebia, B.C. 218, thus making himself master of the whole of northern Italy, and, proceeding southward, gained a signal victory over the consul Flaminius at the Trasimene lake, B.C. 217. The Romans now collected a fresh army, which was placed under the command of Fabius Maximus as dictator; and a defensive system of war

re-adopted till the end of the year. In the spring of 216, the Romans raised an army of nearly 80,000 men, which, led by the consuls L. Aemilius Paullus and C. Terentius Varro, advanced to Cannæ, in Apulia, where the Carthaginian army was engaged. In the battle which ensued, the Roman army was annihilated, and the consul Aemilius Paullus slain. The whole of lower Italy was thereby placed in the power of Hannibal, and the fidelity of one of the Roman allies, who had hitherto contented himself, began to give way. But the dauntless spirit of the Romans remained unshaken, although Hannibal was not the only enemy with whom they had to contend. They now adopted the defensive system, counteracted the enemy's movements in every direction, and rendered it impossible for him to prosecute extensively a system of active aggression. Hannibal, notwithstanding, maintained his army in Italy for the next twelve years, having, in B.C. 207, sustained an irreparable loss by the destruction of the army and his brother Hasdrubal, who was marching to his assistance. In B.C. 204, P. Cornelius Scipio, ahead completed the conquest of Spain, passed over to Africa, and, with the assistance of Masinissa a Numidian prince, gained two victories over the Carthaginians. The war being thus carried into the enemy's country, Hannibal was recalled to Italy, and, landing at Leptis, advanced to Zama, a city five days' journey west from Carthage. Here he was entirely defeated by Scipio, B.C. 202, and the Carthaginians were obliged to sue for peace. Here ended the second Punic war, B.C. 201. After the conclusion of the war, Hannibal applied himself to the correction of the abuses which existed in the Carthaginian government; but was interrupted in his course by an embassy sent from Rome to demand his punishment as a disturber of public peace. Making his escape from Carthage, he fled to the court of Antiochus at Ephesus, assisted in fixing his determination to make war against the Romans. When peace was concluded between Antiochus and the Romans, Hannibal took refuge with Prusias, king of Bithynia, with whom he remained about five years. But the Romans could not rest so long as their once formidable enemy was alive, and Prusias agreed to turn him into their hands. Hannibal, finding his escape was now impossible, destroyed himself by poison at Nicomedia, in Bithynia, B.C. 183, in the fifty-fifth year of his age. [G.F.]

HAROUN-AL-RASCHID, in English 'Aaron the Just,' a renowned caliph of Bagdad, contemporary with Charlemagne and the empress Irene, was born in Media 765, and succeeded his elder brother as fifth caliph of the Abasside dynasty in 786. He had already acquired immense popularity by his victories over the Greeks, and had made Irene a tributary of the caliphate. He now raised the empire of the Arabs to its highest pitch of grandeur, uniting the talents of a philosopher to those of a conqueror, and, like Charlemagne in the West, making his court the centre of arts and letters, and the refuge of men of learning from all parts of the Eastern empire. The Arabs never tire of their eulogisms upon the magnificence, generosity, and wisdom of this prince, as all the world has read in the 'Arabian Nights' Entertainments.' His reign was the Augustan era of the Arabian dominion, and his imaginative subjects have celebrated it as the age of enchantment and miracle. After the death of Irene, Haroun-Al-Raschid humbled her successor, the Emperor Nicephorus, still more deeply, made immense conquests among the Turks and other tribes of Asia, and subjugated the sect of Ali in his hereditary dominions. He died in 809, leaving his vast possessions divided under his three sons, which prepared the way for endless jealousies, and produced many civil commotions in after years. Haroun not only promoted learning and the arts in his dominions, but he was himself a poet, and was easily moved to tears by the recital of poetry. Yet he was often cruel, because, like a true child of the East, he was impulsive, and severe because politic. [E.R.]

HARTLEY, DAVID, an English metaphysician of some note; born 1705 at Armley in Yorkshire; died in Bath 1757. Hartley's well-known, rather, much-heard-of, work, entitled 'Observations on Man, his Frame, his Duty, and his Expectations,' occupies 3 volumes 8vo. It consists of three distinct parts. Adopting the sensational theory of the origin of human knowledge to its fullest extent—resolving Mr. Locke's 'Reflection' into a modification of sensation—he endeavours first to explain all sensations and ideas by material agency, viz., hypothetical vibration of a hypothetical fluid, connected with the nervous system. It is not improbable that Hartley esteemed this theory of vibrations, his most important speculation: happily for the permanence of his repute he contributed to Psychology something much more valuable than one of those countervailing fancies, bubbling up in every age, but which attain no place in the History of Science. It is probably indisputable that since Aristotle's time the Law of Association, and its sway over the succession of mental phenomena, had not been so thoroughly studied or fully exposed as in the second division of Hartley's treatise. Hobbes and Locke had done little more than assert this great Law; but Hartley unfolded it with a clearness which left little to be desired. The last portion of the 'Observations' is occupied with discourse on human duty and virtue, on our relation to God, and hopes of a future life. Carried out logically, the materialistic views of the writer, on the fundamental problem as to the origin of Ideas, can never fail to issue in a scheme of simple negations of all these momentous theories: fortunately, however, Hartley's 'instincts' prevailed over his logic, and he has bequeathed much that is excellent and true. It

cannot be denied however, that his book as a whole is rather a set of dissertations, than a compact treatise: its scientific value being confined to its illustration of the Law already referred to.—Hartley's life and character were beyond reproach. He was cheerful, placid, and actively benevolent. The heart is often a trusty safeguard of the Head, amid the perils of Speculation. [J.P.N.]

HARVEY, WILLIAM, M.D., the discoverer of the circulation of the blood, was born at Folkstone, Kent, A.D. 1578, and died in London, A.D. 1657, aged seventy-nine years.—This remarkable man, whose name is indissolubly associated with one of the most important discoveries ever made in physiological science, was educated first at the grammar school of Canterbury, and subsequently at Caius College, Cambridge, where he spent five years. He afterwards travelled through Germany and France, and proceeding thence to Italy, he fixed himself at Padua, the medical school of which city had at that time a high reputation, and there he became the pupil of Fabricius ab Aquapendente, the most distinguished anatomist of his age, from whom he acquired a knowledge of the valvular structure of the veins, which laid the foundation of his future fame. In 1602 he returned to England and began to practise as a physician in London; and in 1615 he was appointed professor of anatomy and surgery to the Royal College of Physicians. There can be no doubt that his particular opinions on the mechanism of the circulation were formed long before, but they were first publicly announced from the chair of the college to which he was now attached in the year 1616. We cannot enter into anatomical and physiological details in this place, and it must suffice to say, that Harvey for the first time demonstrated the double function of the heart in sending out blood from the left side, through the arteries, over the whole body, and in receiving it back by the veins to the right side, whence it is propelled into the lungs, where it loses its impurities, and is again rendered fit for use. This elementary truth, which is so familiar to us, was new in those days, and as it was opposed to the prevailing ideas upon the subject, it was regarded by

his contemporaries as an audacious novelty; and for upwards of twenty years the propounder of this doctrine was assailed by every species of detraction and calumny. He had the good fortune, however, to survive these attacks, and to see his views universally adopted before his death; nor would it be easy to find a better instance of the application of the principles of the inductive philosophy to the investigation of natural phenomena than that supplied by the use which Harvey made of his knowledge of the internal structure of the veins, which, even in the hands of his master Fabricius, had been wholly unproductive. The veins have a feeble and imperceptible contractile power, if they have any at all, and Harvey at once saw that the valves were placed in these vessels to prevent the reflux of the blood in its progress back to the heart, and out of this conclusion mainly arose the discovery of the true theory of the circulation, with all its important consequences. Of this there can be no doubt, for there still exists in the museum of the College of Physicians six tabular views, as large as life, showing this peculiar structure of the veins, which were executed by him or to his order, and which were presented to that learned body by his collateral descendant, the earl of Winchelsea.—His right to the merit of this great discovery is incontestible, yet there have been those in modern times who have disputed it, and who have asserted that he was anticipated in his conclusions by several of the anatomists of the ancient world, and by some of his more immediate predecessors. The passages collected from the writings of antiquity by the diligence of such authors as Dutens go for nothing in an inquiry into the existence of a great physical fact, and touch Harvey's claims to the smallest possible extent; but one name deserves to be mentioned in connection with this subject, to wit, that of the celebrated and unfortunate Michael Servetus, the Spanish physician, whom Calvin and his consistory burned for heresy at Geneva. In the year 1553, a quarter of a century before Harvey was born, Servetus published a theological treatise, in which some singular passages occur on the functions of the heart and lungs, which, though vague, would seem to indicate that he had an obscure idea of the pulmonic circulation and its uses; but such loose speculations as Servetus indulged in cannot for a moment be compared to the severe methods and rigid deductions of Harvey, who took nothing for granted that could be experimentally proved. One of his rules was, that 'Nature herself is the most faithful interpreter of her own secrets' (De Generatione Animalium). He consulted her oracles and discovered the truth.—Harvey was physician successively to James I. and to his son, Charles I. In the train of the latter he visited Scotland in 1633, and he has left an account of an excursion which he made on that occasion to the Bass Rock, in the Frith of Forth; and having adhered to the fortunes of his patron, he was present, though not as a combatant, but as the guardian of the two young princes, Charles and James, at the battle of Edgehill, in 1642. During the fight he employed himself by reading a book under a hedge, but a large cannon ball grazing the ground close to him while he was so occupied, he removed with his charge to a distance from the scene of action. In 1651 his

residence at Whitehall was plundered, and his manuscripts destroyed, a loss which he ever after deplored, as they contained the results of the experiments of a life. His works are not numerous, but they are valuable; and his treatise on the Generation of Animals is still a standard book. He died worth £20,000, which he bequeathed to his brother, Mr. Eliab Harvey, with the exception of a yearly sum of £56 for the annual delivery of an oration at the College of Physicians, which is still known as the Harveian oration. He was diminutive in stature, with a small, round, but expressive black eye. His temper was naturally choleric, and was rendered perhaps more so by severe attacks of the gout; and in his philosophical sentiments he is believed to have inclined to the opinions of his friend Hobbes, to whom he left a legacy of £10. There is a tradition that he destroyed himself by an over-dose of opium, to avoid the pain of a fit of his habitual malady; but this story is now discredited, as it has been ascertained that he died of a slight shock of paralysis, which his aged and feeble frame could not withstand. HASTINGS, WARREN, was born in 1733. He was the son of obscure parents, but he claimed an ancient and renowned descent, and from his early childhood it was his ambition to win back the domains of his ancestors. He was educated at Westminster School, and in 1750 was appointed a writer in the service of the East India Company. In the emergency through which the ability and valour of Clive saved the British possessions, his capacity was seen while the obscure clerk carried a musket as a volunteer, and he was chosen diplomatic agent at the Durbar. After having remained fourteen years in India he returned to Britain, still comparatively obscure; but his talents

were remembered, and after being named second in council in Madras, he was, in 1774, appointed to the newly-created dignity of governor-general of Bengal. The bold measures which he took to defend the British interests from Hyder Ally is one of the great epochs in the history of the British Eastern Empire. By its audacious and somewhat unscrupulous character, his career startled and alarmed British statesmen on the morality of the policy which guided the British system in the Eastern Peninsula, and he was recalled to meet the celebrated impeachment moved by Burke on 4th April, 1786. The trial was begun on 18th February, 1788, when, according to Mr. Macaulay, 'The high court of Parliament was to sit according to forms handed down from the days of the Plantagenets, on an Englishman accused of exercising tyranny over the lord of the holy city of Benares, and the ladies of the princely house of Oude.' Political events turned public attention into other channels during the impeachment, and when it had been almost forgotten it ended in an acquittal in April, 1795. He spent his old age in retirement; the injury which his fortunes received by the expense of his defence being but partially remedied by the gratitude of the East Indian Company. He had a taste for letters, and wrote some secondary works now forgotten. He died on 22d August, 1818. [J.H.B.]

HAUY, RENE JUST, a celebrated mineralogist, was born at Saint Just in 1743. He died in 1822.

—Sprung from poor parents, who were not able to give him an education, his excellent behaviour while a child, attracted the notice of some benevolent individuals in his native town, who induced his mother to take him to Paris. After some little time his kind friends obtained him a bursary at the College of Navarre. When he had completed his

education there he became a teacher in the establishment, and continued in that humble capacity for several years. Affection for a friend induced him to study botany; and accident led him to the lecture-room of M. Daubenton, at that time professor of mineralogy. He was charmed with the lecture, and found the study of minerals more suited to his taste than that of plants. He was now thirty-eight years of age. For some time his mind had been occupied with ideas relative to the contrast between the forms of the vegetable and mineral kingdoms, when one day examining a fine specimen of calcareous spar crystallized in prisms, he accidentally let it fall. Upon examining one of the broken prisms, he found that the fracture showed as smooth a face as the original, but that the form of the crystal was changed into that of a rhomb. He repeated the experiment upon many other minerals, and always found the same result; the component parts of each mineral were found to have the same geometrical figure, and a nucleus always similar to itself; while the variety of external forms which the masses assume arose from the manner in which the smaller crystals composing it are arranged. Continuing his researches and experiments, he soon succeeded in establishing the true law of crystallization. This he has explained at full length in his 'Traité de Mineralogie,' a work which has procured for him an immense reputation. In 1792 M. Haüy was imprisoned along with many other ecclesiastics. By the assistance of his pupil Geoffroy St. Hilaire, he was, however, soon after released, and remained for the future untouched and unmolested. In 1802 he was elected professor of mineralogy at the Garden of Plants. Napoleon treated him with much respect; made him a canon of Notre Dame, and an officer of the Legion of Honour; but at the restoration he was treated with cruel neglect by the government, and died in comparative poverty. HAY, WILLIAM, an English essayist, d. 1755.

HAYDN, FRANCIS JOSEPH, was born at Rohrau, a small town about fifteen leagues from Vienna, in March, 1732, of very humble parents, his father being a wheelwright and parish sexton, and his mother, before her marriage, having been cook at the chateau of a neighbouring nobleman. Haydn seems to have inherited a taste for music from his father, who had a fine tenor voice, and had made some progress as a performer upon the organ, and could accompany himself and his wife upon the harp. While yet quite a child he showed an early predilection for music, and a cousin of his father who was schoolmaster at Heimburch, taught him to perform upon the violin and sing with taste. This relation also taught him Latin, which qualified him to sing in the choir of St. Stephen's at Vienna, and where he soon attracted the attention of Renter the chapel master. Haydn pursued his musical studies with great earnestness, and under circumstances of great privation. Such was his industry, however, that while he was under Renter, no single day passed without his having devoted sixteen and sometimes eighteen hours to his music lessons. Having commenced to study composition, he at thirteen years old, began to write a mass. He gained his livelihood from singing till the age of seventeen, when his soprano voice left him. After this period, being unable to pay for lessons in counterpoint and harmony, he procured an old work on the art, and in spite of the pedantic rules of the old book he had to study from, he soon became well informed in the science of music. About this time he became acquainted with Porpora and Metastasio, with whom he spent some of his time very agreeably, but nothing of importance occurred in his life up till the year 1771, with the exception of an unhappy marriage, which he contracted with Anne Kellar, a prudish damsel, who, in addition to a tiresome parade of virtue, had, as his biographer informs us, a 'mania for priests and monks.' In the year named above, he was appointed chapel master to Prince Esterhazy, which appointment put an end for ever to his pecuniary embarrassments. In the service of this prince in the palace at Eisenstadt, Haydn produced many of his great works, and under advantages which few composers ever possessed—he had a full and excellent band, living under the same roof with him, at his command every hour of the day. Thus passed the life of Haydn till the year 1791, when he arrived in England to fulfil an engagement with M. Salomons, who was then giving concerts in the Hanover Square Rooms. During this engagement he produced six of his 'Twelve Grand Symphonies,' and also published many canzonets, quartetts, sonatas, &c. In 1794, he again visited London under an engagement to

Gallini, then manager of the King's theatre, Haymarket, and at which period he produced the remaining six of his 'Grand Symphonies.' While in London, the greatness of his genius, and the amiability of his manners, brought him many friends, and rendered his success quite triumphant. At the close of this engagement Haydn returned to Vienna, and never afterwards left it. In 1795, Haydn commenced the composition of his 'Creation,' and was two whole years employed upon it. On one occasion, when asked why the Oratorio was not finished, Haydn answered with the utmost tranquillity 'I am long about it, because I wish it to last long.' This wish was a prophecy, his 'Creation' will last for ever. The 'Creation' was brought out in 1798, and two years afterwards he gave to the world his 'Seasons.' The last great work upon which his genius exerted himself, was two sets of quartets. In his latter years he employed himself in setting accompaniments to some Scotch airs for the late Mr. George Thomson of Edinburgh. In 1805, he, by the advice of his physician, gave up all study, and from this time he never left his villa at Gumpendorff. The closing scene of this great composer's life was not less remarkable than his career was illustrious. The last time he appeared in public was at the performance of the 'Creation,' which was honoured by the presence of more than 1,500 people, amongst whom were many of the nobles and princes of Austria. 'Surrounded by the nobility of Vienna and his friends, by artists, by lovely women, whose eyes were fixed upon him, listening to the praises of God, which he himself had imagined, Haydn bid a glorious adieu to the world.' Soon after this, war broke out between France and Austria; this intelligence vexed him and exhausted the last remains of his strength. 'The French armies advanced rapidly, and on the 10th of May, 1809, having reached Schonbrunn about half a league distant from Haydn's villa, they fired next morning hundreds of cannon shot upon Vienna, that city so much beloved by him. Four bombs having fallen close to his house, his two servants, with terror depicted in their countenances, ran to him; the old man, by an effort, rose from his arm-chair, and with a dignified air, cried, 'Why such alarm! know that, where Haydn is, no evil can happen.' But this exertion was beyond his strength; a convulsive shivering prevented him adding more, and he was immediately conveyed to bed. On the 26th of May, he was almost completely exhausted; notwithstanding, he had his piano moved towards him, and sung three times with a voice as loud as he could, 'God save the Emperor.' These were his last words. At his piano he became insensible, and he expired on the morning of the 31st. Haydn was very religious. The commencement of all his scores are inscribed with one of the following mottoes '*In Nomine Domini*,' or '*Soli Deo Gloria*,' and at the end of them all '*Laus Deo*.' His works are exceedingly numerous in all classes. Among them are 116 symphonies, 83 violin quartets, 60 pianoforte sonatas, 15 masses, 4 oratorios, a grand 'Te Deum,' a 'Stabat Mater,' 14 Italian and German operas, 42 duets and canzonets, and 200 divertimentos for particular instruments. [J.M.]

HAYDON, BENJAMIN ROBERT, was born at

Plymouth, 23d January, 1786; his father was a bookseller, and he was educated in early youth at Plympton Grammar School, where Sir Joshua Reynolds had been brought up. Haydon determined upon becoming a painter, contrary to the wishes of his parents. His father, however, assisted him for several years in the metropolis: he visited London in 1804, and became a pupil of the Royal Academy in 1805. He had the advantage of the acquaintance of Northcote, Opie, and Fuseli, as advisers, and of Jackson and Wilkie as fellow-pupils. His ambitious views of art were early developed: in 1807 he exhibited a picture of the 'Flight into Egypt,' purchased by Mr. Hope, which procured him a commission from Lord Mulgrave for 'Dentatus,' a picture which, from the dissatisfaction he felt at its being placed in the ante-room in the Royal Academy Exhibition of 1809, appears to have been the first cause of most of his subsequent trouble, for not imagining that others might not think so highly of the picture as he did himself, he made the supposed injustice a cause of quarrel with the Academy, and the notion of injustice, or rather owing to his inordinate vanity, a conspiracy to suppress him, developed itself into a monomania, and possessed his mind the whole of his life. Dentatus has been admirably engraved in wood by his pupil Harvey. — The encouragement, however, which Haydon got from Lord Mulgrave, both social and professional, gave a great impulse to his exertions, and Dentatus was succeeded by a considerable series of great works. He now, to make up some deficiencies of execution, devoted himself for half a year to the practice of portrait painting at Plymouth, and after his return to London he became an enthusiastic student of the Elgin Marbles, then recently brought from Greece; the excellence of which he professes to have been the first to point out to the British public, rather naively overlooking the claims of Lord Elgin himself, who had spent £52,000 in securing them and bringing them to England. — The following are Haydon's principal works in the order of their production: — In 1812 'Macbeth,' for Sir George Beaumont; in 1814 the 'Judgment of Solomon,' for which he was voted the freedom of his native town, and in this year he visited Paris; in 1820 'Christ's Entry into Jerusalem,' (now in America,) which produced him nearly £3,000 by its exhibition alone, in London, Edinburgh, and Glasgow; in 1821 'Christ's Agony in the Garden,' (in this year he was married); in 1823 'The Raising of Lazarus,' (now at the Pantheon,) in this year he was arrested for debt, and passed through the Insolvent Court; in 1826 'Pharaoh Dismissing the Israelites,' and 'Venus and Anchises; in 1827 'Alexander and Bucephalus,' for Lord Egremont, and 'Eucles; in 1828 'The Mock Election in the King's Bench,' purchased by George IV.; in 1830 'Napoleon at St. Helena,' for Sir Robert Peel, a picture he afterwards repeated in small nearly thirty times; in 1832 'Xenophon's First Sight of the Sea,' in the retreat with the 10,000; in 1834 'The Reform Banquet,' for Lord Grey, 'Cassandra,' and 'Waiting for the Times; in 1835 'Achilles at the Court of Lycomedes Discovering his Sex; in 1836 'Samson and Delilah,' (this year he passed a second time through the Insolvent Court; in 1838 'Christ Blessing Little Children,' for Liverpool; in 1839

'the Duke at Waterloo,' also for Liverpool; in 1810 he lectured (gratis) at the Ashmolean Museum, Oxford, and henceforth his time was divided between lecturing and painting; he found the former more profitable pursuit, his lectures are published: in 1841 'The Anti-Slavery Convention,' in 1842 'The Maid of Saragossa,' in 1842 'Curtius leaping into the Gulf,' in 1843 the cartoon of the entry of the Black Prince into London, with King John of France prisoner; this was in competition for Westminster Hall, in which Haydon failed, a failure which some of his friends supposed have been fatal to him; in 1844 'Alexander taming the Lion,' and a large repetition of 'Napoleon at St. Helena,' which was purchased by the King of Hanover; in 1845 'Uriel and Satan,' and finally, in 1846 the 'Banishment of Aristides,' and 'Hero Watching the Burning of Rome,' representing the evils both of democracy and of despotism: these last were two of a series of six which he had signed years ago, for the illustration of the old House of Lords.—These pictures Haydon exhibited usually, but he was unusually unsuccessful with them. He had often lost by his exhibitions, but sometimes had gained large sums, as in the case of 'Christ's Entry into Jerusalem,' in this last exhibition he lost £111 11s. 5d., and this loss at a time when he was penniless, added to his deep disappointment at not being employed in the decoration of the Houses, at last overcame his all but indomitable energy, and he destroyed himself on the 22d of June of this year, 1846. One of the latest entries in his diary is:—'Tom Thumb had 2,000 people last week, B. R. Haydon, 133½ (the little girl). Exquisite taste of the English people.'—It may be supposed by some that Haydon was a martyr to his love of what is termed *High Art*: the facts of his life show anything but this. He began his career with almost unexampled encouragement, and appears even at all times to have found friends, who gave and lent him considerable sums of money, from £50 to £1,000, and his professional receipts were by no means small; from the years 1831 to 1836 inclusive, he received from this source alone £4,617 2s. 3d., an average of £750 per annum; yet he was always in difficulties sufficient to have harassed most men to death in as many months as Haydon endured them: his debts amounted to about £3,000 at his death. The cause of common justice renders these details imperative, both from the extraordinary circumstances of Haydon's death, and his habitual accusations against the Academy for its jealous tyranny, and the people for their hopeless want of taste. Haydon had no other enemy than himself; he appears to have been wholly wanting in common sense; his ambition was so excessive that it destroyed his judgment, and his extraordinary energy wanted that counterbalancing ability to insure a real artistic success: he was impulsive and desultory, mistook the will for the deed, and neglected the commonest elements of excellence in execution; he was extremely mannered; with the exception of a large style of design (indicated, not executed), and a warm and powerful colouring, we miss every other requisite of a fine picture: yet such was his extraordinary vanity, that he identified the fate of the art of his country with that of his own efforts, and assumed all pro-

gress to have proceeded from himself, while perhaps no individual artist ever had less influence on the taste of his time, or even that of his own pupils, who do not retain a single trace of his style; indeed, Sir Charles Eastlake, Sir Edwin Landseer, and Lance, the fruit painter, Haydon's principal scholars, illustrate three as opposed paths, as the whole province of painting could possibly display.—(See *Memoirs of B. R. Haydon from his Journals*. Longman, 1853.) [R.N.W.]

HEBER, or EBER, a patriarch of Syria, from whom it is supposed the Hebrews derive their name (Genesis x. 24).

HEBER, REGINALD, a learned clergyman of the Church of England, 1728-1804. His son, of the same name, the well-known bishop of Calcutta, distinguished as a poet and essayist, 1783-1826.

RICHARD, half-brother of Bishop Heber, known as a learned editor, 1773-1833.

HEBERDEN, WILLIAM, M.D., F.R.S., a learned and distinguished English physician, was born at

London in 1710. After the usual preliminary education at the Grammar School of St. Saviour, which he entered at the early age of seven, and where he remained till 1724, he was transferred to St. John's College, Cambridge. Here he graduated as B.A. in 1728, and as A.M. in 1732; and having resolved to follow medicine as a profession, he obtained his degree as M.D. in that university in 1739. He practised as a physician at Cambridge, giving lectures on *materia medica* at the same time in the university till the year 1746, when he removed to London, where he speedily attained to great eminence, and where he continued to reside ever afterwards. He died in Pall Mall on the 17th of May, 1801, in the ninety-first year of his age. Dr. Heberden was one of the best classical scholars of his time, and one of the most perfectly instructed medical men England has ever possessed. It was to a suggestion of his that the 'Medical Transactions' owe their origin, and he contributed to the first three volumes of that valuable publication many important papers; he is best known, however, by his 'Commentaries on the History and Cure of Disease,' a posthumous work, published by his son in 1802. HEBERT, a French writer, 18th century.

HEBERT, JAMES RENE, one of the Jacobin leaders of the French revolution, commonly called 'Père Duchesne,' from the name of his journal, was born at Alençon towards 1755, and executed with his accomplices Chaumette, Anacharsis Cloots, and others, on the 24th of March, 1794. He was the most brutal journalist of the period, and played a leading part in every conspiracy against the establishment of law and order, and in the detestable massacres of September, 1792. On the 10th of August preceding he had been installed among the magistrates of the people at the Hotel de Ville, and from this period he laboured to exalt the municipal authority above that of the convention. The Girondins were sacrificed in the struggle which ensued, but Robespierre and the Committee of Public Safety only awaited a proper opportunity, and arrested the party of Hébert, at the very moment they were threatening a new insurrection. The followers of Hébert and Chaumette, generally called 'Hébertists,' were atheists, and their leaders were as obscene and cruel in outward conduct as they were irreligious in heart. The charge on which they were executed was that of endeavouring to destroy the republic by immorality. [E.R.]

HEGEL, GEORGE WILLIAM FREDERICK, born at Stuttgardt 1770, died at Berlin, in the flush of fame, November 14, 1831. A philosopher whose power and renown remind one of traditions concerning a Pythagoras: he created a School, not numbering in its ranks his most distinguished contemporaries, but exciting a whole people; influence of Hegel diffused itself through the politics and religion, as well as through all the speculation of Germany. The principles on which this remarkable thinker constructed his system are twofold. *First*, his discovery, or alleged discovery, a universal law according to which Thought unfolds itself—the fundamental and sole law of *Dialectic*. Every thing or notion, says Hegel, exists to the mind, because it has, or is seen to have, a *contradiction*: in other words, there is some other thing or notion standing out right against it, and in opposition marking it off, or *defining* it. A notion and its opposite, or *contradictory*, are two elements essential to every act of thinking; and soon as these are realized, a *third* act or movement supervenes—viz., the effort to *reconcile* the two *contradictories*, or to find some third, and of course a higher notion, in which they unite or blend. Three elements, therefore,—a notion, its contradictory, and the solution of the contradiction, a *thesis*, its *anti-thesis*, and the *syn-thesis* of the two—represent a complete act of logic, or one movement of dialectic; and on the type of this movement Hegel undertook to explain the entire course of action of Thought in its efforts to comprehend the Universe. It were not easy to over-estimate the surprising skill with which a task so novel and audacious has been executed: in this respect indeed the 'Encyclopædia of Philosophical Sciences' will ever be a marvel. Thought is presented to the astonished reader, rising up from its barest expression through a gigantic scheme of ascending *triples* until, having comprehended every form and sphere of possible knowledge, it reaches the Absolute or the Infinite. The attempt has indeed failed: its failure was as necessary and has been as signal as that of Babel; nevertheless, in making it, Hegel had successes that might have achieved station in many minds instead of one: he has thrown light on the methods and relationships of several departments of knowledge, that will abide connected with his name, as a rare and beneficent contribution to philosophy. *Secondly*, Hegel's next principle, yet more distinctive, is also more unusual. Schelling before him had spoken of the *Absolute*, the necessarily existing *Unity*—blending together the whole variety of thought and things; but this Absolute he deemed an *Essence*, not irreconcilable with the notion of God. Hegel resolved that nothing unintelligible—no obscure residuum—should remain in philosophy. What, he asked, is *Reality*? What is the thing truly known, in the *Cogito* of Descartes? Is it other than *Thought*? I know myself or my existence, because I *think* myself. I do to the *external world*, as men term it, Fichte demonstrated it a mere modification of the thinking principle;—what is it too, then, save a modification of *Thought*? What need in such a case of *Essence*?

Substances? Thought is at once Knowledge and existence; the Ideal is the true and only Real. and so disappear for ever, unknown quantities or instances from philosophy; and science at last is equate! Singular as this principle, taken by itself, must look to the English reader, the consequences of its union with Hegel's first assumption, still more astounding. If the knowledge of things can be expressed or referred to one universal movement of dialectic, are not Things themselves—the reality we can reach—simply the evolution of thought, according to this movement? In other words, does not Dialectic represent, nay create by movements, all that we call the Universe? At this point Hegel starts farthest away from Schelling. Schelling's *Absolute* was primary, the great first and ultimate principle necessary to harmonize the variety of existence: according to Hegel the *absolute is evolved—created* as well as *risen to*, by thought;—God, in short, is not the *discovery*, but the *issue* of dialectic; and exists nowhere nor in any manner, apart from our human consciousness! It is needful in candour to warn the student, that he must not judge of the verisimilitude of a scheme extraordinary, by this barest outline. No remarkable system of thought, can fairly be separated in its details, inasmuch as *these* are the bridge which alone we can pass over from ordinary modes of contemplation; and it will not be conceded that the high genius of Hegel failed to provide the strong semblance of such a bridge, giving that multitudes of the keenest thinkers in many not only became passionate adherents of his doctrine, but put their sincerity to the test, accepting all its practical conclusions. It were recently out of the question to attempt here a full criticism of Hegelianism: nevertheless there are a few general remarks on the whole set of these philosophies of the Absolute, which, from our British point of view, it may not be unfitting to mention, as the conclusion of this article. (See article on HELLING.) 1. There is one meaning and application of the term *Absolute*, legitimized and accepted in this country, which must be carefully distinguished from the common significance of the same in Germany. Truths fundamental to, and inseparable from our human nature, are in our English phraseology, *absolute*, to that Nature: in other words, we must accept these as ultimate and inviolable conditions of human thought—expressive, to speak of, of the *structure* of that physical and metaphysical fabric, which is the composite being, *Man*. The transcendental philosophy of the Absolute, on the other hand, is not a philosophy aspiring to discern and rest on truths of the nature of the foregoing; it is one which aims at grasping, defining, and underriding the absolute principle of the whole universe: it is a reverential philosophy aspiring to discern the stence of a Primal Cause, a substratum and providence; but to apprehend the whole structure that prime efficiency, to *formalize* it, and deduce from it the necessity of all that has been, that is, and that shall unfold. To Man, such a philosophy is simply unattainable. On the vexed question, whether it is possible to effect the transition from metaphysics to Ontology—to infer from the existence of necessary truths, the existence of corresponding realities—one may hold by the affirmative with all tenacity, and yet repeat the assertion that

a philosophy with such aims is utterly unattainable. From the intellectual and moral constitution of Humanity it may be legitimate to conclude something concerning the attributes of the Primal Cause: but to fathom the nature of the Cause, is beyond the reach of all those faculties that belong to us. Humanity is but one force among myriads—one solitary though rich and potent *Monad*—and it cannot encircle or comprehend the Infinite. Nay, this is manifested, by the very progressiveness of our own nature. What is absolute to us, we reach by Intuition; and there is no part of humanity so *educable* as the Intuitive faculty. In the growth of this power lies the secret of the growth of *civilization*: and evidence abounds, that what we now discern of absolute or intuitive truth, is far from the measure of what may one day be *accessible*, without any transcendence of the sphere of Humanity. How vain then, how vainly audacious the attempt, through our present or realized insight, to reach the ultimate depths of Being! 2. To whatever extent we can discern the Absolute or Infinite, it clearly must be through reliance in the *first place* on those ultimate elements or constituents of human thought: and as well in logic, as in masonry, it were fatal to remove the foundation scaffolding, simply because we have ascended several stages above it. But, these philosophies of the absolute, destroy the foundation on which alone they can rest: the logical scheme of Hegel obliterates as entirely, human liberty, human personality, human morality in every one of its directest consequences, as the lowest materialistic systems. It is thus a practical paralogism, and issues in a defiance of that very *Cogito* of Des Cartes, to which at the outset it professes unquestioning allegiance. These irremediable defects inhere in most of our recent transcendental systems; which are liable, besides, to equally fatal specific objections. It is gratifying to know, that in Germany itself, they seem to have run their course; and that modern thinkers, with aspirations humbler but more real, are now working out the various invaluable hints which their founders have thrown, on themes sufficiently promising, such as the Philosophy of History. Hegel's works have been collected and published in a great many volumes by the most eminent of his disciples. [J.P.N.]

HELMONT, JEAN BAPTIST VAN, generally numbered among the alchemists, was a native of Brussels, and was born 1577. He was a public lecturer on medicine when only seventeen years of age, and at twenty-two received his diploma as a physician. Being rendered independent by his marriage with a lady of property in 1609, he displayed his benevolence by practising his profession gratuitously, and devoted his leisure to the studies of which his name has become such a famous representative. It is admitted that he was a great pioneer in chemical discovery, but there is also a fund of valuable truth under the obscure terms which are generally regarded as the mere conceits of his imagination. The *archeus*, for example, which makes a conspicuous figure in his works, is the mover of all the functions in the animal economy, and may be regarded as the vital aura which is the subject of so much popular curiosity, and the ridicule of so many learned professors, at the present day. It was from the *archeus* that Barthez derived his idea of a vital principle, and operated a revolution in physiology. The same element, or spiritual essence of life, is recognized by nearly all the old philosophers under different names, and there is now every prospect of its coming within the pale of experimental philosophy. Of course, it is not pretended to deny that Helmont's works abound in crude notions, and wild fantastic theories, but even in these cases the imaginative may often find the road to some true, and now forgotten principle, from which the author wandered away in the fire-mists with which he surrounded himself. Apart from all this, he was a perfect master of his art, and there is evidence of the astonishing cures he performed as a physician. He died in 1644, and in 1648 his collected works were published, according to his dying request, by his son, FRANCIS MERCURY VAN HELMONT, who was also a speculative writer, and lived 1618-1699. HELVETIUS. The physicians and philosophers of this name are sprung from a family of the Patinate, the first founders of which fled to Holland to avoid persecution at the period of the reformation.—1. JEAN FREDERIC, (SCHWEIZER), bears the reputation of an alchemist, was a physician to the armies of the republic, and several medals struck in honour of the service rendered by him, flourished 1625-1709.—2. ADRIAN, who carried the family name to Holland by going there in his youth, was the son of a preceding, and was known in the city of his adoption as the Dutch physician. He was ennobled by Louis XIV. for his services, having been successively equerry, counsellor of the king, and inspector-general of hospitals. He is the author of several medical works, especially on fevers, on plague, and on the extirpation of cancer, and the discoverer of the curative virtues of ipecacuanha. Some of his works went through several editions during his lifetime and afterwards; lived 1672.—One of his sons, 3. JEAN CLAUDE ADRIAN, became councillor of state and first physician to the queen, and was a member of most of the learned societies of Europe. His works are 'Idée Générale de l'Economie Animale, et Observations sur la Petite Vérole,' and 'Principes Physica-Medica,' in which he attributes all disease to the fermentation of the blood, and its irruption into the lymphatic vessels. Like the other members of his family, he was of an original and speculative turn, and his hypotheses generally provoked controversy. His son, the fourth and most famous of the name, is the subject of the following notice. [E.]

HELVETIUS, CLAUDE ADRIAN, born Paris 1715, died December, 1771. The celebrity at one time enjoyed by Helvetius, rests on his work *De l'Esprit*—a treatise on theoretical and practical morality. Starting from the ground that man is a being simply and purely *sensible*, he rapidly infers that morality signifies the search after pleasure and effort to avoid pain. Nevertheless, as remarked in the article EPICURUS, granting the position the inquiry remains, how can one best attain pleasure and avoid pain? And Helvetius desires to raise men to the pursuit of large objects, which contrasts with this view, the mean morality of purely self-seeking and vulgar-minded, with the higher but still narrow morality of sects and cries, and this last with the generous and unfeigned action and serene enjoyments of the man whose sympathies are coextensive with his race. It is to be said, in justice to one whose merits as a thinker are not great, but often unduly abused and depreciated, that *action* according to his precepts, would, by no means frequently, be found jar with the results of a better system. Helvetius was a good and keen observer: hence the saying of Madame du Deffand, 'C'est un homme qui a le secret de tout le monde.'—Besides his *Esprit* he wrote a treatise *De l'Homme*. They are 1 and wearisome in the main: and before recommending their perusal even to a student in the fullest leisure, it would be fair to say that everything good in them may be obtained at a much cheaper rate.  ELMANS, FELICIA, the daughter of a Livermore merchant, was born in that town in 1794. Browne wrote verses from her childhood, and published a poetical volume in her fourteenth year. Her second volume, containing poems on 'The Poetic Affections,' which appeared in 1812, found her as already successful in the school of Keats and Shelley. In the same year she married Captain Elms, who, after some years, went to reside on the continent, Mrs. Elmans remaining at home, with her five sons. Always devoted to study and composition, she now became more so than ever; it was matter of much regret, to the poetess as well as to the admirers of her verses, that she felt herself compelled, by the expenses attending the education of her children, to spend her powers in the most uninterrupted succession of small pieces, which usually made their first appearance in the periodicals of the day. It is hardly, indeed, to be believed, that, even with more favourable opportunities, she would have succeeded much better than she did in narrative or dramatic poetry. The character of her genius was decidedly lyrical and sensitive. But leisurely composition would doubtless have checked the verbosity and mannerism which are the besetting faults even of her latest best poems. As it is, there are not a few of small pieces which are alike fine in feeling and execution; and the very marked manner which gradually formed for herself has found a host of imitators. Her poems are admirable for purity of sentiment and gentle pathos; and her personal character was amiable, modest, and exemplary. After several changes of residence, she died in London in 1835. HENRIOT, FRANÇOIS. This audacious and bad man, who rose to be military commander of Paris during the reign of terror, was born in the precincts of the capital in 1761, and was released from prison, where he had been confined for theft, in the midst of the anarchy of 1792. He was a principal in the terrible scenes of August and September in that year, and headed the armed force of the sansculottes, or sections of Paris, in the insurrection of May in the year following, when the Girondins were overthrown. The triumph of Marat raised Henriot from this position to that of generalissimo of the national guard, yet he was utterly destitute of the talents necessary for command, as shown by his conduct on the 9th Thermidor, when Robespierre and his party were arrested by Barras. On this occasion he set the example of a retreat, and returning to the Hotel de Ville, in a half-drunken condition, he was hurled from a window, with imprecations, by one of his colleagues. The fall, however, did not kill him, and he was executed with Robespierre and the others on the day following, 28th July, 1794. [E.R.]

HENRY, MATTHEW, the celebrated con tator on the Bible, was a native of Flin where he was born at the farm-house of Oak, the dwelling of his maternal grandfat 1662. His parents had retired to that pl consequence of his father, Rev. Philip Henr ing been ejected from his parish in the neigh hood by the tyrannical act of uniformity. I of a very weakly and delicate constitution childhood. But his mental faculties wer markable for their precocious developmen vigour; and as an evidence of this, it is sai he could read the Bible distinctly in his thir and the Greek New Testament in his ninth a very early age he received deep and lastin pressions of religion; insomuch that when moved to a public academy at Islington, distinguished amongst his school-fellows not by the superiority of his classical and g learning, than by his settled piety. In 16 entered Gray's Inn as a student of law, no any view to the legal profession, but accord the fashion of the time, which considered branch of liberal education, and an excellen cipline for the youthful mind. But the b Henry's inclinations had been all along to the ministry, and by a prudent economy time, he pursued his theological studies, resident at that school of law. He began to at first in a room which his father had fit for public worship, and to which the people neighbourhood were in the habit of rep After a few of these private trials, he went visit to a friend at Nantwich, where he preache great acceptance; and the fame of his disc having spread, he was invited to Chester, he preached in the house of a merchant to a audience which formed the nucleus of his futu gregation. Such privacy was necessary at a when the law imposed great restriction on th dom of preaching. But in 1687, prudence cessity led the government to adopt a more policy, and license was granted to dissen preach. Mr. Henry having accepted a call dertake the functions of the ministerial of Chester, he was privately ordained, for the c ters wisely avoided in those days all ostent display; and he had not been long settled i town, when he drew around him a large flourishing congregation. The duties of a m

much more onerous than they are now; Mr. Henry found no difficulty in accomplishing all that was required: two long services of Sabbath, a discourse in the neighbouring villa—most every evening in the week, besides visits to the sick of his congregation, as well as to the prisoners in Chester jail. He continued twenty-five years pastor of that place, and during that period, he went through the Bible more than once in the course of expository lectures.—In 1712, he was translated to Hackney, London, and in a new sphere of ministerial labour, he determined to pursue the same course of exposition he adopted in Chester. At the commencement of his ministry, therefore, he began with the first chapter of Genesis in the forenoon, and the first chapter of Matthew in the afternoon. Thus gradually and steadily grew his 'Exposition' of the Bible.

A large portion of it consists of his public sermons, while many of the quaint sayings and remarks with which it abounds, and which give it so great a charm of raciness to its pages, were familiar extempore observations of his father in family worship, and noted down by Matthew in his boyhood.—Worn out by his excessive labours on the pulpit and the study, the constitution of Henry began to give way. On returning from a visit to his friends at Chester, the fatigue of travelling, increased by his corpulency, brought on an attack of paralysis, which laid him up at Nantwich, and in the triumphant exercise of faith and of this great and good man was removed from the world and the church below on 22d June, 1752, in the fifty-second year of his age. HERACLITUS, a celebrated Greek philosopher, lived in the 6th Olympiad, about 500 B.C.

The principle of his theory is the recognition of the fire of life, and the ethereal element of wisdom as the ground of all visible existences. Only fragments of his works have been preserved, which are written in the symbolic or transcendental manner of the Pythagoreans. [E.R.]

HERACLIUS, the first of the name emperor of the East, reigned 610-641; the second, HERACLIUS-CONSTANTINE, son of the preceding, survived only three months.

HERACLIUS, or EREKLI, king of Georgia, succeeded by right when an infant, on the death of his father, 1648, obtained the government about twenty years subsequently; died 1708. HERACLIUS, his grandson, b. about 1720, began his political career in 1747, and died after a long reign 1798.

HERAULD, DIDIER, a Fr. scholar, 1579-1649.

HERAULT-DE-SECHELLES, MARIE JEAN, the friend of Danton, was born at Paris, of a noble family, in 1760, and when the revolution broke out had arrived at the post of advocate-general in the parliament of the capital. Notwithstanding the favour he enjoyed at court, Hérault de Séchelles did not hesitate to join the popular party in the debates preceding 1789, and was present at the taking of the Bastille. In September, 1791, he was returned to the legislative assembly (the first biennial parliament) by the electors of Paris, and the year following represented the department of the Seine and Oise in the national convention. In each of these bodies he exercised great influence upon the direction of affairs, and when the constitution was accepted, he was made president of the national fête. For this post he was equally fitted by his eloquence as an orator, and the elegance of his person, for he was considered the handsomest man in France, but it was also the well-earned reward of his political honesty and patriotism. As events proceeded, the Committee of Public Safety was erected, and Hérault became a member of it, in which capacity he received a letter from Lavater, who had been acquainted with him, expressing the surprise of the philosopher 'That a man placed so high by his birth, his education, his talents, the goodness of his character, and the sweetness of his manners, should become the accomplice of scoundrels, so gross, so ignorant, and so stupid as his colleagues.' Hérault de Séchelles received this letter in committee, and smiling as he read it, observed to one of his companions, 'These people do not understand our situation!' On the division of parties, Hérault sided with his friend Danton, with whom he was guillotined, 5th April, 1794; his affianced bride, a young lady of high birth, and remarkable for her beauty, vainly endeavouring to move the heart of Robespierre. On the scaffold, Hérault de Séchelles stepped forward to embrace Danton, but the executioner prevented him, which gave occasion to the last words uttered by the great chief: 'Miserable! tu n'empêcheras pas nos têtes de se baisier dans le panier' (wretch! you cannot hinder our heads from kissing in the basket). Hérault de Séchelles is the author of several works, among others, of the 'Theory of Ambition,' published after his death, and of a work entitled 'Thoughts and Anecdotes.' [E.R.]

HERBART, J. F., a Ger. philosopher, b. 1776.

HERBELOW, BARTHOLOMEW D', professor of Syriac in the College of France, and author of 'Bibliothèque Orientale,' 4 vols. 4to, 1625-1695.

HERBERT, EDWARD, Lord Herbert of Chesham, a distinguished writer on natural religion, and the last of his age to embody the principle of deism in the language of a refined philosophy, was born of an ancient family at Montgomery castle in Wales 1581, and died in London 1633. He was one of the most accomplished gentlemen at the court of James I., and distinguished himself by his romantic bravery in the service of the prince of Orange, and at a later period in the parliamentary army. His greatest work, 'De Veritate,' was published at Paris, where he was resident ambassador, 1624, and for a time he hesitated whether to give it to the world. 'Being thus doubtful in my chamber,' he writes in his 'Memoirs,' 'one fair

day in summer, my casement being opened to the south, the sun shining clear, and no wind stirring, I took my book, *De Veritate*, in my hand, and kneeling on my knees, devoutly said these words:—O thou Eternal God, author of the light which now shines upon me, and giver of all inward illuminations, I do beseech thee, of thy infinite goodness, to pardon a greater request than a sinner ought to make. I am not satisfied enough whether I shall publish this book *De Veritate*. If it be for thy glory, I beseech thee give me some sign from heaven; if not, I shall suppress it. I had no sooner spoken these words, but a loud, though yet gentle noise came from the heavens (for it was like nothing on earth), which did so comfort and cheer me, that I took my petition as granted, and that I had the sign I demanded, whereupon also I resolved to print my book.' 'This,' he adds, 'how strange soever it may seem, I protest, before the Eternal God, is true; neither am I in any way superstitiously deceived herein, since I did not only clearly hear the noise, but in the serenest sky that ever I saw, being all without cloud, did, to my thinking, see the place from whence it came.' Some writers have accused Lord Herbert of hypocrisy, and others of vanity and self-delusion on this point, but, however extraordinary in a writer whose work was directed against belief in a revelation to a part of the world only, it is, to our mind, the highest proof of his sincerity. Besides this work, which was replied to by Gassendi, Lord Herbert is the author of Latin poems of great beauty, and of an Inquiry into the Errors of Paganism.—'De Religione Gentilium, &c.' He was a general favourite, both at the English and French courts, and perhaps indulged in an excusable vanity on that account, but his frankness, generosity, and bravery, besides his great literary abilities, are acknowledged by all parties.

[E.R.]
HERBERT, GEORGE, a younger brother of the preceding, is remarkable for the contrast exhibited by his life and character when compared with that of Lord Edward, in whose refinement of nature he shared most liberally. The tastes of George inclined him to the public life of a courtier, but he was educated for the church, and became rector of Bemerton, near Salisbury, where he settled down with a firm resolve to consecrate all his learning and all his abilities to advance the glory of that God which gave them; 'knowing,' he said, 'that I can never do too much for him that hath done so much for me *as to make me a Christian*.' George Herbert is remembered for the singular purity and beneficence of his secluded existence, and chiefly as the author of poems, often quoted for their earnest delineations of the soul's experience, and for the spirit of love and gentleness breathed into them. These simple, yet beautiful compositions are contained in his 'Remains,' together with 'The Country Parson's Character,' which exhibits his own rule of life, and is a picture of continued benevolence, and unwearied devotion to the service of others. He was born in 1593, and died of consumption in 1633. [E.R.]

HERMAS, ST., author of a book entitled 'The Pastor,' and supposed to be the same mentioned in ch. xvi. 14. The 'Pastor' of Hermas was highly esteemed by many of the early fathers, and Origen expresses his belief that it was divinely inspired. It contains an account of the visions of Hermas, only seen by him in a state of ecstasy, and to be understood in a symbolic sense: to which are added the excellent precepts of morality and piety, and 'Similitudes' or figures of truth. In the ninth of these similitudes an ancient white stone of immense magnitude is described, which had a new opening in it; and in the 'visions' Hermas relates that he saw six young men or angels building a tower of square white stones, symbolic of the Christian Church. This book is further interesting as affording evidence that the early Christians believed in the ministration of angels around men. [E.R.]

HERMES, or MERCURIUS, TRISMEGISTUS, a supposed priest and philosopher of Egypt, who is mentioned by Sanconiathe as the secretary and adviser of Cronus, and as the original author of 'Cosmogony.' Although it creates some inconsistencies, he is supposed to be the same as Athothis, the second king of Egypt, who, Manetho says, 'Built the palaces at Memphis, and left anatomical books, for he was a physician.' His supposition is founded on a passage in Sanconiathe's 'Generations,' where we read, 'From Athor (Mizraim) descended Taatus (or Athothis), who invented the writing of the first letters; him the Egyptians call Theoor, the Alexandrians Theoth, and the Greeks Hermes.' These points may be examined in the fragments of Cory. The works extant under the name of Hermes are, 'Theomander, or the Power and Wisdom of God;' 'Theophrastus, a Dialogue on the Deity, Mankind, and the World,' and some others supposed to be less antiquity than these, and all alike regarded as spurious. Their value, however, will be very great in any attempt to determine the history of philosophy. In all likelihood the name belongs to two distinct persons, the later of whom was an Egyptian philosopher and legislator, and the earlier a deification of all the ancient philosophy and instruction of that mysterious country. HERODOTUS. Very few facts connected with the biography of the 'Father of History' have come down to us. With the exception of the few data incidentally and indirectly supplied by himself, the notices of his life rest on comparatively recent or questionable authority. Herodotus was a native of Halicarnassus, a Dorian city in Asia Minor, was born B.C. 484, and was perhaps alive in the beginning of the following century. According to Suidas, his father was called Lyxas, and his mother Dryo, both descended from noble Halicarnassian families. Disgusted with the government of Lygdamis, the grandson of Artemisia, who was tyrant of his native city, he retired for a time to the island of Samos, whence he acquired the Ionic dialect, in which he afterwards composed his history. To collect the necessary materials for his great work, he entered, in early manhood, upon that course of patient and observant travel which was destined to render his name illustrious in all future ages. During his wanderings he visited almost every part of Greece and its dependencies, and many other countries, the affairs of which are treated in his work; investigating minutely the history, manners, and customs of the people. The shores of the Hellespont, Scythia, and the Euxine Sea; Syria, Palestine, Colchis, the northern parts of Africa, Ecbatana, and even Babylon, were the objects of his unwearied search. On his return from his travels he took a prominent part in delivering his country from the tyranny of Lygdamis. But the expulsion of the tyrant did not bring tranquillity to Halicarnassus; and Herodotus having himself become an object of dislike, again quitted his native city, and settled along with a colony from Athens, at Thurii, in the south of Italy, B.C. 443. Here he spent the remainder of his life, and here he wrote the work which has immortalized his name. The time and place of his death are matters of dispute. According to some he died at Thurii, and was buried in the market-place; while others assert that he died at Pella, in Macedonia. His history consists of nine books, which bear the names of the nine Muses. 'Next to the Iliad and Odyssey,' says Colonel Mure, 'the history of Herodotus is the greatest effort of Greek literary genius. The one is the perfection of epic poetry, the other the perfection of epic prose. Were it not for the influence which

the prior existence of so noble a model, even in a different branch of composition, has evidently exercised on the historian, his title to the palm of original invention might rival that of his poetical predecessor. In the complexity of the plan (of his history), as compared with the simplicity of its execution; in the multiplicity and heterogeneous nature of its materials, and in the harmony of their combination; in the grandeur of its historical masses, and the minuteness, often triviality, of its illustrative details; it remains not only without equal, but without rival or parallel in the literature of Greece or of Europe. HERRICK, HEARICK, or HIRECK, ROBERT, an English clergyman and poet, descended from Eric, a Danish chief subdued by Alfred the Great, and settled with his people in East Anglia, and intermediately from a well-known family in Leicestershire, was born 24th August, 1591. His uncle, Sir W. Heyrick, undertook the charge of his education at Cambridge, and having friends at court, he was presented to the living of Dean Prior in Devonshire, 1629. In 1648, he was deprived by Cromwell, and coming to London, assumed the lay habit, and in the course of the same year published his poems under the title of 'Hesperides, or the works, both Humane and Divine, of Robert Herrick, Esq.,' another collection in the same volume being styled 'His Noble Numbers, or his pious pieces, wherein (amongst other things), he sings the Birth of his Christ; and Sighees for his Saviour's Suffering on the Crosse.' The poems of Herrick were well received at the time, but were almost forgotten again till the time of Dr. Drake. They are now recognized as genuine effusions of the English muse, and the best of them are unsurpassed in melody, sweetness, and variety of rhythm, by any similar compositions in the English language. They afford admirable illustrations of old English manners, English feelings, and English scenery, and a noble strain of piety breathes through the whole volume, notwithstanding its frequent licentiousness. Herrick himself was painfully conscious of these blemishes, but the poor royalist, wanting his 'fifths,' and cast upon the streets of London, should not be too harshly censured for a fault to which Shakespeare himself was not superior. Being a bachelor, he had no home in the metropolis, and his best hours were given to the wits and courtiers of the period. Selden, Ben Jonson, Denham, Cotton, and Endymen Porter were among his friends. The date of his death is not known, but it was probably soon after 1660, when he was restored to his living by Charles II. 'A Genealogical Register of the name and family of Herrick,' was published by Jedediah Herrick, at Bangor, U.S., in 1846.
